

CMS Use of S&P, MOC, and HEDIS Measures Data

Use of Data for Public Information

Susan Radke

MCAG, Division of Policy, Analysis, and Planning

January 13, 2014

Presentation Objectives

Describe how CMS will use the following information:

- MOC Results Data
 - Structure & Process Measure Results
 - HEDIS Measure Results
-
- Present Plans for Public Reporting

Model of Care (MOC)

Results of MOC reviews inform CMS:

- **How** the SNP will identify and address the needs of all SNP beneficiaries and those that are most vulnerable/frail
- **How** the SNP needs to improve its understanding and delivery of their MOC based on the MOC review
- **How** the SNP will implement its MOC

Structure & Process Measures

Purpose of Structure & Process Measures (S&P)

- To assess internal SNP process and operations that support and affect the quality of care provided by SNPs
- Focuses on systems necessary for quality care
 - Policies & procedures, reports, materials
- Tells CMS how SNPs *implement* their Quality Improvement Program Plans and Models of Care
- Tells CMS how SNPs fare relative to SNPs of same type
- However, S&P measures do not tell CMS **how well** SNPs implement their Quality Improvement Program and MOCs.

HEDIS Measures

- Data used to measure SNP performance on important dimensions of care and service
- HEDIS measures make it possible to compare the performance of SNPs in specified areas
- Data used in the development of Star Ratings

Public Reporting

In response to inquiries from government oversight agencies, beneficiary advocates, and other stakeholders, CMS will:

- Prepare summaries of SNPs' MOCs and post on the CMS website (refer to HPMS memo dated 9/30/2013 regarding this process).
- Post the S&P (2010, 2011, 2012) and most recent HEDIS Measures Reports on the CMS website
- Release is expected the first quarter in CY 2014
- Detailed information is forthcoming
