¹For hospitals participating in the Medicare prospective payment system, the hospital case-mix index is a relative measure of the hospital's average cost per case relative to the average cost per case for all hospitals in some base or reference year. The case-mix index is presented by selected provider categories to provide a means for comparing the relative complexity, severity of illness, and costliness of the cases handled in each of these provider classifications.

²Includes discharges from short-stay hospitals in the 50 States and District of Columbia; excludes discharges from short-stay hospitals in all outlying areas.

NOTES: The Medicare SSH use and cost data presented in this table are slightly different from comparable national totals shown in other tables in this section since two different sample data files were utilized to generate the data. Numbers may not add to total because of rounding.
