

## **Inpatient Rehabilitation Facility (IRF) Quality Reporting Program (QRP) Technical Information - Archives**

### **Data Collection Software: The jIRVEN**

The Inpatient Rehabilitation Validation and Entry System (jIRVEN) was developed by the Centers for Medicare & Medicaid Services (CMS). jIRVEN is a free Java-based software application, which provides an option for Inpatient Rehabilitation Facilities (IRFs) to collect and maintain Patient Assessment Instrument (PAI) information. jIRVEN displays the IRF-PAI similar to the paper version of the forms. Facilities are able to enter and subsequently export their data from the application for submission to the appropriate national data repository. Please consult the jIRVEN Installation and User Guides for additional information. Access the [IRF PPS Software](#) webpage for more information related to jIRVEN software and related updates.
