

# Eligible Professional Medicaid EHR Incentive Program Modified Stage 2 Objectives and Measures for 2017 Objective 4 of 10

Updated: November 2016

Electronic Prescribing (eRx)	
<b>Objective</b>	Generate and transmit permissible prescriptions electronically (eRx).
<b>Measure</b>	More than 50 percent of permissible prescriptions written by the EP are queried for a drug formulary and transmitted electronically using CEHRT.
<b>Exclusions</b>	<p>Any EP who:</p> <ul style="list-style-type: none"> <li>• Writes fewer than 100 permissible prescriptions during the EHR reporting period; or</li> <li>• Does not have a pharmacy within his or her organization and there are no pharmacies that accept electronic prescriptions within 10 miles of the EP's practice location at the start of his or her EHR reporting period.</li> </ul>

## Table of Contents

- Definition of Terms
- Attestation Requirements
- Additional Information
- Regulatory References
- Certification and Standards Criteria

## Definition of Terms

**Prescription** – The authorization by an EP to a pharmacist to dispense a drug that the pharmacist would not dispense to the patient without such authorization.

**Permissible Prescriptions** – “Permissible prescriptions” may include or not include controlled substances based on provider selection and where allowable by state and local law.

## Attestation Requirements

DENOMINATOR/NUMERATOR/THRESHOLD/EXCLUSIONS

- DENOMINATOR: Number of permissible prescriptions written during the EHR reporting period for drugs requiring a prescription in order to be dispensed.
- NUMERATOR: The number of prescriptions in the denominator generated, queried for a drug formulary, and transmitted electronically using CEHRT.
- THRESHOLD: The resulting percentage must be more than 50 percent in order for an EP to meet this measure.
- EXCLUSIONS: Any EP who:
  - Writes fewer than 100 permissible prescriptions during the EHR reporting period; or

- Does not have a pharmacy within his or her organization and there are no pharmacies that accept electronic prescriptions within 10 miles of the EP's practice location at the start of his or her EHR reporting period.

## Additional Information

- The provider is permitted, but not required, to limit the measure of this objective to those patients whose records are maintained using certified EHR technology (CEHRT).
- Authorizations for items such as durable medical equipment, or other items and services that may require EP authorization before the patient could receive them, are not included in the definition of prescriptions. These are excluded from the numerator and the denominator of the measure.
- Instances where patients specifically request a paper prescription may not be excluded from the denominator of this measure. The denominator includes all prescriptions written by the EP during the EHR reporting period.
- As electronic prescribing of controlled substances is now possible, providers may choose to include these prescriptions in their permissible prescriptions where feasible and allowable by state and local law.
- An EP needs to use CEHRT as the sole means of creating the prescription, and when transmitting to an external pharmacy that is independent of the EP's organization such transmission must use standards adopted for EHR technology certification.
- EPs should include in the numerator and denominator both types of electronic transmissions (those within and outside the organization) for the measure of this objective.
- For purposes of counting prescriptions "generated and transmitted electronically," we consider the generation and transmission of prescriptions to occur concurrently if the prescriber and dispenser are the same person and/or are accessing the same record in an integrated EHR to creating an order in a system that is electronically transmitted to an internal pharmacy.
- Providers can use intermediary networks that convert information from the certified EHR into a computer-based fax in order to meet this measure as long as the EP generates an electronic prescription and transmits it electronically using the standards of CEHRT to the intermediary network, and this results in the prescription being filled without the need for the provider to communicate the prescription in an alternative manner.
- Prescriptions transmitted electronically within an organization (the same legal entity) do not need to use the NCPDP standards. However, an EP's EHR must meet all applicable certification criteria and be certified as having the capability of meeting the external transmission requirements of §170.304(b). In addition, the EHR that is used to transmit prescriptions within the organization would need to be CEHRT. For more information, refer to ONC's FAQ at <https://www.healthit.gov/policy-researchers-implementers/22-question-12-10-022>.
- Providers may limit their effort to query a formulary to simply using the function available to them in their CEHRT with no further action required. If a query using the function of their CEHRT is not possible or shows no result, a provider is not required to conduct any further manual or paper-based action in order to complete the query, and the provider may count the prescription in the numerator.
- EPs practicing at multiple locations are eligible for the exclusion if any of their practice locations that are equipped with CEHRT meet the exclusion criteria.
- EPs who are part of an organization that owns or operates its own pharmacy within the 10 mile radius are not eligible for the exclusion regardless of whether that pharmacy can accept electronic prescriptions from EPs outside of the organization.

## Regulatory References

- This objective may be found in Section 42 of the code of the federal register at 495.22 (e)(4)(i) and (ii). For further discussion please see [80 FR 62800](#).
- In order to meet this objective and measure, an EP must possess the capabilities and standards of CEHRT at 45 CFR 170.314(b)(3) and (a)(10).

## Certification and Standards Criteria

Below is the corresponding certification and standards criteria for electronic health record technology that supports achieving the meaningful use of this objective.

Certification Criteria*	
<b>§ 170.314(b)(3) Electronic prescribing</b>	Enable a user to electronically create prescriptions and prescription related information for electronic transmission in accordance with: <ul style="list-style-type: none"><li>• The standard specified in § 170.205(b)(2); and</li><li>• At a minimum, the version of the standard specified in § 170.207(d)(2).</li></ul>
<b>§ 170.314(a)(10) Drug formulary checks</b>	EHR technology must automatically and electronically check whether a drug formulary (or preferred drug list) exists for a given patient and medication.

*\*Depending on the type of certification issued to the EHR technology, it will also have been certified to the certification criterion adopted at 45 CFR 170.314 (g)(1), (g)(2), or both, in order to assist in the calculation of this meaningful use measure.*

Standards Criteria	
<b>§170.205(b)(2) Electronic Prescribing</b>	NCPDP SCRIPT Version 10.6.
<b>§170.207(d)(2) Medications</b>	RxNorm, a standardized nomenclature for clinical drugs produced by the United States National Library of Medicine, August 6, 2012 Release (incorporated by reference in § 170.299)
