

List of Over-Utilized Codes

FY2006

The Comprehensive Error Rate Testing Program

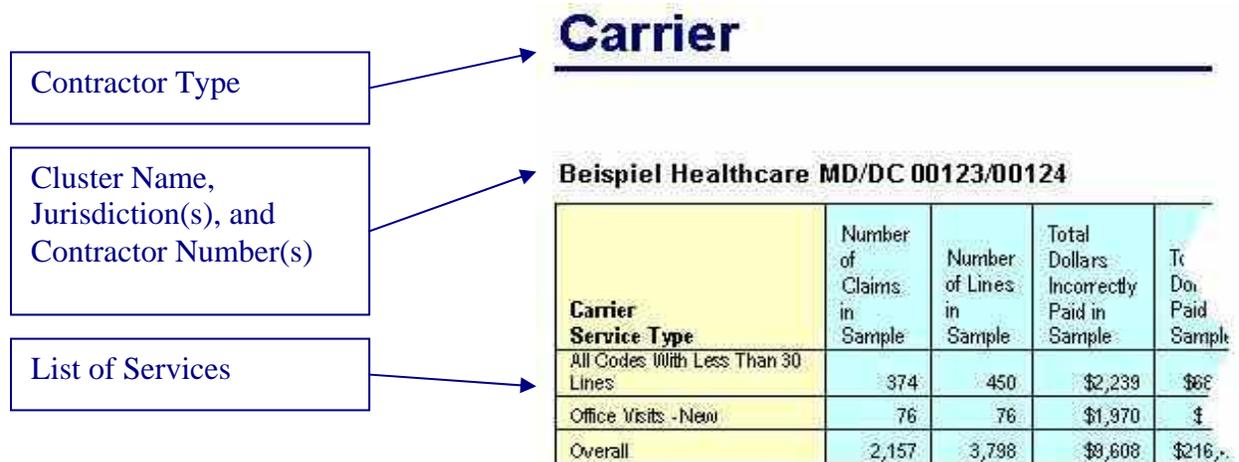

Introduction

On December 8, 2003, President George W. Bush signed into law the Medicare Prescription Drug, Improvement and Modernization Act (MMA) of 2003. MMA section 935 requires the Secretary to establish a process to notify classes of providers when a particular code is being over-utilized beginning 1 year after the date of enactment. In response to this requirement, the Centers for Medicare & Medicaid Services published the first annual list of over-utilized codes in 2004.

The list of over-utilized codes displays the top service codes that were found in error based on claims that were sampled by the Comprehensive Error Rate Testing (CERT) program. The list includes a section for each CERT cluster grouping of Medicare Carriers, Durable Medical Equipment Regional Carriers (DMERC), and Fiscal Intermediaries (FI). The service-types used are Berenson-Eggers Type of Service (BETOS) codes for Carriers, policy groups for DMERCs, and bill types for FIs. Within each cluster's list, the rows are sorted by projected dollars incorrectly paid. This list is produced annually, following the publication of the report of Improper Medicare FFS Payments.

About the Format:

Each list will contain a row labeled *Overall*. This row includes every service that was sampled and reviewed from the cluster, even the services that were not specifically listed.

A list may also contain a row labeled *All Codes With Less Than 30 Lines*. In order for a service to be included in the list, it must meet the threshold of 30 sampled lines. All services that did not meet the minimum are aggregated into the *All Codes With Less Than 30 Lines* category. The 30 line minimum is used to maintain statistical validity as well as to limit the number of rows in each list. For Fiscal Intermediaries, this row is labeled *All Codes With Less Than 30 Claims*.
