

Long-Term Care Hospital Quality Reporting Program (LTCH QRP)

Overview of Data Elements Used for Reporting Assessment-Based Quality Measures and Standardized Patient Assessment Data Elements Affecting FY 2025 Annual Update Determination

Page 1 of 12

The Centers for Medicare & Medicaid Services' (CMS) Long-Term Care Hospital Quality Reporting Program (LTCH QRP) requires LTCHs to submit quality measure and standardized patient assessment data elements to CMS. For a given data submission period, the LTCH Continuity Assessment Record and Evaluation (CARE) Data Set (LCDS) assessments submitted by an LTCH must meet the Annual Update (i.e. the Annual Payment Update (APU)) minimum data completion threshold of no less than 80 percent of the LCDS assessments having 100 percent completion of the required LTCH QRP data elements. These are the standardized patient assessment data elements and the data elements needed to calculate the LTCH QRP quality measures. Successful assessment completion means that the assessment does not contain non-informative responses, i.e., “dash” (–) for required data elements. **Please note that while the coding of a “dash” is an optional response value for many of the data elements listed in this table, its use does not count toward meeting the APU minimum data completion threshold.** Failure to meet the minimum threshold may result in a two (2) percentage point reduction in the LTCH's APU.

Below is a table indicating the LCDS data elements that are used in determining the APU minimum data completion threshold for the FY 2025 LTCH QRP determination. The last column under “Data Collection Periods (CY 2023)” provides the data elements for the current version of the LCDS, and reflect the appropriate reporting periods.

An “X” in the table below indicates the valid assessment type and data collection reporting periods. For detailed measure specifications, please refer to the documents listed under “References” below.

Note: This table is limited to the data elements that are used for determining LTCH QRP compliance and are included in the APU data completion threshold. There are additional data elements used to risk adjust the quality measures used in the LTCH QRP. Failure to submit all data elements used to calculate and risk adjust a quality measure can affect your LTCH's quality measure calculations that are displayed on the Compare website.
