Pub 100-20 One-Time Notification	Centers for Medicare & Medicaid Services (CMS)
Transmittal 605	Date: November 27, 2009
	Change Request 6676

SUBJECT: Implementation of the Updated Health Insurance Portability and Accountability Act (HIPAA) 005010 837 Institutional (837I) Edits and 005010 837 Professional (837P) Edits

I. SUMMARY OF CHANGES: The purpose of this Change Request (CR) is to provide updated edits spreadsheets to specific Part A and Part B (A/B) MACs which are, as of this time, in a position to implement 005010, specifically the following Jurisdictions: J1, J3, J4, J5, J10, J11, J12, J13, and J14, as well as the Common Electronic Data Interchange (CEDI) contractor. Other MACs, not currently in a position to implement 005010, shall provide level of effort estimates only if they will be in a position to become 5010 operational prior to the effective date of this CR. A/B MACs currently in Corrective Action Plan (CAP) or under a protest condition need not reply to this CR at this time. A future CR will address these MAC jurisdictions. Additionally, this CR directs Shared Systems and CEDI to implement the Common Edits Module (CEM) which will reside at the Local Data Center via the attached updated edits spreadsheets.

SECTION B: For Medicare Administrative Contractors (MACs):

The Medicare Administrative Contractor is hereby advised that this constitutes technical direction as defined in your contract. CMS does not construe this as a change to the MAC Statement of Work. The contractor is not obligated to incur costs in excess of the amounts allotted in your contract unless and until specifically authorized by the Contracting Officer. If the contractor considers anything provided, as described above, to be outside the current scope of work, the contractor shall withhold performance on the part(s) in question and immediately notify the Contracting Officer, in writing or by e-mail, and request formal directions

regarding continued performance requirements.

Pub. 100-20 Transmittal: 605 Date: November 27, 2009 Change Request: 6676

SUBJECT: Implementation of the Updated Health Insurance Portability and Accountability Act (HIPAA) 005010 837 Institutional (837I) Edits and 005010 837 Professional (837P) Edits

Effective Date: April 1, 2010

Implementation Date: April 5, 2010

I. GENERAL INFORMATION

A. Background: The purpose of this CR is to provide updated edits spreadsheets to specific Part A and Part B (A/B) MACs which are, as of this time, in a position to implement 005010, specifically the following Jurisdictions: J1, J3, J4, J5, J10, J11, J12, J13, and J14, as well as the Common Electronic Data Interchange (CEDI) contractor. Other MACs, not currently in a position to implement 005010, shall provide level of effort estimates only if they will be in a position to become 5010 operational prior to the effective date of this CR. A/B MACs currently in Corrective Action Plan (CAP) or under a protest condition need not reply to this CR at this time. A future CR will address these MAC jurisdictions. Additionally, this CR directs Shared Systems and CEDI to implement the Common Edits Module (CEM) which will reside at the Local Data Center via the attached updated edits spreadsheets.

Contractors and shared systems maintainers shall use the attached edits spreadsheets as replacements for the original edits spreadsheets distributed with CRs 6475, 6476, 6610, and 6611 to complete their January 2010 and April 2010 deliverables (business requirements). Contractors are not required to replicate work already done, but are only expected to use the updates to the spreadsheets to build upon their core deliverables from the above listed change requests.

Estimates for this CR should include a breakdown as part of the Level of Effort (LOE) response, utilizing the following table to be included in the "Estimate-Specific Comments" portion of the LOE template, to follow the Investment Lifecycle Phases.

Investment Lifecycle Phase	Total Hours	Total Cost
Pre-Implementation/CR Review		
Design & Engineering Phase		
Development Phase		
Testing Phase		
Implementation Phase		

Note that the Pre-Implementation/CR Review costs will not be funded under the unique funding situation for the 5010/D.0 project, but instead out of the MAC's pot of hours for Pre-Implementation/CR Review.

The X12 TA1 Interchange Acknowledgment reports the status of the processing of an interchange header and trailer by the address receiver.

The ASC X12 999 Implementation Acknowledgment For Health Care Insurance reports the syntactical and relational analysis of an implementation guideline (TR3), or acknowledges receipt of an error-free transaction set. The attached October 2009 spreadsheets describe the implementation of the 999 by identifying which 999 errors will be accepted via the "Accepted with Errors" 999 and identifying which 999 errors will be rejected via the "Rejected" 999. The "Accepted with Errors" 999 allows for an entire batch of claims not to be rejected

because one or a few claims have syntax errors. Note that under this scenario, any claim that is accepted with a syntax error will be rejected in the CEM.

The attached edits spreadsheets also describe the ASC X12 005010X214 277 Health Care Claim Acknowledgment (277CA) edits used to report the data content status of claim submission transactions (837s). For all edits labeled 277CA, CMS has identified the Claim Status Codes and Claim Status Category Codes to be used when generating either the STC error handling segments or the 277CA flat file. CMS has also identified the need for several new Claim Status Codes to be created by X12, and CMS is currently in the process of requesting those new codes. The spreadsheets also include a column to number the edits (described in a spreadsheet tab) as well as a notation of which 277CAs are generated by the translator, denoted by "T", and which 277CAs are generated by the CEM, denoted by a "C".

CMS expects to implement ASC X12 version 005010 transaction over multiple releases. The intent is for CMS to be ready to exchange ASC X12 version 005010 transactions after December 31, 2010. During the transition period, CMS expects to exchange HIPAA test and production transactions in both 004010A1 and 005010 versions.

B. Policy: The Administrative Simplification provisions of HIPAA require the Secretary of DHHS to adopt standard electronic transactions and code sets for administrative health care transactions. The Secretary may also modify these standards periodically.

The attached version 3 of the 837i and 837p edits spreadsheets are a result of an extensive line-by-line comparison made across the institutional and professional transaction spreadsheets. The primary result of the line-by-line comparison was a synchronization of edit disposition and error reporting between the 837i and 837p. When identified, synchronization within line of business was also done. However, we recognize that there are issues that still need to be addressed. Those issues will be addressed in future versions.

NOTE: The synchronization and line-by-line review may have resulted in deleted and/or re-numbered element identifier rows. Contractors will find that the list of changes have been noted in the change log. Contractors should review all changes, but should pay special attention to the following:

NM108 edits;

2320 CAS and 2430 CAS edits;

Global changes to replace many TBD's with actual CSC codes.

Version 3 will become the "BASE" document of which all future modifications will result in edit row additions and/or deactivations of existing element identifier rows. Deactivated edit rows will no longer be deleted from the spreadsheet, but will be identified as deactivated or they will be hidden.

Style Sheet Style Sheet

	Assumptions							
	Commercial EDI Translators will perform the following editing / validation of ED	OI submissions:						
	 EDI syntax integrity validation Valid Segments (e.g. valid segment identifier, number of elements, delimiters) Segment order (as defined by the X12 / NCPDP standard) Element Attributes (e.g. X12 usage, repetitions, data type, and min/max size) Numeric element validation (e.g. leading minus signs, decimal points for R data types) X12 / NCPDP syntatical rules 							
1	HIPAA syntax integrity validation based upon adopted specifications (X1 1. Repeat maximums for segments, loops, elements (when repeating elements. Used and un-used qualifiers, (internal) codes, elements, and segments 3. Intra-segment situational data elements (e.g. DTP for auto accident becons THIS DOES NOT INCLUDE VALIDATION OF EXTERNAL CODE SOURCE Commercial EDI translators must refer to the Edits Spreadsheet to determine If no reference is found in the Edits Spreadsheet for the compliance error the should be tracked for potential inclusion within the Edits Spreadsheet.	mes required when CLM011-1 or CLM11-2 is "AA" or "OA") is (to be validated in the CEM). what action to take relative to syntax integrity compliance errors.						
2	Numeric and Decimal Data Type Elements In the definition of the transaction flat file, each numeric or decimal data type of X(18)) and a redefined numeric picture clause (e.g. PIC S9(8)V99). If the numeric pictuse a filler field will be used to fill the balance of the field length. Commercial EDI Translators will initialize the alphanumeric picture clause with decimal data elements the flat file field will be zero fill and justify the numeric vidoing so the CEM will be able to determine if the data element was not present (zero filled). e.g. CLM02 Total Submitted Charges O5 CLM02-TOTAL-SUBMITTED-CHARGES-GROUP O5 CLM02-TOTAL-SUBMITTED-CHARGES-REDEF REDEFINES CLM02-TOTAL CLM02-TOTAL-SUBMITTED-CHARGES 10 CLM02-TOTAL-SUBMITTED-CHARGES-FILLER	neric picture clause is shorter than the alphanumeric picture is spaces in the flat file. During EDI translation of numeric or value appropriately for the associated numeric picture clause. By it (space filled) or when it was present with the correct value PIC X(18).						

	The Edit Identifier consists of the following fields seperated by periods.
3	TR3 Identifier TR3 Page reference for the segment identified TR3 Loop ID (if there is no loop ID there will be two periods together) Segment ID and Element Position Edit Number (wihin the Segment ID / Element Position)
4	The Accept / Reject column can contain one of four values: for 999 (Implementation Acknowledgements) R - Reject will cause the transaction set (ST-SE) to be rejected back to the submitter E - Accept for further processing will cause the transaction set (ST-SE) to be passed on to the CEM where additional validation can occur and reject indivual claims for both syntax and business reasons. NOTE: If the 999E is for usage of a "Not Used" element only a 999E will be generated and sent back to the submitter. No corresponding 277 will be created in the flat file for this type of error. For 277 (Implementation Acknowledgements) T - The error is identified in the translator and a STC records is added to the 837 flat file following the segment that had the error C - The error will be identified in the CEM where the 277CA flat file will be generated and include the business error found.
100	If a segment/element/composite is required, based on either guide usage or by situational rule interpretation, there will be an edit that indicates it must be present. If a segment/element/composite is not used, based on either guide usage or by situational rule interpretation, there will be an edit that indicates that it must not be present. If a segment/element/composite does not have either of those explicit notations, the edits listed will apply when the segment/element/component is present.
101	Any numeric value with an edit that indicates it must be >= 0 means that negative numbers are not allowed. Any numeric value with an edit that indicates it must be > 0 means that neither zero nor negative numbers are allowed. If neither of these explicit edit are present, negative, zero, and positive numbers are allowed.
102	If a segment is repeated at the same location with different qualifiers, the segment edit will include a qualifier clause (Only one iteration of 2300.HI with HI01-1 = "DR" is allowed), otherwise the segment edit will just include the number of iterations allowed (Only one iteration of 2310C.NM1 is allowed).
103	The Front End translators will determine billing criteria (inpatient, outpatient, POA, etc.) based on the NUBC manual. Specific criteria will not be included in this document.
104	The 999 will be used whenever possible; the 277 will be used when there is no 999 error code and for external code set messages.
105	When CMS does not use a segment for internal processing the spreadsheet will include basic syntax edit and the segment will be processed as "store and forward", except for the Patient Level loop. A submission that includes the Patient Level loop will be rejected at the translator level.

106	Conditional statements regarding inclusion or exclusion of segment/element/composites will be included when they can be consistently enforced by a trasaction receiver. In the absence of a consistently enforceable critera, no edit will be included to control inclusion/exclusion.
107	If the data for an AN element/composite is from an external code list, the standard AN edits will not be included.
108	Format definitions, rules, restrictions, guidance, or instructions published by the code set owner of an external code set must be met for a code from an external code set to be noted as "valid".
109	Valid dates - dates must be valid according to the calendar for the specific year. Only 01 - 12 are valid for the month positions of the date field. If month is "01", the day positions may be populated with 01 - 31. If month is "02", the day positions may be populated with 01 - 28, except
110	Edits restricting a date field from being a "future date" should be evaluated against the date the file was received.
111	The words "digit" or "digits" in an edit implies numeric content. The words "character" or "characters" in an edit implies alphanumeric content. 12/11/2008
112	If an edit references a numeric value (must be >=, <= or = with a numeric limitation) implies a numeric content requirement so the standard numeric check will not be included.
113	Edits that are specific to the period when ICD-9 is allowed are highlighted in pink. Edits that are specific to the period when ICD-10 is allowed are highlighted in turquoise.
114	Segments noted as "Pass through, syntax only" will not include CMS specific edits based on system constraints or business rules. This notation indicates that the information is stored on the repository but not used in any CMS system processing.
115	In most cases, these edits are intended to clarify the X12N Implementation Guide instructions or add Medicare specific requirements. Unless otherwise explicitly specified in the EDITS worksheet, all X12N IG instructions must be followed.

	Style Sheet
	Assumptions
	Commercial EDI Translators will perform the following editing / validation of EDI submissions:
	EDI syntax integrity validation 1. Valid Segments (e.g. valid segment identifier, number of elements, delimiters) 2. Segment order (as defined by the X12 / NCPDP standard) 3. Element Attributes (e.g. X12 usage, repetitions, data type, and min/max size) 4. Numeric element validation (e.g. leading minus signs, decimal points for R data types) 5. X12 / NCPDP syntatical rules
1	HIPAA syntax integrity validation based upon adopted specifications (X12 / NCPDP) 1. Repeat maximums for segments, loops, elements (when repeating element are used) 2. Used and un-used qualifiers, (internal) codes, elements, and segments 3. Intra-segment situational data elements (e.g. DTP for auto accident becomes required when CLM011-1 or CLM11-2 is "AA" or "OA") THIS DOES NOT INCLUDE VALIDATION OF EXTERNAL CODE SOURCES (to be validated in the CEM). Commercial EDI translators must refer to the Edits Spreadsheet to determine what action to take relative to syntax integrity compliance errors. If no reference is found in the Edits Spreadsheet for the compliance error the transaction set should be rejected with a 999R. These rejections should be tracked for potential inclusion within the Edits Spreadsheet.
	Numeric and Decimal Data Type Elements
	In the definition of the transaction flat file, each numeric or decimal data type element will have both an alphanumeric picture clause (e.g. PIC X(18)) and a redefined numeric picture clause (e.g. PIC S9(8)V99). If the numeric picture clause is shorter than the alphanumeric picture clause a filler field will be used to fill the balance of the field length. Commercial EDI Translators will initialize the alphanumeric picture clause with spaces in the flat file. During EDI translation of numeric or
2	decimal data elements the flat file field will be zero fill and justify the numeric value appropriately for the associated numeric picture clause. By doing so the CEM will be able to determine if the data element was not present (space filled) or when it was present with the correct value (zero filled).
	e.g. CLM02 Total Submitted Charges
	05 CLM02-TOTAL-SUBMITTED-CHARGES-GROUP PIC X(18).
	05 CLM02-TOTAL-SUBMITTED-CHARGES-REDEF REDEFINES CLM02-TOTAL-SUBMITTED-CHARGES-GROUP. 10 CLM02-TOTAL-SUBMITTED-CHARGES PIC S9(8)V99. 10 CLM02-TOTAL-SUBMITTED-CHARGES-FILLER PIC X(8).
	The Edit Identifier consists of the following fields seperated by periods.
3	TR3 Identifier TR3 Page reference for the segment identified TR3 Loop ID (if there is no loop ID there will be two periods together) Segment ID and Element Position Edit Number (wihin the Segment ID / Element Position)

	The Accept / Reject column can contain one of four values:
4	for 999 (Implementation Acknowledgements) R - Reject will cause the transaction set (ST-SE) to be rejected back to the submitter E - Accept for further processing will cause the transaction set (ST-SE) to be passed on to the CEM where additional validation can occur and reject indivual claims for both syntax and business reasons. **NOTE:* If the 999E is for usage of a "Not Used" element only a 999E will be generated and sent back to the submitter. No corresponding 277 will be created in the flat file for this type of error. For 277 (Implementation Acknowledgements) T - The error is identified in the translator and a STC records is added to the 837 flat file following the segment that had the error
100	C - The error will be identified in the CEM where the 277CA flat file will be generated and include the business error found. If a segment/element/composite is required, based on either guide usage or by situational rule interpretation, there will be an edit that indicates it must be present. If a segment/element/composite is not used, based on either guide usage or by situational rule interpretation, there will be
	an edit that indicates that it must not be present. If a segment/element/composite does not have either of those explicit notations, the edits listed will apply when the segment/element/component is present.
101	Any numeric value with an edit that indicates it must be >= 0 means that negative numbers are not allowed. Any numeric value with an edit that indicates it must be > 0 means that neither zero nor negative numbers are allowed. If neither of these explicit edit are present, negative, zero, and positive numbers are allowed.
102	If a segment is repeated at the same location with different qualifiers, the segment edit will include a qualifier clause (Only one iteration of 2300.HI with HI01-1 = "DR" is allowed), otherwise the segment edit will just include the number of iterations allowed (Only one iteration of 2310C.NM1 is allowed).
103	The Front End translators will determine billing criteria (inpatient, outpatient, POA, etc.) based on the NUBC manual. Specific criteria will not be included in this document.
104	The 999 will be used whenever possible; the 277 will be used when there is no 999 error code and for external code set messages.
105	When CMS does not use a segment for internal processing the spreadsheet will include basic syntax edit and the segment will be processed as "store and forward", except for the Patient Level loop. A submission that includes the Patient Level loop will be rejected at the translator level.
106	Conditional statements regarding inclusion or exclusion of segment/element/composites will be included when they can be consistently enforced by a trasaction receiver. In the absence of a consistently enforceable critera, no edit will be included to control inclusion/exclusion.
107	If the data for an AN element/composite is from an external code list, the standard AN edits will not be included.
108	Format definitions, rules, restrictions, guidance, or instructions published by the code set owner of an external code set must be met for a code from an external code set to be noted as "valid".
109	Valid dates - dates must be valid according to the calendar for the specific year. Only 01 - 12 are valid for the month positions of the date field. If month is "01", the day positions may be populated with 01 - 31. If month is "02", the day positions may be populated with 01 - 28, except during leap years (2008 was a leap year, leap years occur every 4 years) when the day positions may be populated with 01 - 29. If month is "03", the day positions may be populated with 01 - 31. If month is "04", the day positions may be populated with 01 - 30. 110	Edits restricting a date field from being a "future date" should be evaluated against the date the file was received.

111	The words "digit" or "digits" in an edit implies numeric content. The words "character" or "characters" in an edit implies alphanumeric content. 12/11/2008
112	If an edit references a numeric value (must be >=, <= or = with a numeric limitation) implies a numeric content requirement so the standard numeric check will not be included.
