

Increasing Organ Transplant Access Model

6-year Mandatory Model: July 1, 2025 to June 30, 2031

The Increasing Organ Transplant Access Model is designed to increase kidney transplants for people with end-stage renal disease. Transplant hospitals selected to participate in the mandatory model receive support to offer greater care coordination, improve quality of care, and address health-related social needs for patients with kidney disease awaiting a transplant.

Model Goals

- ▶ Improve quality of care before, during and after transplantation.

- ▶ Improve care coordination and patient-centeredness in the kidney transplant process.

- ▶ Maximize the use of deceased donor kidneys.

- ▶ Create a more accessible transplant process.

- ▶ Identify more living donors and assist potential living donors through the donation process.

- ▶ Reduce barriers to care and address health disparities.

Did You Know?

Around **90,000 people** were on the waitlist for a kidney transplant in the U.S. in 2023, but only about 28,000 kidney transplants were performed during that time.

Kidney transplant waitlist 3-5 years or longer to receive a transplant

Approximately **5,000 people die each year** while waiting for a kidney transplant.
