

## Primary Care Incentive Payment Program (PCIP)

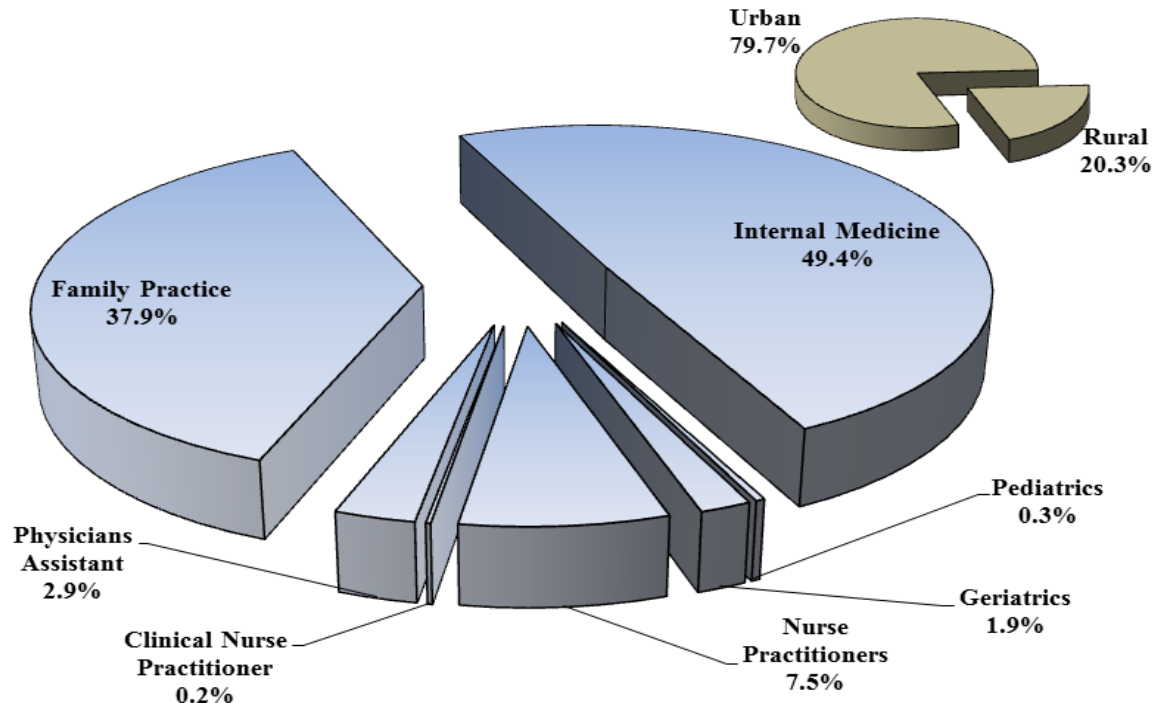

Medicare PCIP Payments for 2012 are over \$664\* million

Section 5501(a) of the Affordable Care Act authorized a quarterly incentive payment program to augment the Medicare payment for primary care services when furnished by primary care practitioners beginning in 2011 and ending in 2015. Primary care practitioners with a Medicare specialty designation of family medicine, geriatric medicine, pediatric medicine, internal medicine, nurse practitioner, clinical nurse specialist, or physician assistant, are eligible for the incentive payment if primary care services (CPT codes 99201 through 99215 and 99304 through 99350) accounted for at least 60 percent of the practitioner's total allowed charges under the physician fee schedule in the qualifying calendar year.

To calculate a practitioner's primary care percentage, CMS uses Medicare claims data from the calendar year that is two years prior to the PCIP incentive payment year. Emergency, hospital inpatient, drug and laboratory charges are excluded when calculating the practitioner's total allowed charges under the physician fee schedule.

Incentive payments are equal to 10 percent of the Medicare paid amount for primary care services. For CY 2012, Medicare paid over \$664 million\* to eligible PCIP practitioners furnishing eligible PCIP services. Quarterly incentive payments are made to individual physicians, nonphysician practitioners, group practices and Method II critical access hospitals billing for practitioners.

### Distribution by Medicare Specialty Designation and Urban / Rural

Estimated incentive payments by Medicare Specialty and Urban/Rural mix based upon claims paid for primary care services in 2012.

\*Total does not include 2012 PCIP payments for newly enrolled Medicare providers or services for which claims were paid after December 31, 2012.
