

## HEDIS 2014 - Comparison of Dual-Eligible Medicaid/Medicare and non-Dual-Eligible Members in Five-Star Quality Ratings Measures

The following tables present, for 2015 Medicare Five-Star Quality Ratings Measures, the Medicare HEDIS 2014 results of health plan members with eligibility in Medicaid and Medicare in December 2013 compared with the results of members eligible for Medicare only in December 2013. The health plan's official overall Medicare HEDIS 2014 scores are also provided for comparison. The following measures represent the results among 7,127 dual-eligible members and 6,381 non-dual-eligible members. The results of the Z-Test for Proportions, at the .05 alpha level, are also provided to determine whether there is a significant difference in HEDIS rates between the dual-eligible and non-dual-eligible populations. Star ratings for each measure are per the cut points in the CMS Medicare 2015 Part C & D Technical Notes updated 9/3/2014, available on the CMS web site (<http://www.cms.gov/Medicare/Prescription-Drug-Coverage/PrescriptionDrugCovGenIn/Downloads/2015StarRatingsTechnicalNotes.pdf>).
