Home Health Quality Measures – Process

Notes:

1. **Risk Adjustment:** Process measures are not risk adjusted to compensate for differences in the patient population. This is because the processes of care in the measures apply to all of the patients in the denominator (except for those patients that are identified in the denominator exclusions).

2. **“Quality Episode” Definition:** Quality episodes are used in the calculation of the quality measures. Quality episodes are not the same as payment, or Prospective Payment System (PPS) episodes. A quality episode begins with either a SOC or ROC and ends with a transfer, death, or discharge for a patient regardless of the length of time between the start and ending events.

3. **Generic Exclusions:** For OASIS-based measures, in addition to the denominator criteria listed on this table, the denominator excludes patients who 1) have a home care payment source other than Medicare (traditional fee-for-service, Medicare (HMO/managed care/Advantage plan), Medicaid (traditional fee-for-service), or Medicaid (HMO/managed care), 2) are less than 18 years, 3) are receiving pre- and/or post-partum maternity services, or 4) are receiving personal care only.

4. **Quality of Patient Care star rating:** An asterisk (*) next to the measure name indicates the measure is included in the Quality of Patient Care star rating algorithm. “Drug Education on all Medications” will be removed from the rating in April 2019.
