2006 - 2007 INFLUENZA (FLU) SEASON RESOURCES FOR HEALTH CARE PROFESSIONALS

Key Words

SE0667, Influenza, Flu

Provider Types Affected

All Medicare fee-for-service (FFS) physicians, non-physician practitioners, providers, suppliers, and other health care professionals who bill Medicare carriers/Medicare Administrative Contractors (MAC) or fiscal intermediaries (FI) for flu vaccines and vaccine administration provided to Medicare beneficiaries.

Key Points

- On average, 36,000 people in the United States die each year from influenza and complications arising from influenza.
- Greater than 90% of deaths occur in persons 65 years of age and older.
- Individuals with chronic medical conditions such as diabetes and heart disease are particularly at risk of influenza infection, as are people in nursing, convalescent, or other institutional settings.
- The Centers for Medicare & Medicaid Services (CMS) needs providers' help to ensure that Medicare beneficiaries are informed about this vaccine-preventable disease and get their flu shot this flu season.
- **Medicare provides coverage of the flu vaccine without any out-of-pocket costs to the Medicare patient. No deductible or copayment/coinsurance applies.**
- Unvaccinated health care workers can spread influenza to patients, family, and friends. CMS encourages providers and their staff to get vaccinated.
- CMS has developed a variety of educational resources to ensure that Medicare FFS health care professionals have the information they need to bill Medicare correctly for the Medicare-covered vaccines and help promote increased awareness and utilization of the flu vaccine among beneficiaries, providers, and their staff.

- The following products have been developed by CMS to be used by the Medicare FFS health care community and are not intended for distribution to Medicare beneficiaries.
