Creation	<p>Definition: Making a new genital structure that does not take over the function of a body part</p> <p>Explanation: Used only for sex change operations</p> <p>Includes/Examples: Creation of vagina in a male, creation of penis in a female</p>
Destruction	<p>Definition: Physical eradication of all or a portion of a body part by the direct use of energy, force, or a destructive agent</p> <p>Explanation: None of the body part is physically taken out</p> <p>Includes/Examples: Fulguration of rectal polyp, cautery of skin lesion</p>
Detachment	<p>Definition: Cutting off all or a portion of the upper or lower extremities</p> <p>Explanation: The body part value is the site of the detachment, with a qualifier if applicable to further specify the level where the extremity was detached</p> <p>Includes/Examples: Below knee amputation, disarticulation of shoulder</p>
Dilation	<p>Definition: Expanding an orifice or the lumen of a tubular body part</p> <p>Explanation: The orifice can be a natural orifice or an artificially created orifice. Accomplished by stretching a tubular body part using intraluminal pressure or by cutting part of the orifice or wall of the tubular body part</p> <p>Includes/Examples: Percutaneous transluminal angioplasty, pyloromyotomy</p>

Division	<p>Definition: Cutting into a body part, without draining fluids and/or gases from the body part, in order to separate or transect a body part</p> <p>Explanation: All or a portion of the body part is separated into two or more portions</p> <p>Includes/Examples: Spinal cordotomy, osteotomy</p>
Drainage	<p>Definition: Taking or letting out fluids and/or gases from a body part</p> <p>Explanation: The qualifier DIAGNOSTIC is used to identify drainage procedures that are biopsies</p> <p>Includes/Examples: Thoracentesis, incision and drainage</p>
Excision	<p>Definition: Cutting out or off, without replacement, a portion of a body part</p> <p>Explanation: The qualifier DIAGNOSTIC is used to identify excision procedures that are biopsies</p> <p>Includes/Examples: Partial nephrectomy, liver biopsy</p>
Extirpation	<p>Definition: Taking or cutting out solid matter from a body part</p> <p>Explanation: The solid matter may be an abnormal byproduct of a biological function or a foreign body; it may be imbedded in a body part or in the lumen of a tubular body part. The solid matter may or may not have been previously broken into pieces</p> <p>Includes/Examples: Thrombectomy, choledocholithotomy</p>
Extraction	<p>Definition: Pulling or stripping out or off all or a portion of a body part by the use of force</p> <p>Explanation: The qualifier DIAGNOSTIC is used to identify extraction procedures that are biopsies</p> <p>Includes/Examples: Dilation and curettage, vein stripping</p>

Fragmentation	<p>Definition: Breaking solid matter in a body part into pieces</p> <p>Explanation: Physical force (e.g., manual, ultrasonic) applied directly or indirectly is used to break the solid matter into pieces. The solid matter may be an abnormal byproduct of a biological function or a foreign body. The pieces of solid matter are not taken out</p> <p>Includes/Examples: Extracorporeal shockwave lithotripsy, transurethral lithotripsy</p>
Fusion	<p>Definition: Joining together portions of an articular body part rendering the articular body part immobile</p> <p>Explanation: The body part is joined together by fixation device, bone graft, or other means</p> <p>Includes/Examples: Spinal fusion, ankle arthrodesis</p>
