## Chapter I General Rebundling Policies

#### A. Introduction

The Physicians' Current Procedural Terminology (CPT-4) developed by the American Medical Association is a listing of descriptive terms and identifying codes for reporting medical services and procedures performed by physicians. The codes are updated annually by the CPT-4 Editorial Panel based on input from the AMA Advisory Committee which serves as a channel for requests from various providers and specialty societies. The purpose of the coding system and annual update is to communicate specific services rendered by physicians, usually for the purpose of claim submission to third party (insurance) carriers. A multitude of codes are necessary because of the wide spectrum of services provided by various medical care providers. Because many medical services can be rendered by different methods and combinations of various procedures, multiple codes describing similar services are frequently necessary to accurately reflect what service a physician performs. While often only one procedure is performed at a patient encounter, multiple procedures are performed at the same session at other times. In the latter case, the pre-procedure and post-procedure work does not have to be repeated and, therefore, a comprehensive code, describing the multiple services commonly performed together, can be defined.

Third party payers have adopted the CPT-4 coding system for use by providers to communicate reimbursable services. It therefore becomes more important to identify the various potential combinations of services to accurately adjudicate claims. The following policies encompass general issues/coding principles that are to be applied in all subsequent chapters. Specific examples are stated to clarify the policy but do not represent the only code or service that is included in the policy.

## B. Coding Based on Standards of Medical/Surgical Practice

In order for this system to be effective, it is essential that the coding description accurately describe what actually transpired at the patient encounter. Because many physician activities are so

integral to a procedure, it is impractical and unnecessary to list every event, common to all procedures of a similar nature, as part of the narrative description for a code. Many of these common activities reflect simply normal principles of medical/surgical care. These "generic" activities are assumed to be included as acceptable medical/surgical practice and, while they could be performed separately, they should not be considered as such when a code narrative is defined. Accordingly, all services integral to accomplishing a procedure will be considered bundled into that procedure and, therefore will be considered a component & part of the comprehensive code.

Many of these generic activities are common to virtually all procedures and, on other occasions, some are integral to only a certain group of procedures but are still essential to accomplish these particular procedures. Accordingly, it would be inappropriate to separately code these services based on standard medical and surgical principles.

Some examples of generic services integral to standard medical/surgical services would include:

- Cleansing, shaving and prepping of skin
- Draping of patient; positioning of patient
- Insertion of intravenous access for medication
- Sedative administration by the physician performing the procedure (see Chapter II, Anesthesia section, for the separate policy)
- Local, topical or regional anesthetic by physician performing procedure
  - Surgical approach, including identification of anatomical landmarks, incision, evaluation of the surgical field, simple debridement of traumatized
    - tissue, lysis of simple adhesions, isolation of neurovascular, muscular (including stimulation for identification), bony or other structures limiting access to surgical field.
- Surgical cultures
- Wound irrigation
- Insertion and removal of drains, suction devices, dressings, pumps into same site
- Surgical closure

- Application, management, and removal of post-operative dressings including analgesic devices (peri-incisional TENS unit, institution of Patient Controlled Analgesia)
- Pre-operative, intra-operative and post-operative documentation, including photographs, drawings, dictation, transcription.
- Surgical supplies, unless excepted by existing HCFA policy.

In the case of individual services, there are numerous specific services that may typically be involved in order to accomplish a comprehensive procedure. Generally, performance of these services represents the standard of practice for a more comprehensive procedure and the services are therefore to be bundled together.

Because many of these services are unique to individual CPT-4 coding sections, the rationale for rebundling will be described in that particular section. The principle of the policy to include these services into the comprehensive procedure remains the same as the principle applied to the generic service list noted above. Specifically, these principles include:

- 1. The service represents the standard of care in accomplishing the overall procedure.
- 2. The service is necessary to successfully accomplish the comprehensive procedure; failure to perform the service may compromise the success of the procedure.
  - 3. The service does not represent a separately identifiable procedure unrelated to the comprehensive procedure planned.

Specific examples include: Medical:

- 1. Procurement of a rhythm strip in conjunction with an electrocardiogram. The rhythm strip would not be separately billed.
- Procurement of upper extremity (brachial) doppler study in addition to lower extremity doppler study in order to obtain an

"ankle-brachial index" (ABI). The upper extremity doppler would not be separately billed.

3. Procurement of an electrocardiogram as part of a cardiac stress test. The electrocardiogram would not be separately billed.

## Surgical:

- 1. Removal of a cerumen impaction prior to myringotomy. The cerumen impaction is precluding access to the tympanic membrane and its removal is necessary for the successful completion of the myringotomy.
- 2. Performance of a bronchoscopy prior to a thoracotomy and lobectomy. Assuming that a diagnostic bronchoscopy has already been performed for diagnosis and biopsy and the surgeon is simply evaluating for anatomic assessment for sleeve or more complex resection, the bronchoscopy would not be separately billed. Essentially, this "scout" endoscopy represents a part of the assessment of the surgical field to establish anatomical landmarks, extent of disease, etc.
- 3. Lysis of adhesions and exploratory laparotomy billed with colon resection or other abdominal surgery. These procedures represent gaining access to the organ in question and are not separately billed.

#### C. Medical/Surgical Package

As a result of the variety of surgical, diagnostic and therapeutic non-surgical procedures commonly performed in medical practice, the extent of the CPT-4 manual has grown. The need of precise definitions for the various combinations of services is further warranted because of the dependence of providers on CPT-4 coding for billing to third party payers. When a Resource Based Relative Value System (RBRVS) is used in conjunction with CPT-4 coding, the necessity for accurate coding is amplified.

In general, most services have pre-procedure and post-procedure work associated with them; when performed at a single patient encounter, the pre-procedure and post-procedure work is relatively

fixed regardless of the number of services actually performed at that session. Additionally, the nature of the pre-procedure and post-procedure work is reasonably consistent across the spectrum of procedures.

In keeping with the policy that the work typically associated with a standard surgical or medical service is included in the CPT-4 manual code description of the service, some general guidelines can be developed. With few exceptions these guidelines transcend a majority of CPT-4 descriptions, irrespective of whether the service is limited or comprehensive.

A majority of invasive procedures require the availability of vascular and/or airway access; accordingly, the work associated with obtaining this access is included in the pre-procedure services and returning a patient to the appropriate post-procedure state is included in the procedural services. Intravenous access, intra-arterial access, airway access (e.g., HCPCS/CPT-4 codes 36000, 36140, 36400, 36410, G0001) are frequently necessary; accordingly, CPT-4 codes describing these services are not separately billed when performed in conjunction with a more comprehensive procedure. Airway access is associated with general anesthesia, and no CPT-4 code is available for elective intubation. The CPT-4 code 31500 is not to be billed for elective intubation in anticipation of performing a procedure as this represents a code for providing the service of emergency intubation. Furthermore, CPT-4 codes describing services to gain visualization of the airway (nasal endoscopy, laryngoscopy, bronchoscopy) were created for the purpose of coding a diagnostic or therapeutic service and are not to be billed as a part of intubation services.

When vascular access is obtained, the access generally requires maintenance of an infusion or use of an anticoagulant injection (heparin lock) (e.g. CPT-4 codes 90780 - 90784). These services are necessary for the maintenance of the access and are not to be separately billed. Additionally, use of an anticoagulant for access maintenance cannot be separately billed (e.g. CPT-4 code 37201).

In some situations, more invasive access services (central venous access, pulmonary artery access) are inevitably performed with a specific type of procedure. Because this is not typically the case, the codes referable to these services may be separately billed.

Placement of central access devices (central lines, pulmonary artery catheters, etc.) involve passage of catheters through central vessels and, in the case of PA catheters, through the right ventricle; additionally, these services often require the use of fluoroscopic support. Separate billing of CPT-4 codes for right heart catheterization, first order venous catheter placement or other services which represent a separate procedure, is not appropriate when the CPT-4 code that describes the access service is billed. General fluoroscopic services necessary to accomplish routine central vascular access cannot be separately billed unless a specific CPT-4 code has been defined for this service (e.g. CPT-4 code 71038).

- 2. When anesthesia is provided by the physician performing the primary service, the anesthesia services are included in the primary procedure (HCFA Global Surgery Policy). If it is medically necessary for a separate provider (anesthesiologist/anesthetist) to provide the anesthesia services (e.g. monitored anesthesia care), a separate service may be billed.
- 3. Most procedures require cardiopulmonary monitoring, either by the physician performing the procedure or an anesthesiologist /anesthetist. Because these services are integral and routine, they are not to be separately billed. This may include cardiac monitoring, intermittent EKG procurement, oximetry or ventilation management (e.g. CPT-4 codes 93000, 93005, 93040, 93041, 94656, 94760, 94761, 94770). These services, when integral to the monitoring service, are not to be separately billed.
- 4. When, in the course of a procedure, samples of blood are obtained for analysis (e.g. electrolyte determination, blood gas determination, end-tidal  $\rm CO_2$ ), a separate service for sample procurement cannot be billed. When a laboratory service is provided, a significant, separately identifiable service is performed, and may be separately billed.
- 5. When, in the course of a procedure, a biopsy is obtained and subsequently excision, removal, destruction or other elimination of the biopsied lesion is accomplished, a separate service cannot be billed for the biopsy as this represents part of the removal. When similar lesions are biopsied, only one biopsy service should be billed. On the other hand, if a distinct or different lesion is identified, a biopsy service may be separately billed with the "DS"

modifier, indicating a different service was performed or a different site was biopsied (see section E part 3 of Chapter 1 for definition of the "DS" modifier). The medical record (e.g., operative report) should indicate the distinct nature of this service. If separate biopsy services are performed on separate lesions, and it is felt to be medically necessary to submit separate pathologic specimens, the medical record should identify the precise location of each biopsy site.

- 6. In the performance of a surgical procedure, it is routine to explore the surgical field to determine the anatomic nature of the field and evaluate for anomalies. Accordingly, codes describing exploratory procedures (e.g., CPT-4 code 49000 cannot be separately billed). If a finding requires extension of the surgical field and it is followed by another procedure unrelated to the primary procedure, this service may be separately billed using the appropriate CPT-4 code and modifiers.
- 7. When a definitive surgical procedure requires access through abnormal tissue (e.g., diseased skin, abscess, hematoma, seroma, etc.), separate services for this access (e.g., debridement, incision and drainage) are not billed. For example, if a patient presents with a pilonidal cyst and it is determined that it is medically necessary to excise this cyst, it would be appropriate to submit a bill for CPT-4 code 11770 (excision of pilonidal cyst); it would not, however, be appropriate to also bill for CPT-4 code 10080 (incision and drainage of pilonidal cyst), as it was necessary to perform the latter to accomplish the primary procedure.
- 8. When an excision and removal is performed ("-ectomy" code), the approach generally involves incision and opening of the organ ("-otomy" code). The incision and opening of the organ or lesion cannot be separately billed when the primary service is the removal of the organ or lesion.
- 9. There are frequently multiple approaches to various procedures, and are often clusters of CPT-4 codes describing the various approaches (e.g. vaginal hysterectomy as opposed to abdominal hysterectomy). These approaches are generally mutually exclusive of one another and, therefore, not to be billed together for a given encounter. Only the definitive, or most comprehensive, service performed can be billed. Endoscopic procedures are often

performed as a prelude to, or as a part of, open surgical procedures. When an endoscopy represents a distinct diagnostic service prior to an open surgical service and the decision to perform surgery is made on the basis of the endoscopy, a separate service for the endoscopy may be billed.

10. When an endoscopic service is performed to establish the location of a lesion, confirm the presence of a lesion, establish anatomic landmarks, or define the extent of a lesion, the endoscopic service is not separately billed as it is a medically necessary part of the overall surgical service. Additionally, when an endoscopic service is attempted and fails and another surgical service is necessary, only the successful service is billed. For example, if a laparoscopic cholecystectomy is attempted and fails and an open cholecystectomy is performed, only the open cholecystectomy can be billed.

11. A number of CPT-4 codes describe services necessary to address the treatment of complications of the primary procedure (e.g., bleeding or hemorrhage). When the services described by CPT-4 codes as complications of a primary procedure require a return to the operating room, they may be billed separately; generally, due to global surgery policy, they should be billed with the "78" modifier indicating that the service necessary to treat the complication required a return to the operating room during the postoperative period. When a complication described by codes defining complications arises during an operative session, however, a separate service for treating the complication is not to be billed. An operative session ends upon release from the post-anesthesia recovery area.

# D. Coding Services Supplemental to a Principal Procedure (Addon Codes)

The CPT-4 coding system identifies certain codes which are to be submitted in addition to other codes. Generally, these are identified with the statement "list separately in addition to code for primary procedure" in parentheses and other times the supplemental code is to be used only with certain primary codes which are parenthetically identified. The basis for these CPT-4 codes is to enable providers to separately identify a service that is performed in certain situations as an additional service.

Supplemental codes frequently specify codes or ranges of codes with which they are to be used. It would be inappropriate to use these with codes other than those specified.

On occasion, a procedure described by a CPT-4 code is modified or enhanced, either due to the unique nature of the clinical situation or due to advances in technology since the code was first published. When CPT-4 codes are not labeled as supplemental codes in the manner described above, they are not to be billed unless the actual procedure is, in fact, performed. Using non-supplemental codes that approximate part of a more comprehensive procedure but do not describe a separately identifiable service is not appropriate.

Example: If, in the course of interpreting an echocardiogram, an ejection fraction is estimated, it would be inappropriate to code a cardiac blood pool imaging with ejection fraction determination (CPT-4 code 78472) in addition to an echocardiography code (CPT-4 code 93307.) Although the cardiac blood pool imaging does determine an ejection fraction, it does so by nuclear gating techniques which are not used in an echocardiogram.

In other cases codes are interpreted as being supplemental to a primary code without an explicit statement in CPT-4 manual that the code is supplemental. Unless the code is explicitly identified in such a fashion, it would be improper as a coding convention to submit a primary procedure code as a supplemental code.

## E. Modifiers

In order to expand the information provided by CPT-4 codes, a number of modifiers have been created by the AMA, HCFA, and local Medicare carriers. These modifiers, in the form of two digits, either numbers, letters, or a combination of each, are intended to transfer specific information regarding a certain procedure or service. Modifiers are attached to the end of a HCPCS/CPT-4 code and give the physician a mechanism to indicate that a service or procedure has been modified by some circumstance but is still described in the code definition.

Like CPT-4 codes, the use of modifiers (either AMA, HCFA or locally-defined modifiers) requires explicit understanding of the purpose of each modifier. It is also important to identify when

the purpose of a modifier has been expanded or restricted by a third party payer. It is essential to understand the specific meaning of the modifier by the payer to which a claim is being submitted before using it.

- 1. The "22" modifier is identified in the CPT-4 manual as unusual procedural services. By definition, this modifier would be used in <u>unusual</u> circumstances; routine use of the modifier is inappropriate as this practice would suggest cases routinely have unusual circumstances. When an unusual or extensive service is provided it is more appropriate to employ the "22" modifier than to bill a separate code that does not accurately describe the service provided.
- A new modifier, referred to in this policy as the "DS" modifier, is being proposed to be used when several procedures are performed on different anatomical sites, on different sides of the body, or at different sessions (on the same day). When these services are billed, there will be the appearance that the procedures were performed on a patient by the same physician on the same day, which may give the appearance of "unbundling," when, in fact, the services were performed under circumstances which did not involve this practice at all. Because carriers cannot identify this based simply on CPT-4 coding on either electronic or paper claims, it is proposed that this modifier be established to permit claims of such a nature to bypass rebundling edits if the modifier is present. The proposed modifier, which is used throughout this document, is referred to as the "DS" modifier. It indicates that the procedure represents a "distinct procedure or service from others billed on the same date of service." This may represent a different session, different surgery, different site, different lesion, different injury or area of injury (in extensive injuries). Frequently, another, already established, modifier has been defined that describes this situation more specifically; in the event that a more descriptive modifier is available, it should be used in preference to the "DS" modifier.

Example: If a patient requires placement of a flow directed pulmonary artery catheter for hemodynamic monitoring via the subclavian vein, it would be appropriate to submit the CPT-4 code 93503 (Insertion and placement of flow directed catheter, e.g., Swan-Ganz for monitoring purposes) for the service. If, later in the day, the catheter must be removed and a central venous catheter

is inserted through the femoral vein, the appropriate code for this service would be CPT-4 code 36010 (Introduction of catheter, superior or inferior vena cava). Because the PA catheter requires passage through the vena cava, it may appear that the service for the PA catheter was being "unbundled" if both services were billed on the same day. Accordingly, the central venous catheter code should be billed with the "DS" modifier (CPT-4 code 36010-DS) indicating that this catheter was placed in a different site as a different service on the same day.

Other examples of the appropriate use of the "DS" modifier are contained in the individual chapter policies.

## F. Excluded Services

Because some procedures are identified as excluded from coverage under the Medicare program as "excluded services," there is no need to address the issue of rebundling with these codes. A list of CPT-4 codes which represent status N codes on the Medicare Fee Schedule Data Base has been included. In the development of National Rebundling Policy and Rebundling Edits, these excluded services have been ignored.

## CURRENT EXCLUDED SERVICES

11975	11977	48160	48550	48554	55970

#### G. CPT-4 Procedure Code Definition

The format of the CPT-4 manual includes descriptions of procedures which are, in order to conserve space, not listed in their entirety for all procedures. The partial description is indented under the main entry, and constitutes what is always followed by a semicolon in the main entry. The main entry then encompasses the portion of the description preceding the semicolon. The main entry applies to and is a part of all indented entries which follow with their codes. An example is:

70120 Radiologic examination, mastoids; less than three views per side
70130 Complete, minimum of three views per side.

The common portion of the description is "radiologic examination, mastoids" and this description is considered a part of both codes. The distinguishing part of each of these codes is that which follows the semicolon.

In the course of other procedure descriptions, the code definition specifies other procedures that are included in this comprehensive code. CPT-4 procedure code 29855 is an example of this. By stating in the code description that the code includes arthroscopy, it follows that any knee arthroscopy codes (CPT-4 codes 29871-29898) cannot be billed with CPT-4 code 29855.

In addition, a code description may define a rebundling relationship where one code is a part of another based on the language used in the descriptor. Some examples of this type of rebundling by code definition are:

1. "Partial" and "complete" CPT-4 codes are billed. The partial procedure is bundled into the complete procedure.

- "Partial" and "total" CPT-4 codes are billed. The partial procedure is bundled into the total procedure.
- 3. "Unilateral" and "bilateral" CPT-4 codes are billed. The unilateral procedure is bundled into the bilateral procedure.
- "Single" and "multiple" CPT codes are billed. The single procedure is bundled into the multiple procedure.

## H. CPT-4 Coding Manual Instruction/Guideline

Each of the six major sections of the CPT-4 manual and several of the major subsections include guidelines that are unique to that section. These directions are not all inclusive of nor limited to, definitions of terms, modifiers, unlisted procedures or services, special or written reports, details about reporting separate, multiple or starred procedures and qualifying circumstances. These instructions appear in various places and are found at the beginning of each major section, at the beginning of sub-sections, and before or after a series of codes or individual codes. They define items or provide explanations that are necessary to appropriately interpret and report the procedures or services and to define terms that apply to a particular section. Notations are made in parentheses when CPT-4 codes are deleted or crossreferenced to another similar code so that the provider has better guidance in the appropriate assignment of a CPT-4 code for the service.

## I. Separate Procedure

The narrative for many CPT-4 codes includes a parenthetical statement that the procedure represents a "separate procedure". The inclusion of this statement indicates that the procedure, while possible to perform separately, is generally included in a more comprehensive procedure and the service is not to be billed when a related, more comprehensive, service is performed. The "separate procedure" designation is used with codes in the surgery (CPT-4 codes 10000-69999), radiology (CPT-4 codes 70000-79999) and medicine (CPT-4 codes 90000-99199) sections. When a related procedure from the same section, subsection, category or subcategory is performed, a code with the designation of "separate procedure" is not to be billed with the primary procedure. Each separate procedure performed with a service from the same numerical

section should not be billed (e.g., 11100 with 10000 codes, 20650 with 20000 codes, etc.)

For example, if the code identified as a "separate procedure" is billed with a code from the same numerical section, such as when an excision of a flexor tendon of the finger (CPT-4 code 26180 is billed with another surgery code from the 20000 section, then the excision of the tendon (separate procedure) should not be billed. By definition the "separate procedure" is commonly performed as integral and part of a larger service and usually represents a procedure that the physician performs through the same incision or orifice, at the same site, or using the same approach.

In the case where a separate procedure is performed on the same day but at a different session, or different site, this code may be billed with a more comprehensive service but the "DS" modifier should be included indicating that this service was, in fact, a separate service.

In other sections of the CPT-4 manual, the word "separate" is used with a term defined as "separate or multiple procedures" with a different meaning.

The following list contains the codes of the procedures in the 1994 and 1995 CPT-4 manual currently designated as "separate procedures."

Separa	t.e	Procedures

11100	11101	11755	19100	20500	20650
20660	20670	21050	21060	21070	21100

#### J. Designation of Sex

Many procedure codes have a sex designation within their narrative. These codes are not billed with one another because this would reflect a conflict in sex classification either by the definition of the code descriptions themselves (as they appear in the CPT-4 manual) or by the fact that the performance of these procedures on the same beneficiary would be anatomically impossible.

The obvious sections that this pertains to are the male and female genital procedures. Other codes indicate in their definition that a particular sex is required for the use of that particular code. An example of this situation would be CPT-4 code 53210 for total urethrectomy including cystostomy in a female as opposed to CPT-4 code 53215 for the male. Both of these procedures are not to be billed together. Some other examples of these code pairs are: 52275-52270, 53210-53250, 57260 and A4327-A4326.

#### K. Family of Codes

In a family of codes, there are two or more component codes that are not billed separately because they are included in a more comprehensive code as members of the code family. Comprehensive codes include certain services that are separately identifiable by other component codes. The component codes as members of the comprehensive code family represent parts of the procedure that should not be listed separately when the complete procedure is done. However, the component codes are considered individually if performed independently of the complete procedure and if not all the services listed in the comprehensive codes were rendered to make up the total service. A list of examples of code families is included although this does not reflect a total listing of all possible code families as defined in the CPT-4 manual.

## FAMILY OF CODES

93528	=	93501	+	93514

## L. Most Extensive Procedure

When procedures are performed together that are basically the same or performed on the same site but are qualified by an increased level of complexity, the less extensive procedure is bundled into the more extensive procedure. In the following situations, the procedure viewed as the most complex would be billed:

- "Simple" and "complex" CPT-4 codes billed; the simple procedure is bundled into the complex procedure.
- 2) "Limited" and "complete" CPT-4 codes billed; the limited procedure is bundled into the complete procedure.
- 3) "Simple" and "complicated" CPT-4 codes billed; the simple procedure is bundled into the complicated procedure.
- 4) "Superficial" and "deep" CPT-4 codes billed; the superficial procedure is bundled into the deep procedure.
- 5) "Intermediate" and "comprehensive" CPT-4 codes billed; the intermediate procedure is bundled into the comprehensive procedure.
- 6) "Incomplete" and "complete" CPT-4 codes billed; the incomplete procedure is bundled into the complete procedure.
- 7) "External" and "internal" CPT-4 codes billed; the external procedure is bundled into the internal procedure.

## M. Mutually Exclusive

There are numerous procedure codes that are not to be billed together because they are mutually exclusive of each other. Mutually exclusive codes are those codes that cannot reasonably be done in the same session. An example of this would be the CPT-4

codes 13100 and 13101 for the complex repair of the trunk. If multiple wounds are repaired of the trunk in the same repair classification, the length of the repairs is totalled. The complex repair cannot be measured and billed in the range of 1.1 centimeters to 2.5 centimeters and also 2.6 centimeters to 7.5 centimeters. The total length of the repair would determine the proper code assignment between CPT-4 codes 13100 and 13101. Another example of a mutually exclusive situation is when the repair of the organ can be performed by two different methods. One repair method must be chosen to repair the organ and must be billed. A third example is the billing of an "initial" service and a "subsequent" service. It is contradictory for a service to be classified as an initial and a subsequent service at the same time.

CPT-4 codes which are mutually exclusive of one another based either on the CPT-4 definition or the medical impossibility/improbability that the procedures could be performed at the same session can be identified as code pairs. These codes are not necessarily linked to one another with one code narrative describing a more comprehensive procedure compared to the component code, but can be identified as code pairs which should not be billed together. In order to identify these code pairs, an independent table of mutually exclusive code pairs has been developed as part of the policy. This table follows the traditional table of comprehensive and component codes without the designation of "comprehensive" and "component."

# N. Sequential Procedure

An initial approach to a procedure may be followed at the same encounter by a second, usually more invasive approach. There may be separate CPT-4 codes describing each service. The second procedure is usually performed because the initial approach was unsuccessful in accomplishing the medically necessary service; these procedures are considered "sequential procedures". Only the CPT-4 code for one of the services, generally the more invasive service, should be billed. An example of this situation is a failed laparoscopic cholecystectomy, followed by an open cholecystectomy at the same session. Only the code for the successful procedure, in this case the open cholecystectomy, should be billed.

### O. With/Without

In the CPT-4 manual, there are various procedures that have been separated into two codes with the definitional difference being "with" versus "without" (e.g. with and without contrast). Both procedure codes cannot be billed. When done together the "without" procedure is bundled into the "with" procedure. An example would be a closed treatment of a fracture with manipulation and without manipulation. The CPT-4 code without manipulation is bundled into the code with manipulation. Another example is a procedure described as under or requiring "anesthesia" and "without anesthesia." The "without anesthesia" procedure code is bundled into the "under" or "requiring anesthesia" procedure code.

# P. Laboratory Panels

When components of a specific organ or disease oriented laboratory panel (e.g., CPT-4 codes 80061, 80059) or automated multichannel tests (e.g., 80002-80019) are billed separately, they must be bundled into the comprehensive panel code that includes the multiple component tests. The individual tests that make up a panel are not to be separately billed.

Example: CPT-4 code 80090 (TORCH antibody panel) includes the following tests:

CPT-4 code 86644: Antibody - cytomegalovirus CPT-4 code 86694: Antibody - herpes simplex CPT-4 code 86762: Antibody - rubella CPT-4 code 86777: Antibody - toxoplasma

When all 4 tests are ordered and medically necessary, the panel test must be billed in place of the individual tests.

# Q. Not Otherwise Classified (NOC) Codes

The codes listed after each section and/or subsection which end in "99" (or a single "9" in a few cases) are used to report a service that is not described in any code listed elsewhere in the CPT-4 manual. Because of advances in technology or physician expertise with new procedures, a code may not be assigned to a procedure when the procedure is first introduced as accepted treatment. The NOC codes are then necessary to code the service. Every effort should be made to find the appropriate code to describe the service and frequent use of the NOC codes is not appropriate. Rebundling of these codes would occur after the documentation has been reviewed and the code has been changed to a specific code. The NOC codes have not been included in the Rebundling Policy or Edits because of the multiple procedures than can be assigned to these codes.

#### R. Units of Service

1. Introduction. CPT-4 code narrative descriptions either describe or imply an appropriate number of units of service which apply to the service or procedure described. Most surgical procedures, performed by the same physicican at the same session, are assumed to be performed only once; therefore, the typical units of service implied are to be one unit of service. In other situations, the procedure described is performed repetitively because of the nature of the condition. As an example, many dermatological lesions present not as a single lesion but as multiple lesions. Accordingly, the CPT-4 narrative describing the removal of these lesions defines the situation where a certain number of lesions are removed. In other cases, specific language in the narrative determines the unit of service. As an example, typically, the term "each" in the narrative suggests that, should multiple procedures be performed at the same session, multiple units of service may be required to adequately describe the service performed. Other language, such as the term "single" is often followed by a separate CPT-code (usually indented), using the term "multiple". When a combination of codes exists with this language, the appropriate

CPT-4 code to bill is determined by whether a single service is performed or if multiple, essentially identical services are performed at the same session. In the latter case, because the description of the service is that the procedure was performed multiple times, only one unit of service would be reported. In addition, CPT-4 or HCFA modifiers are available to further clarify the appropriate units of service. When CPT-4 modifiers are available, appropriate use of these modifiers is often included parenthetically following the code. This is particularly true in the case of procedures which may be performed unilaterally or bilaterally.

Because of variation among sections of CPT-4, refinements in CPT-4 code narratives, variation in the nature of services provided by different specialties, and coverage policies of HCFA, it can be unclear as to the appropriate designation of units of service that one indicates when billing Medicare using CPT-4 coding. Accordingly, this section of the National Rebundling Policy has been included as a guide to these determinations. This section does not indicate the number of services that should be billed with any given CPT-4 code. The units of service table clarifies the number of units of service that the CPT-4 narrative describes for the service taking into consideration the expanded availability of modifiers by HCFA, the Global Surgery Policy for Medicare and other factors.

The units of service table also takes into account not only the use of CPT-4 modifiers (e.g., bilateral services are indicated by the modifier "-50") but the use of both HCFA defined modifiers (e.g., "RT", "LT") and the proposed "DS" modifier indicating that a procedure was performed as a different service, at a different site, or represents a different lesion, etc., (see Chapter 1, Section E for description of the proposed "DS" modifier). HCFA modifiers describing individual digits are defined and, when appropriate, would apply to procedures on digits as described above. In general, when a modifier should typically be applied for multiple services, the units of service table has been constructed to reflect this case.

# Common CPT-4 terminology.

Many terms in CPT-4 are used in descriptors to aid in determination of the proper way to code the units of service.

While, in general, the following definitions are appropriate, there are isolated codes which, because of a unique circumstance specific to the service described, these definitions may not apply.

"Each": This term generally implies that the service can be performed repeatedly in one session in which case the descriptor implies one unit of service if the procedure is performed once, however, if medically necessary to repeat the procedure, one unit of service should be reported for each time the procedure is performed.

"Each additional \_\_\_\_\_": This terminology is commonly used for add on codes which are reported in addition to a primary code. Usually the primary code should be reported only once. The add on code usually specifies a number of services (e.g. "each additional ten lesions"). One unit of service would be reported when the number of repetitions is reached. In the case of CPT-4 code 11201, one unit of service is reported every time ten lesions are removed after the first fifteen are removed (which is reported with the primary code 11200 with one unit of service).

"Multiple": When the descriptor specifies multiple services, only one unit of service should be reported irrespective of the number of times the service is repeated. For example, CPT-4 code 78017 (Thyroid carcinoma metastases imaging; multiple areas) would be reported once, irrespective of the number of areas imaged.

"Minimum of \_\_\_\_": This term is commonly used in the narrative of radiology codes to describe the number of views necessary to report the code. When this term is used, at least the number of specified services, usually views, must have been completed to report the code. If the descriptor states "minimum of two views", the code should be reported once if two or more views are obtained. If four views are obtained, and another code describing four views is not available, it is inappropriate to report the code with two units of service.

"One or more\_\_\_\_\_": This terminology is similar to "multiple" described above; it is often used for codes describing procedures that are performed in a series of different sessions. The code should be reported once irrespective of the number of times the service is repeated.

- "And/or": This terminology generally connects two related services included in the comprehensive procedure. The code describing the service(s) should be reported as one unit of service if either one of the related procedures are performed or both are performed at the session.
- 3. Specific Modifiers. Two types of modifiers have been taken into account: CPT modifiers and HCFA modifiers.
- a. CPT modifiers. CPT-4 defined modifiers which have been taken into consideration include (but are not limited to):
- "-50" (Bilateral procedure): The appropriate use of this modifier is usually identified parenthetically following the CPT-4 codes to which it may apply.
- "-58" (Staged procedure): Since typically this modifier would not be used to describe procedures performed on the same day by the same physician the units of service have been defined accordingly.
- b. HCFA modifiers. Nationally recognized HCFA modifiers that may increase the level of specificity describing a service include (but are not limited to):
- "RT, LT" (Right, Left): When a service described by a CPT-4 narrative could be performed bilaterally, the use of these modifiers have been considered in defining the units of service for a CPT-4 narrative. For example, in an individual with bilateral stasis ulcers of the lower extremities, the use of an Unna boot may be medically indicated. The service, described by CPT-4 code 29580, has a unit of service designation of 1. The service for reporting application of an Unna boot to the right and left lower extremity should be billed as 29580-RT (one unit of service) and 29580-LT (one unit of service) rather than 29580 (2 units of service).
- "FA, F1-F(, TA, T1-T9" (Digit specification): These modifiers indicate the first through the fifth digit of the right or left hand or foot. While the CPT-4 narrative may indicate that "each" digit should be reported as an additional service, the use of the digit modifier indicates the digit requiring the procedure; accordingly, one (or two, in cases where the narrative is not specific regarding the upper or lower extremity) unit(s) of service is listed. While the digit specification obviously applies to

services involving the fingers and toes, there are an equal number of metacarpal and metatarsal bones. The use of the digit specification has been expanded to allow usage of the digit modifiers for procedures involving the metacarpal/metatarsal bones as well.

For example, employing simple CPT terminology, in the CPT-4 narrative for 11730-11732 "Avulsion of nail plate, partial or complete, simple; single" (11730), "second nail plate" (11731), "each additional nail plate" (11732), the units of service table would imply one unit for 11730, one unit for 11731 and 18 for 11732. This indicates that 11730 and 11731 describe a procedure performed on one nail plate and therefore one unit of service would appropriate. On the other hand, while it would rarely, if ever, be medically necessary to perform the procedure on all digits (20), it is anatomically possible and, therefore, the maximum units of service for 11732 could be as high as 18 because 11731 and 11732 are "add-on" codes for 11730. However, because of the availability of the right and left modifiers and the digit modifiers, the maximum specificity of the code 11732 would allow identification of whether the service was provided on the right or left extremity and on which digit (1-5). Because this level of specificity is available through the use of modifiers, the only determination that is not communicated is whether the service was provided on the fingers or toes; accordingly, the maximum number of services for 11732 would be one. A theoretical coding scenario for the circumstance where an individual required an avulsion of the first and second nail plate on the right hand, the fourth nail plate on the left hand, and the first three nail plates on the right foot would be as follows: (all one unit of service) 11730-RT-F5 (right thumb), 11731-RT-F6 (right index finger), 11732-RT-T5 (right first toe), 11732-RT-T6-51 (right second toe), 11732-RT-T7-51 (right third toe), 11732-LT-F4-51 (left ring finger). Multiple surgical modifiers are not indicated because of the "add on" nature of the latter codes until the code 11732 is being billed multiple times. While this is not a typically medically necessary scenario, it is used to describe the level of specificity that is employed in determining the units of service described in the table.

"DS" modifier (proposed): The "DS" modifier is used to indicate that a different site, different service, different lesion, etc. is involved and, therefore, separately identifiable services have been

performed. The units of service table has been constructed in such a fashion that, when multiple identical or similar services may typically be performed at a single session, it is assumed that the "DS" modifier will be submitted with the claim.

4. Claim adjudication. The Units of Service table is not intended to be used for determination of medical necessity but for the determination of correct coding. Accordingly, this table is not to be used for medical review for medical necessity, only as a guideline for correct and consistent coding according to CPT-4 convention and HCFA coding guidelines. In many cases, the number of units indicated will be identified as "the number of units of service Will vary according to the number of services performed". This designation has been assigned to a majority of the anesthesia codes because anesthesia coding is determined by time units and for all "unlisted" procedures because, by the nature of the code, a units of service designation cannot be identified. This designation has also been shown for services where there is a high frequency of anatomic variation (e.g., tendon repairs, etc.). The units of service for Level II HCPCS codes have not been included because of the vast range of possibilities.
