

Health Insurance Exchanges Quality Rating System (QRS) for Plan Year (PY) 2025: Results at a Glance

The Quality Rating System (QRS) is a quality reporting program for comparing the performance of Qualified Health Plans (QHP) offered on Exchanges that considers both the quality of healthcare services provided and the health plan administration.¹ The QRS is based on relative performance to top performing reporting units per measure that are eligible to be scored in a given plan year. The method for assigning quality ratings results in high and low performers.

Issuers offering QHPs through the Exchanges that meet certain participation criteria are required to submit quality data to CMS for each unique product type offered in a State, called a reporting unit (Issuer ID-State-Product Type). Product types subject to the QRS requirements include Exclusive Provider Organization (EPO), Health Maintenance Organization (HMO), Point of Service (POS), and Preferred Provider Organization (PPO).²
