Use of this template is voluntary / optional

Parenteral Nutritional Therapy

Progress Note Template Guidance

Purpose

This template is designed to assist a physician or Non-Physician Practitioner (NPP) in documenting a progress note for parenteral nutritional therapy eligibility and coverage. Documentation to support the need for parenteral nutrition is required for Medicare coverage of parenteral nutritional therapy. Documentation of medical necessity is essential and supports completion of a Detailed Written Order (DWO). The DWO designates the start of parenteral nutrition as a therapy for a Medicare beneficiary who has a confirmed diagnosed medical condition supporting the need for parenteral nutritional therapy. Coverage requires use of FDA-approved parenteral nutritional solution, pump/infusion kits, and supplies indicated for the treatment of your patients confirmed diagnosed medical condition. This template is available to the clinician and can be kept on file within the patient’s medical record or can be used to develop a progress note for use with the system containing the patient’s electronic medical record.

Patient Eligibility

Eligibility for coverage of parenteral nutritional therapy under Medicare requires a physician/NPP to establish that coverage criteria are met. This helps to ensure the parenteral nutritional solution, pump/infusion kits, and supplies to be provided and used are consistent with the physician’s/NPP’s order and supported by the documentation in the patient’s medical record.

The physician or NPP must document that the patient has a confirmed diagnosis supporting the need for parenteral nutrition to be delivered using FDA-approved solution, pump/infusion kits, and supplies indicated for the treatment of their medical condition.

National Coverage Determination (NCD) 100-03, §180.2, provides indications for coverage of enteral/parenteral nutritional therapy under Medicare (Note: information in italics is quoted directly):

Coverage of parenteral nutritional therapy under Part B requires that the beneficiary must have:

- A condition involving the small intestine and/or its exocrine glands which significantly impairs absorption of nutrients; or
- Motility disorder of the stomach and/or intestine impairing the ability of nutrients to be transported through the GI system.
  - The medical record must document objective evidence supporting the clinical diagnosis.

1 A Medicare allowed NPP as defined is a nurse practitioner, clinical nurse specialist, or physician assistant (as those terms are defined in section 1861 (aa) (5) of the Social Security Act) who is working in accordance with State law.
The beneficiary must have a permanent impairment. Parenteral nutrition will be denied as non-covered in situations involving temporary impairments.

NOTE: Permanence does not require a determination that there is no possibility that the beneficiary's condition may improve sometime in the future. If the judgment of the attending physician, substantiated in the medical record, is that the condition is of long and indefinite duration (ordinarily at least 3 months), the test of permanence is considered met.

(See the attached Appendices)

FDA-approved parenteral nutrition and related supplies can be accessed on the PDAC website: https://www.dmepdac.com/dmecsapp/

Completing the Parenteral Nutritional Therapy Progress Note Template does not guarantee eligibility and coverage but does provide guidance in support of parenteral nutrition ordered and billed to Medicare. This template may be used with the Parenteral Nutritional Therapy Laboratory Test Results Template and the Parenteral Nutritional Therapy Order Template.

Who can complete the Progress Note Template?

A physician or allowed NPP who is enrolled in Medicare and performed the in-person visit with the beneficiary establishing and documenting the need for parenteral nutritional therapy.

Note: If this template is used:

1) CDEs in black Calibri are required
2) CDEs in burnt orange Italics Calibri are required if the condition is met
3) CDEs in blue Times New Roman are recommended but not required

Version R1.0d
Parenteral Nutritional Therapy Progress Note Template

Patient information:

Parenteral nutritional therapy coverage questions:

Does the patient have a permanently (at least 3 months) impaired gastrointestinal tract involving the small intestine and/or its exocrine glands which significantly impairs absorption of nutrients; or a motility disorder of the stomach and/or intestine impairing the ability of nutrients to be transported through the GI system?  
_____Yes  _____No

If Yes, is there insufficient absorption of nutrients to maintain weight and strength commensurate with the patient’s overall health status?  
_____Yes  _____No

Can this be managed with:

alteration to composition of an enteral diet?  
_____Yes  _____No

using pharmacologic means to treat the etiology of the malabsorption  
_____Yes  _____No

Describe: ________________________________________________

Is it anticipated the patient’s condition (check all that apply):

_____ is considered a permanent impairment

_____ may improve sometime in the future

_____ is of long and indefinite duration (ordinarily at least 3 months)
The patient (check all that apply) (note: see Appendix A for specific documentation requirements):

_____ has undergone recent (within the past 3 months) massive small bowel resection leaving less than or equal to 5 feet of small bowel beyond the ligament of Treitz

_____ has short bowel syndrome that is severe enough that the beneficiary has net gastrointestinal fluid and electrolyte malabsorption such that on an oral intake of 2.5-3 liters/day the enteral losses exceed 50% of the oral/enteral intake and the urine output is less than 1 liter/day is due to a motility disorder (e.g., severe dysphagia following a stroke, etc.) and is not due to reasons such as anorexia or nausea associated with mood disorder, end-stage disease, etc.

_____ requires bowel rest for at least 3 months and is receiving intravenously 20-35 cal/kg/day for treatment of symptomatic pancreatitis with/without pancreatic pseudocyst, severe exacerbation of regional enteritis, or a proximal enterocutaneous fistula where tube feeding distal to the fistula isn't possible

_____ has complete mechanical small bowel obstruction where surgery is not an option

_____ is significantly malnourished (10% weight loss over 3 months or less and serum albumin less than or equal to 3.4 gm/dl) and has very severe fat malabsorption (fecal fat exceeds 50% of oral/enteral intake on a diet of at least 50 gm of fat/day as measured by a standard 72-hour fecal fat test)

_____ is significantly malnourished (10% weight loss over 3 months or less and serum albumin less than or equal to 3.4 gm/dl) and has a severe motility disturbance of the small intestine and/or stomach which is unresponsive to prokinetic medication and is demonstrated either:

_____ Scintigraphically (solid meal gastric emptying study demonstrates that the isotope fails to reach the right colon by 6 hours following ingestion), or

_____ Radiographically (barium or radiopaque pellets fail to reach the right colon by 6 hours following administration). These studies must be performed when the patient is not acutely ill and is not on any medication which would decrease bowel motility.

_____ is malnourished (10% weight loss over 3 months or less and serum albumin less than or equal to 3.4 gm/dl), and a disease and clinical condition has not responded to altering the manner of delivery of appropriate nutrients (e.g., slow infusion of nutrients through a tube with the tip located in the stomach or jejunum).

Describe patient condition noted above or other conditions requiring parenteral nutrition:

### Review of systems (Significant as per history of present problem and need for parenteral nutrition):

**General:**
- weight gain, weight loss, sleeping problems, fatigue, fever,
- chills, night sweats / diaphoresis
- other:

**Skin:**
- pressure ulcers, rashes, changes in nails/hair, eczema, pruritus,
- other:

**Lymphatic:**
- swollen glands/masses: in the neck, axilla, groin,
- other:

**Head:**
- fainting, dizziness, headaches,
- other:

**Eyes:**
- diplopia, glasses/contact lenses, redness/discharge, blurred vision,
- glaucoma, cataracts,
- other:

**Ears:**
- tinnitus, discharge, hearing loss,
- other:

**Nose:**
- epistaxis, sinus infections, discharge, polyps,
- other:

**Oral:**
- dysphagia, hoarseness, teeth/dentures,
- other:

**Neck:**
- lumps, pain on movement
- other:
