National Clinical Trial (NCT) Identifier Number

- The NCT identifier number is assigned by the National Library of Medicine (NLM) at <http://clinicaltrials.gov/> website when a new study appears in the NLM Clinical Trials data base.
- This number is listed prominently on each specific study's page and is always preceded by the letters 'NCT'.
- CMS uses the NCT number to identify all items and services provided to beneficiaries during their participation in a clinical trial, clinical study, or registry.

NCT Identifier Number

- The NCT identifier number allows CMS to:
 - Track Medicare payments,
 - Ensure that the information gained from the research is used to inform coverage decisions, and,
 - Make certain that the research focuses on issues of importance to the Medicare population.

Optional Directions for Reporting NCT Identifier Number

- For those CMS stakeholders who do not have the capacity at this time to report the NCT identifier number, a generic, 8-digit number 99999999 may be reported instead.
 - Instructions provided in CR8401 would continue to apply for entering the optional, generic number effective 1/1/14 – 1/1/15.
 - The designated fields may not be left blank or the claim will be returned.
 - This in no way precludes those already reporting and/or able to report the actual 8-digit NCT identifier number from doing so.
