Overview of the Patient-Driven Groupings Model (PDGM)

February 12, 2019

Presenters:
Kelly Vontran, Technical Advisor, Division of Home Health and Hospice
Wil Gehne, Technical Advisor, Division of Institutional Claims Processing
Acronyms in this Presentation

- **BLS**: Bureau of Labor Statistics
- **CPM + NRS**: Cost per Minute + Non-Routine Supplies
- **CY**: Calendar Year
- **HH PPS**: Home Health Prospective Payment System
- **HH**: Home Health
- **HHAs**: Home Health Agencies
- **HHRGs**: Home Health Resource Groups
- **HIPPS**: Health Insurance Prospective Payment System
- **ICD**: International Classification of Diseases
- **IV**: Intravenous
- **LUPA**: Low Utilization Payment Adjustment
- **MedPAC**: Medicare Payment Advisory Commission
- **MMTA**: Medication Management, Teaching, and Assessment
- **MS**: Musculoskeletal
- **MSS**: Medical Social Services
- **OASIS**: Outcome and Assessment Information Set
- **OT**: Occupational Therapy
- **PDGM**: Patient-Driven Groupings Model
- **PT**: Physical Therapy
- **RAP**: Request for Anticipated Payment
- **SLP**: Speech Language Pathology
- **SN**: Skilled Nursing
- **WWMC**: Wage Weighted Minutes of Care
Agenda

1. Current HH PPS**
2. Overview of the PDGM
3. Measuring Period Costs
4. 30-Day Periods
5. Admission Source and Timing
6. Clinical Groups
7. Functional Impairment Levels
8. Comorbidity Group
9. Case-Mix Weights
10. Other Adjustments
11. Grouper Tool and Example Scenarios
12. Operational Changes

Current Home Health Prospective Payment System (HH PPS)

• Implemented in October 2000
  – Bundled payment for all covered HH services provided in a 60-day episode

• Level of payment determined by case-mix adjustment
  – Allows different payment for patients with different needs

• Differential resource use intensity measured using wage-weighted minutes of care (WWMC)
  – Amount of time multiplied by average wages from the Bureau of Labor Statistics (BLS) by home health discipline
Current Home Health Prospective Payment System, continued

• Home Health Agencies (HHAs) complete the Outcome and Assessment Information Set (OASIS) for each patient

• Result of the assessment groups episode into one of 153 Home Health Resource Groups (HHRGs)
  – Timing (early/late episodes; exception 20+ therapy group)
  – 3 clinical levels
  – 3 functional levels
  – 9 service use categories (number of therapy visits)

• HHRG is the starting point for payment calculation
153 Home Health Resource Groups (HHRGs) based on severity levels:

- **Clinical:** whether the patient has one or more clinical conditions such as incontinence; intravenous infusion (IV), enteral, or parenteral therapies; the presence of wounds or pressure ulcers, etc.

- **Functional:** whether the patient has problems with activities of daily living such as dressing, bathing, transferring, walking (locomotion), and toileting

- **Service utilization:** based on the number of therapy visits during the episode

Motivation for Development of the PDGM – Section 3131(d) Report to Congress

• Section 3131(d) of the Affordable Care Act - Report to Congress found current payment system produced lower margins for those patients:
  
  - needing parenteral nutrition
  - with traumatic wounds or ulcers
  - who required substantial assistance in bathing
  - admitted to HH following an acute or post-acute stay
  - who have a high Hierarchical Condition Category score
  - who had certain poorly controlled clinical conditions
  - who were dual eligible

Source: https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/HomeHealthPPS/Downloads/HH-Report-to-Congress.pdf

• The Medicare HH benefit is ill-defined

• HH payment should not be based on the number of therapy visits
  – Payments based on therapy thresholds creates financial incentives that distract agencies from focusing on patient characteristics when setting plans of care.
  – Trend of notable shifts away from non-therapy visits.

• HH payment should be determined by patient characteristics

Source:  http://www.medpac.gov/docs/default-source/reports/Mar11_Ch08.pdf?sfvrsn=0
Development of the PDGM

• Reexamined payment reform principles
  – Improve payment accuracy for HH services
  – Promote fair compensation to HHAs
  – Increase the quality of care for beneficiaries

• Conducted initial analytic work
  – Assessing utilization of current payment system
  – Considered alternative approaches to construct case-mix weights
    ◦ Diagnosis on top
    ◦ Predicted therapy
    ◦ Home Health Groupings Model

• Payment reform solidified by Bipartisan Budget Act of 2018
  – Payment based on 30-day periods (instead of 60-day episodes)
  – Elimination of therapy thresholds

** indicates section to follow
Patient-Driven Groupings Model (PDGM)

- The PDGM is a new payment model for the Home Health Prospective Payment System (HH PPS) that relies more heavily on clinical characteristics and other patient information to place home health periods of care into meaningful payment categories and eliminates the use of therapy service thresholds.

- PDGM will take effect January 1, 2020.

- In conjunction with the implementation of the PDGM there will be a change in the unit of home health payment from a 60-day episode to a 30-day period.
How the Patient-Driven Groupings Model Works

- Five main case-mix variables—
  1. Admission Source
  2. Timing
  3. Clinical Grouping
  4. Functional Impairment Level
  5. Comorbidity Adjustment

- A 30-day period is grouped into one subcategory in each color category

- This results in 432 possible case-mix adjusted payment groups into which a 30-day period can be placed:
  
  \[
  (2^2 \times 12 \times 3 \times 3) = 432 \text{ HHRGs}
  \]

1. Gastrointestinal tract/Genitourinary system
2. The infectious disease category also includes diagnoses related to neoplasms and blood-forming diseases

** indicates section to follow
Measuring 30-Day Period Costs Under PDGM

• Need to measure period costs to calculate case-mix adjustment factors that account for variation in costs among different units of services.

• Cost per Minute plus Non-Routine Supplies (CPM + NRS) Approach
  – Uses Medicare cost reports and better reflects total HHA costs
  – Incorporates NRS into the base payment instead of requiring a separate model (as is done under the current payment system)
Cost per Minute plus Non-Routine Supplies (CPM + NRS)

**Data Sources**  Cost reports, HH Medicare claims

**General Approach**  Total costs multiplied by amount of care provided for each discipline

**Costs Represented**  Wages, fringe benefits, overhead costs, transportation costs, other non-visiting services labor costs

**Non-Routine Supply**  Use NRS cost-to-charge ratio to obtain NRS costs per period

** indicates section to follow
30-Day Periods

• In the current HH PPS, HHAs are paid for each (up to) 60-day episode of care provided.

• However, more visits tend to occur in the first 30-day period of a 60-day episode of care.

• For the PDGM, payment is made for each 30-day period, as required by the BBA of 2018.

• Only affects payment, no changes to the requirements for certification/recertification, completion of OASIS assessments, or updates to the patient’s plan of care, all of which continue to be done on a 60-day basis.
National, Standardized 30-day Period Payment Amount

• The PDGM will not be implemented until CY 2020.

• However, to provide HHAs with a sense of the payment amount for a 30-day period of care, we estimated that if the PDGM was implemented in CY 2019, the estimated national, standardized 30-day payment would be: $1,753.68

• This 30-day payment amount will be updated for CY 2020.

Periods are Grouped by Admission Source and Timing

- Admission source
  - Institutional versus community
- Period timing
  - Early versus late
Admission Source

• **Institutional:**
  - Acute (inpatient acute care hospitals), or;
  - Post-acute (skilled nursing facility, inpatient rehabilitation facility, long term care hospital, or inpatient psychiatric facility) care in the 14 days prior to the HH admission

• **Community:** No acute or post-acute care in the 14 days prior to the HH admission

• 30-day periods with an institutional admission source were found to have higher resource use than periods with a community admission source
Timing

• **Sequence of HH periods**: Periods with no more than 60 days between the end of one period and the start of the next period (no change from current definition)

• **Early periods**: the first 30-day period in a sequence of HH periods

• **Late periods**: second and later 30-day periods in a sequence of HH periods
Additional Notes on Admission Source and Timing

• Late 30-day periods are always classified as a community admission unless there is an acute hospitalization in the 14 days prior to the late home health 30-day period (HHAs have the option whether or not to discharge the patient if the patient is hospitalized for a short period of time).

• A post-acute stay in the 14 days prior to a late home health 30-day period would not be classified as an institutional admission unless the patient had been discharged from home health prior to post-acute stay (which is what we would expect to occur).

• Information will come from Medicare systems during claims processing to automatically assign admission source and timing categories.

• HHAs have the option to include an occurrence code on the claim to identify an institutional admission source.

Periods are Grouped by Primary Reason for Home Health under the PDGM

- Clinical groups are intended to reflect the primary reason for HH services
- Defined by the principal diagnosis reported on HH claim
- Twelve total groups used in the PDGM
## Description of the 12 Clinical Groups

<table>
<thead>
<tr>

ICD-10 Codes Used to Determine Clinical Group

• 30-day period assigned to clinical group based on principal diagnosis code on the claim.

• The average resource use of all 30-day periods within a clinical group varies across clinical groups and the payment reflects those differences.

• If a diagnosis code is used that does not fall into a clinical group (e.g., dental codes or other uncovered/invalid codes), claim is returned to the provider for more definitive coding.

• Additional adjustments made for other health conditions (discussed later).

<td>Yes</td>
<td>Yes</td>
</tr>
<tr>
<td>M1033: Risk for hospitalization</td>
<td>No</td>
<td>Yes</td>
</tr>
</tbody>
</table>
Steps for Creating the Functional Impairment Levels

• Determine points for response groups
  – Resource use is regressed on the seven OASIS items (along with other covariates from each of the PDGM groups)
  – Regression coefficients determine the number of points
  – Points reflect relative resource group (high intensity, greater number of points)

• Calculate the functional score
  – For each 30-day period, points are summed to determine an overall functional score

• Assign functional impairment level using score
  – Within each PDGM diagnosis grouping, periods are split into thirds and assigned to a low, medium, or high functional impairment group

Periods are Grouped by a Comorbidity Adjustment

- The PDGM includes a comorbidity adjustment category based on the presence of secondary diagnoses
- A 30-day period may receive
  - no comorbidity adjustment,
  - a low comorbidity adjustment,
  - or a high comorbidity adjustment
Comorbidity Adjustment

• The principal HHA-reported diagnosis determines the PDGM clinical group.

• However, secondary diagnoses also impact resource use and should be taken into account.

• A **comorbidity** is defined as a medical condition coexisting in addition to a principal diagnosis.
  – Comorbidity is tied to poorer health outcomes, more complex medical need and management, and higher care costs.
A HH specific comorbidity list was developed with broad clinical categories used to group comorbidities within the PDGM:

- Heart disease
- Respiratory disease
- Circulatory disease
- Cerebral vascular disease
- Gastrointestinal disease
- Neurological conditions
- Endocrine disease
- Neoplasms
- Genitourinary/Renal disease
- Skin disease
- Musculoskeletal disease
- Behavioral health issues (including substance use disorders)
- Infectious diseases
Comorbidities Specific to Home Health

Home health 30-day periods of care can receive a comorbidity adjustment under the following circumstances:

• **Low comorbidity adjustment:** There is a reported secondary diagnosis that is associated with higher resource use, or;

• **High comorbidity adjustment:** There are two or more secondary diagnoses that are associated with higher resource use when both are reported together compared to if they were reported separately. That is, the two diagnoses may interact with one another, resulting in higher resource use.

• **No comorbidity adjustment:** there is no reported secondary diagnosis that falls in either the low or high comorbidity adjustment.
### Low Comorbidity Adjustment Subgroups

As shown in the CY 2019 HH PPS Final Rule (83 FR 56487)

10. Other Adjustments
11. Grouper Tool and Example Scenarios
12. Operational Changes

** indicates section to follow
Home Health Groupings Model: Case-Mix Weights

- The PDGM assigns separate payment weights to periods for patients with similar characteristics and needs:
  - Each 30-day period assigned into one of 432 case-mix groups.
  - Regression using a fixed effects model to measure resource use with the Cost Per Minute (CPM) + NRS approach.
  - Each group’s case-mix weight reflects the group’s predicted mean cost relative to the overall average.
  - New case-mix weights are used to adjust the HH base payment amount; higher resource need periods are assigned higher case-mix weights and thereby receive more payment.
  - Annual recalibration of the PDGM case-mix weights to reflect the most recent utilization data available at time of rulemaking.
Agenda

1. Current HH PPS
2. Overview of the PDGM
3. Measuring Period Costs
4. 30-Day Periods

10. Other Adjustments**
11. Grouper Tool and Example Scenarios
12. Operational Changes

** indicates section to follow
Low Utilization Payment Adjustment

• Payments for 30-day periods with a low number of visits are not case-mix adjusted, but instead paid on a per-visit basis using the national per-visit rates.

• Each of the 432 different PDGM payment groups has a threshold that determines if the 30-day period receives this Low-Utilization Payment Adjustment (LUPA).
  - For each payment group, the 10th percentile value of visits is used to create a payment group specific LUPA threshold with a minimum threshold of at least two for each group (range is 2-6 visits in a 30-day period).
  - The LUPA thresholds for each of the 432 case-mix groups can be found in Table 32 in the CY 2019 HH PPS Final Rule (83 FR 56493) and on the HHA Center webpage.
Partial Payment Adjustment

• Payments would be adjusted if a beneficiary transfers from one home health agency to another or is discharged and readmitted to the same agency within 30 days of the original 30-day period start date.

• The case-mix adjusted payment for 30-day periods of that type is pro-rated based on the length of the 30-day period ending in transfer or discharge and readmission, resulting in a partial period payment.
Outlier Payment

• Periods that have estimated costs of care (the wage-adjusted costs) that exceed a specific outlier threshold receive an outlier payment to cover a portion of the high costs associated with that 30-day period.

• The approach to calculating the outlier payment is the same as the approach used in the current system.
Agenda

1. Current HH PPS
2. Overview of the PDGM
3. Measuring Period Costs
4. 30-Day Periods
5. Admission Source and Timing
6. Clinical Groups

** indicates section to follow
Example Grouper Tool

- **Interactive Grouper tool** for learning about the PDGM.
- Obtain the resulting HIPPS code and case mix weight by entering information on a patient’s 30-day period for each PDGM category.
- Purpose of this tool is informational and illustrative only – final CMS grouper software available in 2020.

**Download Updated PDGM Grouper Tool CY 2019_11_6_18.xlsx**

**HH PPS Proposed PDGM**

Number of visits provided for this 30-day period of care: 

---

Disclaimer:
All scenarios are for illustrative purposes and assumption is that these beneficiaries meet all criteria for home health services.
Example Scenario 1 – Timing and Admission Source

Mr. Smith was newly diagnosed by his primary care physician with type 2 diabetes with hyperglycemia (E11.65). Mr. Smith’s doctor made a home health referral for diabetic management teaching, medication review and evaluation of compliance and response to new medications. Mr. Smith also has a documented history of chronic, systolic (congestive) heart failure (I50.22), cerebral atherosclerosis (I67.2), and benign prostatic hypertrophy (N40.0)

Select Timing and Admission Source of the 30-period

Early: first 30-day period in a sequence of periods

Community: No acute or post-acute care in the 14 days prior to the HH admission

Disclaimer: All scenarios are for illustrative purposes and assumption is that these beneficiaries meet all criteria for home health services.
Example Scenario 1 – Clinical Grouping

Mr. Smith was newly diagnosed by his primary care physician with type 2 diabetes with hyperglycemia (E11.65). Mr. Smith’s doctor made a home health referral for diabetic management teaching, medication review and evaluation of compliance and response to new medications. Mr. Smith also has a documented history of chronic, systolic (congestive) heart failure (I50.22), cerebral atherosclerosis (I67.2), and benign prostatic hypertrophy (N40.0)

Disclaimer: All scenarios are for illustrative purposes and assumption is that these beneficiaries meet all criteria for home health services.
Example Scenario 1 – Comorbidity Adjustment

Mr. Smith was newly diagnosed by his primary care physician with type 2 diabetes with hyperglycemia (E11.65). Mr. Smith’s doctor made a home health referral for diabetic management teaching, medication review and evaluation of compliance and response to new medications. Mr. Smith also has a documented history of chronic, systolic (congestive) heart failure (I50.22), cerebral atherosclerosis (I67.2), and benign prostatic hypertrophy (N40.0)
Example Scenario 1 – Functional Points, Part 1 of 2

The HHA completed the initial OASIS assessment:

- M1033 Risk of Hospitalization: Responses 4-7 (two or more emergency department visits in 6 months; decline in mental, emotional or behavioral status in the past 3 months; reported or observed history of difficulty complying with any medical instructions (for example, medications, diet, exercise) in the past 3 months; and, currently taking five or more medications)
Example Scenario 1 – Functional Points, Part 2 of 2

The HHA completed the initial OASIS assessment with the following responses to the OASIS functional items:

- M1800 Grooming
- M1810 Upper body dressing
- M1820 Lower body dressing
- M1830 Bathing
- M1840 Toilet transferring
- M1850 Transferring
- M1860 Ambulation/locomotion

The sum of Functional Points auto-populates Functional Score

Functional Score (Total) = 18
Example Scenario 1 – HIPPS and Case-Mix Weight

- HHRG payment group = Early-Community-Medication Management, Teaching and Assessment, Endocrine-Low Functional Impairment-High Comorbidity (1IA31)

- Case-mix weight = 1.2759

- Does not include LUPA, partial payments and outlier adjustments

- Official CMS grouper tool will be updated along with rulemaking

</table>
Example Scenario 2

• Mrs. Jones was discharged from the hospital status post colectomy with colostomy placement for colon cancer.

• She has documented post-mastectomy lymphedema syndrome (I97.2) from a previous episode of breast cancer with surgery and lymph node removal 10 years ago for which she wears a compression sleeve that limits the use of her affected arm. She has residual weakness (M62.81) from a prolonged hospital stay. She also has a diagnosis of Type 1 diabetes without complications (E10.9).

• Mrs. Jones’s surgeon has referred her to home health for colostomy teaching and management (Z43.3) and physical therapy to assist with post-op strengthening.

Disclaimer: All scenarios are for illustrative purposes and assumption is that these beneficiaries meet all criteria for home health services.
Example Scenario 2 – Input into PDGM Tool

• Early period
• Institutional admission source
• Add primary and secondary diagnosis codes
Example Scenario 2, continued

OASIS responses from initial assessment for:

- Risk for Hospitalization
- Functional items

**Functional Score (Total) => 52**
Example Scenario 2 – HIPPS and Case-Mix Weight

• HHRG payment group = Early-Institutional-Complex Nursing Interventions-Medium Functional Impairment-High Comorbidity (2DB31)

• Case-mix weight = 1.5255

• Does not include LUPA, partial payments and outlier adjustments

• Official CMS grouper tool will be updated along with rulemaking
## Example Scenario #2: 30-day Payment Plus Case-Mix Adjustment and Geographic Wage Index

</tbody>
</table>
Example Scenario 3

• Mr. Gray has been receiving home health services for 60 days (two contiguous 30-day periods of home health care) with a diagnosis of Parkinson’s disease (G20).

• He continues with decreased endurance requiring continued skilled therapy services twice a week. Mr. Gray requires a home health aide three times a week to assist with bathing and dressing.

• He has a documented history of chronic atrial fibrillation (I48.2), primary osteoarthritis of the right shoulder (M19.011), right hand (M19.041), and left hand (M19.042).
Example Scenario 3 – Input into PDGM Tool

- Late period
- Community admission source
- Add primary and secondary diagnosis codes from recertification assessment

Disclaimer: All scenarios are for illustrative purposes and assumption is that these beneficiaries meet all criteria for home health services.
Example Scenario 3, continued

- Input OASIS responses from recertification assessment:

- Risk for Hospitalization

- Functional items
Example Scenario 3 – HIPPS and Case-Mix Weight

- HHRG payment group = Late-Community-Neuro Rehab-High Functional Impairment-Low Comorbidity (3BC21)

- Case-mix weight = 1.1117

- Does not include LUPA, partial payments and outlier adjustments

- Official CMS grouper tool will be updated along with rulemaking

12. Operational Changes**

** indicates section to follow
Operational Changes under PDGM: Split Percentage Payments

- HHAs newly enrolled in Medicare on or after January 1, 2019 will not receive split percentage payments beginning CY 2020 but still need to submit a no-pay Request for Anticipated Payment (RAP) at the beginning of each 30-day period to establish the home health period of care. A final claim will be submitted at the end of each 30-day period.

- HHAs certified for participation in Medicare prior to January 1, 2019, will continue to receive split percentage payments in CY 2020. Existing HHAs will need to submit a RAP at the beginning of each 30-day period and a final claim at the end of each 30-day period.

- For the first 30-day period of care, the split percentage payment would be 60/40 and all subsequent 30-day periods of care would be a split percentage payment of 50/50.
Operational Changes under PDGM: RAPs and Admission Source

• For admission source, CMS would only adjust the final home health claim submitted for source of admission.

• If RAP is submitted and paid with community admission and then an acute or post-acute Medicare claims was submitted for that patient before the final home health claim was submitted. The RAP would not be adjusted. Only the final home health claim would be adjusted to reflect the institutional admission.

• HHAs would only indicate admission source occurrence codes on the final claim and not on any RAPs submitted. More details provided on subsequent slide.
Operational Changes under PDGM: HIPPS Code

- Each character of the Health Insurance Prospective Payment System (HIPPS) is associated with the PDGM variables as previously described.
  - **Position #1:** Timing and Admission Source
  - **Position #2:** Clinical Grouping
  - **Position #3:** Functional Impairment Level
  - **Position #4:** Comorbidity Adjustment
  - **Position #5:** Placeholder

- Example HIPPS Code:
  - 2DC21 = Early-Institutional/Complex Nursing/High Functional Impairment/
    Low Comorbidity Adjustment

- **HIPPS code is no longer required with OASIS submission** – the system will automatically draw the information from the claims and submitted assessment needed to group the 30-day period.
  - HIPPS code should still be submitted for RAP and claims (but only system-generated code will be used for payment).
Operational Changes under PDGM: OASIS Item Set

OASIS assessment used in determining HIPPS is most recent time point:

• Start of Care (SOC) assessment used for determining the functional impairment level for both the first and second 30-day periods of a new home health admission.

• Follow-up assessment used for third and fourth 30-day periods.

• Resumption of Care (ROC) assessments may be used for determining the functional impairment level for the second (or later) 30-day period if the patient was transferred and admitted to the hospital for 24 hours or more.

• The system will look for the most recent OASIS assessment based on the claim’s “From Date”.
Operational Changes under PDGM: Other Claims Coding Changes

• A treatment authorization code is no longer required on every HH claim. This field will only be used when required by the Pre-Claim Review project.

• The OASIS assessment completion date will be required on all claims.
  ‒ Report occurrence code 50 and the OASIS item M0090 date

• To facilitate accurate assignment of the claim into institutional vs. community payment groups, HHAs will have the option of reporting inpatient discharge dates on their claims, using newly-created occurrence codes.
  ‒ Report Occurrence code 61 to indicate an acute care hospital discharge within 14 days prior to the From date of any HH claim.
  ‒ Report Occurrence code 62 to indicate a SNF, IRF, LTCH or IPF discharge within 14 days prior to the Admission date of the first HH claim.
Operational Changes under PDGM: Transition from Current System

For implementation purposes:

• For 60-day episodes that begin on or before December 31, 2019 and end on or after January 1, 2020 (i.e., episodes that would span the January 1, 2020 implementation date), payment will be the CY 2020 national, standardized 60-day episode payment amount.

• For HH periods of care that begin on or after January 1, 2020, the unit of payment will be the CY 2020 national, standardized 30-day payment amount.

• Under the PDGM, recertification for home health services, updates to the comprehensive assessment and updates to the HH plan of care will continue on a 60-day basis.
