HFPP AT-RISK ANALYSIS INSIGHTS

September 2026

Remote Physiologic and Therapeutic Monitoring

This analysis, Remote Physiologic and Therapeutic Monitoring (RPM/RTM)*, reviewed high-risk outliers from January 2025 to May 2026 and detailed findings were shared with appropriate HFPP partners in July 2026. It focused on services that may not have been provided or were billed in excess. A set of 17 CPT/HCPCS codes** were used to flag when RPM/RTM services exceeded expected frequency limits, initial set up services were billed with no subsequent monitoring services, and RPM/RTM services were billed during an inpatient or skilled-nursing facility stay. Any at-risk amounts are attributed to the billing provider. While these services offer significant value in managing chronic conditions and improving patient outcomes, they are increasingly vulnerable to fraud, waste, and abuse.

*Remote physiologic monitoring (RPM) and remote therapeutic monitoring (RTM) are non-face-to-face services that allow providers to monitor patient health data via FDA-cleared devices outside of traditional clinical settings. RPM/RTM services associated with fraud are where bad actors bill for such services without monitoring or delivering the required medical devices.

TOTAL AT-RISK DOLLARS IDENTIFIED: $68M*

Federal
All Partners had results
At-Risk Dollars: $43.1M

State Medicaid
64% of Partners had results
At-Risk Dollars: $2.4M

Private
72% of Partners had results
At-Risk Dollars: $22.5M

RESULTS OVERVIEW

350K Patients
With At-Risk Claims

972K Claim Lines
Identified as At-Risk

454 Providers
With At-Risk Claims

22 Providers At-Risk
With 10 or More Partners

RECOMMENDED ACTION:

Information provided should be reviewed by Partners to determine if actions should be taken to mitigate past or ongoing fraud, waste, and abuse. HFPP Partners should compare findings with their own payment policies and claim edits.
