<b>RESPONSE—SPECIFIC INSTRUCTIONS</b>
<ul style="list-style-type: none"> <li>• If the patient uses oxygen continuously, select the response based on assessment of the patient's shortness of breath while using oxygen. If the patient uses oxygen intermittently, mark the response based on the patient's shortness of breath WITHOUT the use of oxygen.</li> <li>• The responses represent increasing severity of shortness of breath.</li> <li>• For a chairfast or bedbound patient, evaluate the level of exertion required to produce shortness of breath. The chairfast patient can be assessed for level of dyspnea while performing ADLs or at rest. Response 0 would apply if the patient has not been short of breath during the day of assessment. Response 1 would be appropriate if demanding bed-mobility activities produce dyspnea in the bedbound patient (or physically demanding transfer activities produce dyspnea in the chairfast patient). See Responses 2, 3, and 4 for assessment examples for these patients as well as ambulatory patients.</li> </ul>
