

LTCH Data Submission Specifications

Errata Version 4.10.2 for Final Data Specifications V4.10.0

Errata History

Date	Changes Made
03/10/2026	Issues 01 and 02 were added.
09/09/2026	Issues 03 and 04 were added.

Issue(s) Added:

Issue ID	Problem	Resolution	Status
01	Edit -3745 was inadvertently omitted from the data specifications, while still being active in iQIES. It has been restored to the data specifications...but must be replaced, since it referenced deleted item A0800 (Gender).	Edit -3745 will be deleted and replaced with edit -4048. The new edit will read exactly as edit -3745 did, except that it will reference A0810 (Sex) instead of A0800 (Gender).	This change will be made in the next version of the LTCH Data Submission Specs. It will be implemented in production for the upcoming iQIES release on 10/01/2026.
02	Since the dash [-] will be allowed as a valid value for the D0150 frequency items, these items must now be mapped to the APU warning edit (-3900).	The following items will now be mapped to the APU warning edit -3900: D0150A2, D0150B2, D0150C2, D0150D2, D0150E2, D0150F2, D0150G2, D0150H2, D0150I2.	This change will be made in the next version of the LTCH Data Submission Specs. It will be implemented in production for the upcoming iQIES release on 10/01/2026.

Issue ID	Problem	Resolution	Status
03	Item O0350 will be voluntary as of 10/01/2026. Therefore, the item will no longer need an APU warning edit if the value submitted is a dash [-].	The mapping of item O0350 to edit -3900 will be deleted.	This change will be made in the next version of the LTCH Data Submission Specs. It will be implemented in production for the upcoming iQIES release on 10/01/2026.
04	Item GG0170I1 currently has the caret [^] as an allowed value in the data specifications. This value should not be allowed, since it has not been part of a skip pattern since the removal of GG0170H1 several versions ago.	The caret [^] will be removed as an allowed value for item GG0170I1.	This change will be made in the next version of the LTCH Data Submission Specs. It will be implemented in production for the upcoming iQIES release on 10/01/2026. This change is RETROACTIVE for assessments with effective date 10/01/2024 and later.
