WHAT'S NEW?

Medicare reimbursement rates change periodically. Refer to the [Seasonal Influenza Vaccines Pricing webpage](#) for up-to-date payment allowances on influenza vaccines.

QUICK FACTS!

- Enrolled providers may roster bill for seasonal influenza virus and pneumococcal vaccinations even if they are not a mass immunizer.
- All physicians, non-physician practitioners (NPPs), and suppliers administering the seasonal influenza virus and the pneumococcal vaccines must accept assignment on the claims for those vaccines.
- Part B benefits cover seasonal influenza virus and pneumococcal vaccines and their administration, but Part D benefits do **not** cover them.
- For Part B billing purposes, entities such as local health facilities must obtain a [National Provider Identifier \(NPI\)](#) if they have never submitted Medicare claims.

Centers for Disease Control and Prevention

The Advisory Committee on Immunization Practices (ACIP) at the Centers for Disease Control and Prevention (CDC) updates recommendations for influenza vaccines annually and reports on the viruses targeted by the various vaccine formulations. For more information on the targeted viruses for the current influenza season, refer to the CDC [Prevention and Control of Seasonal Influenza with Vaccines webpage](#).

INSTITUTIONAL PROVIDERS: ADDITIONAL BILLING INFORMATION

The table below provides the Type of Bill (TOB) institutional providers use for billing immunizations.

Facility Types and TOBs for Immunizations

Facility Type	Type of Bill
Hospital Inpatient (Part B)	12X
Hospital Outpatient	13X
Skilled Nursing Facility (SNF) Covered Part A stay (paid under Part B)	22X
SNF Part B Residents	22X
SNF Outpatient	23X
Home Health (Part B Only)	34X
Independent and Hospital-Based Renal Dialysis Facility (RDF)	72X
Comprehensive Outpatient Rehabilitation Facility (CORF)	75X
Federally Qualified Health Center (FQHC)	77X*
Hospice (Non-Hospital)	81X
Hospice (Hospital)	82X
Indian Health Service (IHS) Hospital	83X
Critical Access Hospital (CAH)	85X

Revenue Codes (except Rural Health Clinics [RHCs] and FQHCs): 0636 – vaccine
0771 – vaccine administration

* FQHCs report vaccines on TOB 77X for informational and data collection only.

Special Billing Information for RHCs and FQHCs

The tables below provide special billing information for RHCs and FQHCs. For more information and examples, refer to the [RHCs and FQHCs Billing Guide](#).

Special Billing Information for RHCs

Vaccine & Administration	Report on a Separate Line?	Payment
Seasonal influenza virus or pneumococcal vaccines and their administration	No	Included in the cost report (not in the encounter)
Hepatitis B vaccine and its administration	Yes (carve out charges for the vaccine and its administration from the office visit and report on a separate claim line) NOTE: Do not bill if vaccine administration was the only service provided	Hepatitis B vaccine is included in the encounter rate. Include the charges of the vaccine and its administration in the line item for the otherwise qualifying encounter. Do not bill an encounter if vaccine administration is the only service the RHC/FQHC provides.

Special Billing Information for FQHCs

Vaccine & Administration	Report on a Separate Line?	Payment
Seasonal influenza virus or pneumococcal vaccines and their administration	Yes (carve out charges for the vaccine and its administration from the office visit and report them on a separate claim line) NOTE: Do not bill an encounter if vaccine administration was the only service provided	Included in the cost report (not in the encounter)
Hepatitis B vaccine and its administration	Yes (carve out charges for the vaccine and its administration from the office visit and report them on a separate claim line) NOTE: Do not bill an encounter if vaccine administration was the only service provided	Hepatitis B vaccine is included in the encounter rate. Include the charges of the vaccine and its administration in the line item for the otherwise qualifying encounter. Do not bill an encounter if vaccine administration is the only service the RHC/FQHC provides.

FREQUENTLY ASKED QUESTIONS

Does the Medicare Part B deductible, coinsurance, or copayment apply for Part B-covered immunizations?

When physicians or suppliers agree to accept assignment, neither the Part B deductible, coinsurance, or copayment applies to the seasonal influenza virus, pneumococcal, and Hepatitis B vaccines or their administration.

If a beneficiary gets a seasonal influenza virus vaccine more than once in a 12-month period, will Medicare still pay for it?

Yes, Medicare pays for one seasonal influenza virus vaccination per influenza season; however, a beneficiary could get the seasonal influenza virus vaccine twice in a calendar year for two different influenza seasons, and Medicare would pay the provider for each. For example, a beneficiary who received a seasonal influenza virus vaccination in January 2018 for the 2017–2018 influenza season could receive another seasonal influenza virus vaccination in November 2018 for the 2018–2019 influenza season, and Medicare would pay for both vaccinations.

Should providers administer the pneumococcal vaccination if a beneficiary is uncertain of his or her vaccination history?

Yes, if a beneficiary is uncertain about his or her vaccination history, provide the vaccine. Medicare beneficiaries are eligible for one initial pneumococcal vaccine and a different pneumococcal vaccine one year after the first vaccine was administered (at least 11 months have passed following the month in which the last pneumococcal vaccine was administered). Beneficiaries may be liable for the costs of the revaccination if they have exceeded the benefit maximum or if the timing of these services is sooner than the requirement for 11 full months to have passed following the month in which the last pneumococcal vaccine was administered. We encourage providers to closely track vaccination history.

Does Medicare cover the hepatitis B vaccine for all Medicare beneficiaries?

No, Medicare covers the hepatitis B vaccine for certain beneficiaries at intermediate to high risk for the hepatitis B virus (HBV). These individuals include health care professionals who have frequent contact with blood or blood-derived body fluids during routine work, individuals with End-Stage Renal Disease (ESRD), individuals living in the same household as an HBV carrier, and individuals diagnosed with diabetes mellitus. Other situations could qualify a beneficiary as being at intermediate or high risk of contracting HBV. Medicare beneficiaries **not** eligible for this benefit are those currently positive for hepatitis B antibodies.

When a beneficiary gets both the seasonal influenza virus and pneumococcal vaccines on the same visit, do I continue to report separate administration codes for each type of vaccine?

Yes, use separate administration codes for the seasonal influenza virus (G0008) and pneumococcal (G0009) vaccines. Medicare pays both administration fees if a beneficiary gets both the seasonal influenza virus and the pneumococcal vaccines on the same day.

Can I roster bill the seasonal influenza virus, pneumococcal, and hepatitis B vaccines?

You may roster bill the seasonal influenza virus and pneumococcal vaccines. You cannot roster bill the hepatitis B vaccine.

What is a mass immunizer?

A mass immunizer offers seasonal influenza virus vaccination, pneumococcal vaccination, or both to a large number of individuals. A mass immunizer may be a traditional Medicare provider or supplier or a nontraditional provider or supplier (such as a senior citizens' center, a public health clinic, or a community pharmacy). Mass immunizers must submit claims for immunizations on roster bills and must accept assignment on both the vaccine and its administration. A mass immunizer should enroll with the Medicare Administrative Contractor (MAC) prior to each influenza season. Please see the next question for more enrollment information.

Do providers only providing immunizations need to enroll in the Medicare Program?

Yes, providers must enroll in the Medicare Program even if immunizations are the only service they will provide to beneficiaries. They should enroll as provider specialty type 73, Mass Immunization Roster Biller, by completing [Form CMS-855I](#) for individuals or [Form CMS-855B](#) for a group. New providers must first receive an NPI prior to enrollment. To obtain an NPI if you do not already have one, register through the [Identity & Access Management System](#), then go to the [National Plan & Provider Enumeration System](#).

May I submit a single roster claim containing information for both the seasonal influenza virus and pneumococcal vaccines when the vaccines are administered on the same visit?

No, you must prepare a separate roster claim for the seasonal influenza virus vaccine and the pneumococcal vaccine. However, you may file an individual claim containing information for both types of vaccines.
