

CMS Physician Quality Reporting Initiative (PQRI)

File Notification for .CSV Version of 2010 PQRI Single Source Code Master

CMS has two versions of the *2010 PQRI Single Source Code Master* available for use, one in Microsoft® Excel (CMS recommends) and a second version in .csv.

Regarding posted document (2010_PQRI_SingleSource_PUBLIC_Codemaster_012810_FINAL.csv) on CMS PQRI website:

- Viewing the .csv file in Microsoft® Excel may result in features that are not compatible with .csv.
- For example, the .csv version of the *2010 PQRI Single Source Code Master* may truncate numeric values in codes, therefore causing discrepancies from the original Microsoft® Excel version (i.e., diagnosis code 250.00 may appear as 250).
- To ensure correct codes are displayed, compare data in the .csv version to the posted Microsoft® Excel version (2010_PQRI_SingleSource_PUBLIC_Codemaster_012810_FINAL.xlsx).
