

# Stage 2 Eligible Professional Meaningful Use Core Measures Measure 14 of 17

Date issued: October, 2012

Medication Reconciliation	
<b>Objective</b>	The EP who receives a patient from another setting of care or provider of care or believes an encounter is relevant should perform medication reconciliation.
<b>Measure</b>	The EP who performs medication reconciliation for more than 50 percent of transitions of care in which the patient is transitioned into the care of the EP.
<b>Exclusion</b>	Any EP who was not the recipient of any transitions of care during the EHR reporting period.

## Table of Contents

- Definition of Terms
- Attestation Requirements
- Additional Information
- Certification and Standards Criteria

## Definition of Terms

**Medication Reconciliation** – The process of identifying the most accurate list of all medications that the patient is taking, including name, dosage, frequency, and route, by comparing the medical record to an external list of medications obtained from a patient, hospital, or other provider.

**Relevant Encounter** – An encounter during which the EP performs a medication reconciliation due to new medication or long gaps in time between patient encounters or for other reasons determined appropriate by the EP. Essentially an encounter is relevant if the EP judges it to be so. (Note: Relevant encounters are not included in the numerator and denominator of the measure for this objective.)

**Transition of Care** – The movement of a patient from one clinical setting (inpatient, outpatient, physician office, home health, rehab, long-term care facility, etc.) to another or from one EP to another. At a minimum, transitions of care include first encounters with a new patient and encounters with existing patients where a summary of care record (of any type) is provided to the receiving provider. The summary of care record can be provided either by the patient or by the referring/transiting provider or institution.

## Attestation Requirements

### DENOMINATOR/NUMERATOR/THRESHOLD/EXCLUSION

- **DENOMINATOR:** Number of transitions of care during the EHR reporting period for which the EP was the receiving party of the transition.
- **NUMERATOR:** The number of transitions of care in the denominator where medication reconciliation was performed.

- **THRESHOLD:** The resulting percentage must be more than 50 percent in order for an EP to meet this measure.
- **EXCLUSION:** Any EP who was not the recipient of any transitions of care during the EHR reporting period.

### Additional Information

- Only patients whose records are maintained using certified EHR technology must be included in the denominator for transitions of care.
- In the case of reconciliation following transition of care, the receiving EP should conduct the medication reconciliation.
- The electronic exchange of information is not a requirement for medication reconciliation.
- The measure of this objective does not dictate what information must be included in medication reconciliation. Information included in the process of medication reconciliation is appropriately determined by the provider and patient.
- In order to meet this objective and measure the EP must use the capabilities and standards of CEHRT at 45 CFR 170.314(b)(4), (g)(1), and (g)(2).

### Certification and Standards Criteria

Below is the corresponding certification and standards criteria for electronic health record technology that supports achieving the meaningful use of this objective.

Certification Criteria*	
<b>§ 170.314 (b)(4) Clinical Information Reconciliation</b>	Enable a user to electronically reconcile the data that represent a patient’s active medication, problem, and medication allergy list as follows. For each list type: <ul style="list-style-type: none"> <li>(i) Electronically and simultaneously display (i.e., in a single view) the data from at least two list sources in a manner that allows a user to view the data and their attributes, which must include, at a minimum, the source and last modification date.</li> <li>(ii) Enable a user to create a single reconciled list of medications, medication allergies, or problems.</li> <li>(iii) Enable a user to review and validate the accuracy of a final set of data and, upon a user’s confirmation, automatically update the list.</li> </ul>

*\*Depending on the type of certification issued to the EHR technology, it will also have been certified to the certification criterion adopted at 45 CFR 170.314 (g)(1), (g)(2), or both, in order to assist in the calculation of this meaningful use measure.*
