## Medicare Prior Authorization of Power Mobility Devices Demonstration Status Update

(Posted 05/21/2014)

The Medicare Prior Authorization of Power Mobility Devices (PMDs) Demonstration began on September 1, 2012 in California, Illinois, Michigan, New York, North Carolina, Florida and Texas.

## Preliminary Data

Since implementation, the Centers for Medicare & Medicaid Services (CMS) observed a decrease in expenditures for power mobility devices in the demonstration states and non-demonstration states. Based on claims processed from the inception of the pilot on September 1, 2012 through April 4, 2014, monthly expenditures for the power mobility device codes included in the demonstration decreased from \$20 million in September 2012 to \$6 million in December 2013 in the non-demonstration states and from \$12 million to \$3 million in the demonstration states<sup>1</sup>.

Data based on claims processed from the inception of the pilot on 09/01/2012 through 04/04/2014 Monthly data refresh date: 04/14/2014 (STARS IDR)

We believe the decrease in spending is due in part to national Durable Medical Equipment, Prosthetics, Orthotics, and Supplies (DMEPOS) suppliers adjusting their billing practices nationwide (not just in the demonstration states) and reflects suppliers complying with CMS policies based on their experiences with prior authorization in the demonstration states. The decrease in spending can also be attributed to the continuous DMEPOS supplier education and outreach mechanisms implemented by the Durable Medical Equipment Medicare Administrative Contractors (DME MACs) and CMS, and other initiatives<sup>2</sup> to prevent fraud and reduce expenditures for medically unnecessary PMDs.

<sup>1</sup> By law [Patient Protection and Affordable Care Act (PPACA) Section 6404], practitioners have up to one calendar year after the date of service to submit claims. Consequently, it will take over 12 months for claims figures to reach 100% completeness. Therefore, the figures for recent months (2013) will likely rise as more claims are submitted and processed in the coming months. This will have a disproportionate effect on the later months in 2013.

While we recognize that multiple factors contributed to the decrease in PMD expenditures, there was also a significant decrease in the number of beneficiaries receiving PMDs in the demonstration states after the start of the demonstration. We believe this decrease is because prior authorization is ensuring that only beneficiaries who meet Medicare requirements receive a PMD.

- Between September 1, 2012 and December 31, 2013 the number of beneficiaries receiving a PMD in the 7 demonstration states decreased by 75%.
- During the same time period the number of beneficiaries receiving a PMD in the non-demonstration states decreased by 66%.

As of December 31, 2013, prior authorization requests were submitted for over 36,201 Medicare beneficiaries. The requests were affirmed for all beneficiaries who met all the requirements. Roughly 50% of requests were non-affirmed because the beneficiaries do not qualify for the benefit based on the documentation submitted, which illustrates the importance of this demonstration. The prior authorization provides more assurance to the beneficiary that the PMD is covered by Medicare and thus they may have minimal out of pocket costs, such as the usual copay.

Preliminary demonstration data on requests received, as of December 31, 2013, indicate(s):

- The DME MACs are conducting the prior authorization reviews timely (within 10 business days for initial submissions and 20 business days for resubmissions).
- 2,537 of the 44,030 prior authorization requests were submitted electronically through CMS's Electronic Submission of Medical Documentation program.
- Overall, spending for PMDs has decreased by \$202 million (assuming that the monthly expenditures for PMDs would have remained constant at \$32 million per month) since the inception of the demonstration.

## Feedback

Overall the industry's feedback has been positive. Several DMEPOS suppliers have suggested prior authorization helps their business by providing a more predictable cash flow and improved relationships with the ordering physician. These DMEPOS suppliers have expressed support for the demonstration and would like it to be expanded to other states and items.

Feedback from beneficiaries has been largely positive. Prior to implementation, CMS spoke to numerous Medicare beneficiary groups that expressed support for the demonstration. Also, the DME MAC customer service representatives were well informed and prepared to handle Medicare beneficiaries' questions prior to the implementation of the demonstration.

## Further Efforts

The CMS will continue to monitor and evaluate the effectiveness of the demonstration and analyze demonstration data to assist in the investigation and prosecution of fraud.
