Section 45-31, Intravenous Immune Globulin’s (IVIg) for the Treatment of Autoimmune Mucocutaneous Blistering Diseases, is added to provide limited coverage for the use of IVIg for the treatment of biopsy-proven (1) Pemphigus Vulgaris, (2) Pemphigus Foliaceus, (3) Bullous Pemphigoid, (4) Mucous Membrane Pemphigoid (a.k.a., Cicatricial Pemphigoid), and (5) Epidermolysis Bullosa Acquisita.

This revision to the Coverage Issues Manual is a national coverage decision (NCD). The NCDs are binding on all Medicare carriers, intermediaries, peer review organizations, health maintenance organizations, competitive medical plans, and health care prepayment plans. Under 42 CFR 422.256(b), an NCD that expands coverage is also binding on a Medicare+Choice Organization. In addition, an administrative law judge may not review an NCD. (See §1869(f)(1)(A)(i) of the Social Security Act.)

These instructions should be implemented within your current operating budget.

DISCLAIMER: The revision date and transmittal number only apply to the redlined material. All other material was previously published in the manual and is only being reprinted.
COVERAGE ISSUES

Nonselective (Random) Transfusions and Living-Related Donor Specific Transfusions (DST) in Kidney Transplantation 35-71
Electrotherapy for Treatment of Facial Nerve Paralysis (Bell's Palsy) - Not Covered 35-72
Injection Sclerotherapy for Esophageal Variceal Bleeding 35-73
External Counterpulsation (ECP) for Severe Angina 35-74
Intraoperative Ventricular Mapping 35-75
Neuromuscular Electrical Stimulation (NMES) in the Treatment of Disuse Atrophy 35-77
Diagnostic Endocardial Electrical Stimulation (Pacing) 35-78
Anesthesia in Cardiac Pacemaker Surgery 35-79
Treatment of Kidney Stones 35-81
Pancreas Transplants 35-82
24-Hour Ambulatory Esophageal pH Monitoring 35-83
Intraoperative Ventricular Mapping 35-75
Stereotactic Cingulotomy as a Means of Psychosurgery - Not Covered 35-84
Implantation of Automatic Defibrillators 35-85
Gastric Balloon for Treatment of Obesity - Not Covered 35-86
Heart Transplants 35-87
Extracorporeal Photopheresis 35-88
Speech Pathology Services for the Treatment of Dysphagia 35-89
Extracorporeal Immunoadsorption (ECI) Using Protein A Columns for the Treatment of Patients With Idiopathic Thrombocytopenia Purpura (ITP) Failing Other Treatments 35-90
Laparoscopic Cholecystectomy 35-91
Transcendental Meditation - Not Covered 35-92
Lung Volume Reduction Surgery (Reduction Pneumoplasty, Also Called Lung Shaving or Lung Contouring) Unilateral or Bilateral By Open or Thoracoscopic Approach for Treatment of Emphysema and Chronic Obstructive Pulmonary Disease - Not Covered 35-93
Transmyocardial Revascularization With Laser - Not Covered 35-94
Partial Ventriculectomy (Also known as Ventricular Reduction, Ventricular Remodeling, or Heart Volume Reduction Surgery) - Not Covered 35-95
Cryosurgery of Prostate - Not Covered 35-96
Vertebral Axial Decompression (VAX-D) - Not Covered 35-97
Electronic stimulation in the Treatment of Wounds 35-98
Abortion 35-99
Photodynamic Therapy 35-100
Treatment of Actinic Keratosis 35-101

Supplies - Drugs

L-Dopa 45-1
Insulin Syringe 45-3
Vitamin B-12 Injections to Strengthen Tendons, Ligaments, Etc., of the Foot - Not Covered 45-4
Hydrophilic Contact Lens for Corneal Bandage 45-7
Laetrile and Related Substances - Not Covered 45-10
Autogenous Epidural Blood Graft 45-11
Porcine Skin and Gradient Pressure Dressing 45-12
Physician's Office Within an Institution - Coverage of Services and Supplies Incident to a Physician's Services 45-15
Certain Drugs Distributed by the National Cancer Institute 45-16
Transfer Factor for Treatment of Multiple Sclerosis Granulocyte Transfusions 45-18
Transcutaneous Electrical Nerve Stimulation (TENS) for Acute Post-Operative Pain 45-19

Rev. 155
COVERAGE ISSUES

Ethylenediamine-Tetra-Acetic (EDTA) Chelation Therapy for Treatment of Atherosclerosis 45-20
Scalp Hypothermia During Chemotherapy to Prevent Hair Loss 45-21
Lymphocyte Immune Globulin, Anti-Thymocyte Globulin (Equine) 45-22
Dimethyl Sulfoxide (DMSO) 45-23
Anti-Inhibitor Coagulant Complex (AICC) 45-24
Supplies Used in the Delivery of Transcutaneous Electrical Nerve Stimulation (TENS) and Neuromuscular Electrical Stimulation (NMES) 45-25
Platelet-Derived Wound Healing Formula 45-26
Blood Transfusions 45-27
Antigens Prepared for Sublingual Administration 45-28
Intravenous Iron Therapy 45-29
Photosensitive Drugs 45-30
Intravenous Immune Globulin for the Treatment of Autoimmune Mucocutaneous Blistering Diseases 45-31

Diagnostic Services

Cardiac Pacemaker Evaluation Services 50-1
Cytotoxic Food Tests - Not Covered 50-2
His Bundle Study 50-3
Gravlee Jet Washer 50-4
Thermography 50-5
Plethysmography 50-6
Ultrasound Diagnostic Procedures 50-7
Consultation Services Rendered by a Podiatrist in a Skilled Nursing Facility 50-8
Gastrophotography 50-9
Vabra Aspirator 50-10
Computerized Tomography 50-12
Magnetic Resonance Imaging 50-13
Magnetic Resonance Angiography 50-14
Electrocardiographic Services 50-15
Hemorheograph 50-16
Laboratory Tests - CRD Patients 50-17
Electron Microscope 50-18
Pronouncement of Death 50-19
Diagnostic Pap Smears 50-20
Screening Pap Smears and Pelvic Examinations for Early Detection of Cervical Cancer or Vaginal Cancer 50-20.1
Mammograms 50-21
Challenge Ingestion Food Testing 50-22
Histocompatibility Testing 50-23
Hair Analysis 50-24
Esophageal Manometry 50-25
Dental Examination Prior to Kidney Transplantation 50-26
Xenon Scan 50-27
Hospital and Skilled Nursing Facility Admission Diagnostic Procedures 50-28
Cytogenetic Studies 50-29
Nuclear Radiology Procedure 50-30
Evoked Response Tests 50-31
Percutaneous Transluminal Angioplasty (PTA) 50-32
Uroflowmetric Evaluations 50-33
Obsolete or Unreliable Diagnostic Tests 50-34
Sweat Test 50-35
Positron Emission Transverse Tomography (PET or PETT) Scans 50-36
Noninvasive Tests of Carotid Function 50-37

Rev. 155
45-28  ANTIGENS PREPARED FOR SUBLINGUAL ADMINISTRATION

For antigens provided to patients on or after November 17, 1996, Medicare does not cover such antigens if they are to be administered sublingually, i.e., by placing drops under the patient's tongue. This kind of allergy therapy has not been proven to be safe and effective. Antigens are covered only if they are administered by injection.

45-29  INTRAVENOUS IRON THERAPY

Iron deficiency is a common condition in end stage renal disease (ESRD) patients undergoing hemodialysis. Iron is a critical structural component of hemoglobin, a key protein found in normal red blood cells (RBCs) which transports oxygen. Without this important building block, anemic patients experience difficulty in restoring adequate, healthy RBCs that improve hematocrit levels. Clinical management of iron deficiency involves treating patients with iron replacement products while they undergo hemodialysis. Body iron stores can be supplemented with either oral or intravenous (IV) iron products. The available evidence suggests that the mode of intravenous administration is perhaps the most effective treatment for iron deficiency in hemodialysis patients. Unlike oral iron products which must be absorbed through the GI tract, IV iron products are infused directly into the bloodstream in a form that is readily available to the bone marrow for RBC synthesis, resulting in an earlier correction of iron deficiency and anemia.

A. Effective December 1, 2000, Medicare covers sodium ferric gluconate complex in sucrose injection as a first line treatment of iron deficiency anemia when furnished intravenously to patients undergoing chronic hemodialysis who are receiving supplemental erythropoietin therapy.

B. Effective October 1, 2001, Medicare also covers iron sucrose injection as a first line treatment of iron deficiency anemia when furnished intravenously to patients undergoing chronic hemodialysis who are receiving supplemental erythropoietin therapy.

45-30  PHOTOSENSITIVE DRUGS

Photosensitive drugs are the light-sensitive agents used in photodynamic therapy. Once introduced into the body, these drugs selectively identify and adhere to diseased tissue. The drugs remain inactive until they are exposed to a specific wavelength of light, by means of a laser, that corresponds to their absorption peak. The activation of a photosensitive drug results in a photochemical reaction which treats the diseased tissue without affecting surrounding normal tissue.

Verteporfin

Verteporfin, a benzoporphyrin derivative, is an intravenous lipophilic photosensitive drug with an absorption peak of 690 nm. This drug was first approved by the Food and Drug Administration (FDA) on April 12, 2000, and subsequently, approved for inclusion in the United States Pharmacopoeia on July 18, 2000, meeting Medicare’s definition of a drug as defined under §1861(t)(1) of the Social Security Act. Effective July 1, 2001, Verteporfin (Q3013 – Injection, Verteporfin, 15 mg) is only covered when used in conjunction with ocular photodynamic therapy (see §35-100 PHOTODYNAMIC THERAPY) when furnished intravenously incident to a physician’s service. For patients with age-related macular degeneration, Verteporfin is only covered with a diagnosis of neovascular age-related macular degeneration (ICD-9-CM 362.52) with predominately classic subfoveal choroidal neovascular (CNV) lesions (where the area of classic CNV occupies = 50% of the area of the entire lesion) at the initial visit as determined by a fluorescein angiogram (CPT code 92235). Subsequent follow-up visits will require a fluorescein angiogram prior to treatment. There are no requirements regarding visual acuity, lesion size, and number of retreatments.

Rev. 155
45-31 INTRAVENOUS IMMUNE GLOBULIN FOR THE TREATMENT OF AUTOIMMUNE MUCOCUTANEOUS BLISTERING DISEASES

Intravenous immune globulin (IVIg) is a blood product prepared from the pooled plasma of donors. It has been used to treat a variety of autoimmune diseases, including mucocutaneous blistering diseases. It has fewer side effects than steroids or immunosuppressive agents.

Effective October 1, 2002, IVIg is covered for the treatment of biopsy-proven (1) Pemphigus Vulgaris, (2) Pemphigus Foliaceus, (3) Bullous Pemphigoid, (4) Mucous Membrane Pemphigoid (a.k.a., Cicatricial Pemphigoid), and (5) Epidermolysis Bullosa Acquisita for the following patient subpopulations:

1. Patients who have failed conventional therapy. Contractors have the discretion to define what constitutes failure of conventional therapy;

2. Patients in whom conventional therapy is otherwise contraindicated. Contractors have the discretion to define what constitutes contraindications to conventional therapy; or

3. Patients with rapidly progressive disease in whom a clinical response could not be affected quickly enough using conventional agents. In such situations IVIg therapy would be given along with conventional treatment(s) and the IVIg would be used only until the conventional therapy could take effect.

In addition, IVIg for the treatment of autoimmune mucocutaneous blistering diseases must be used only for short-term therapy and not as a maintenance therapy. Contractors have the discretion to decide what constitutes short-term therapy.
