

***September 23 – 29, 2007 is National Adult Immunization Awareness Week.*** This annual health observance is a great opportunity to promote the importance of adult immunizations. The Centers for Medicare & Medicaid Services (CMS) reminds health care professionals that Medicare provides coverage for flu, pneumococcal, and hepatitis B vaccines and their administration. All adults 65 and older should get flu and pneumococcal shots. People with Medicare who are under 65 but have chronic illness, including heart disease, lung disease, diabetes or end-stage renal disease should get a flu shot. People at medium to high risk for hepatitis B should get hepatitis B shots. CMS needs your help to ensure that people with Medicare take full advantage of these vital preventive benefits. You can help by talking with your Medicare patients about their risk for these vaccine-preventable diseases covered by Medicare and the steps they can take to help reduce their risk of contracting these diseases, including getting vaccinated.

For more information about Medicare's coverage of adult immunizations and a list of related educational resources, please visit CMS' Medicare Learning Network Preventive Services Educational Products web page ([http://www.cms.hhs.gov/MLNProducts/35\\_PreventiveServices.asp#TopOfPage](http://www.cms.hhs.gov/MLNProducts/35_PreventiveServices.asp#TopOfPage)) on the CMS website.
