

Part C IPM: Process & Results Cheat Sheet

A high-level overview of the Part C IPM team's processes, from sample design through reporting the error rate. For additional resources and materials, please visit the [CMS MAO IPM Resources site](#).

Any further questions can be directed to PartC_IPM@cms.hhs.gov

Payment Error Reporting Benefits to the MAOs

Understanding program-wide implications and benefits including insight into potential CMS policy changes and bottom-line impact for MAOs to improve their internal processes.

Tracking historical payments and payment errors as benchmarks for future risk adjustment and/or contract level sampling, and payment error.

Providing additional data for external reporting that MAOs regularly reference for risk adjustment (e.g., IFRs and FFRs) and that beneficiaries can use as resources (e.g., the yearly AFR).

Best practices and reminders for physicians and hospitals to submit accurate medical records with relevant diagnosis information, promote quality of care that matches patient needs.

1 Sample Design Finalization

CMS initiates the sampling process after confirming Sampling Frames, Stratification, Population, and Enrollee Eligibility Criteria. Stratification is based on enrollee risk scores (i.e., low, medium, and high), with a fourth ESRD stratum starting in CY22. Eligibility consists of continuously enrolled full-risk beneficiaries with risk eligible claims.

2 Sample Draw and Evaluation

The Part C IPM sample is drawn according to the sample design and population/enrollee selection specifications. After the sample has been confirmed to be representative, the sample is finalized. Since 2017, some statistics per sample are:

930
Sampled Enrollees
(990 in CY22)

200-250
Range of contracts in the sample

0-20
CMS-HCCs per Enrollee (mean = 4.5)

3 MAO Notification and EDP

After finalizing the sample, MAO Medicare Compliance Officers and Chief Executive Officers from selected contracts receive email notifications with instructions for accessing HPMS. Once notified, Enrollee Data Packages are available and MAOs identify the medical records needed to validate sampled CMS-HCCs submitted during the data collection year. Each MAO receives an Enrollee Data Package containing the following files:

Enrollee Data List: A report of enrollees sampled for whom MR substantiation must be submitted (includes a dictionary of report variables).

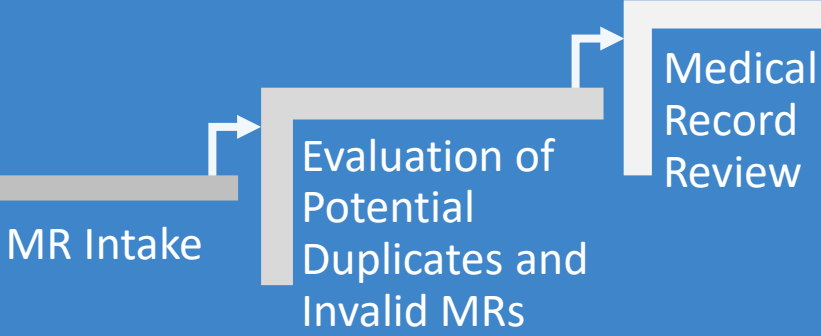

MR Attestation: A form to verify provider credentials on MR submissions, if needed.

Hospital & Physician Letters: Notifications to providers to comply with MR Request(s)

4 Sample Go-Live (Mid-January)

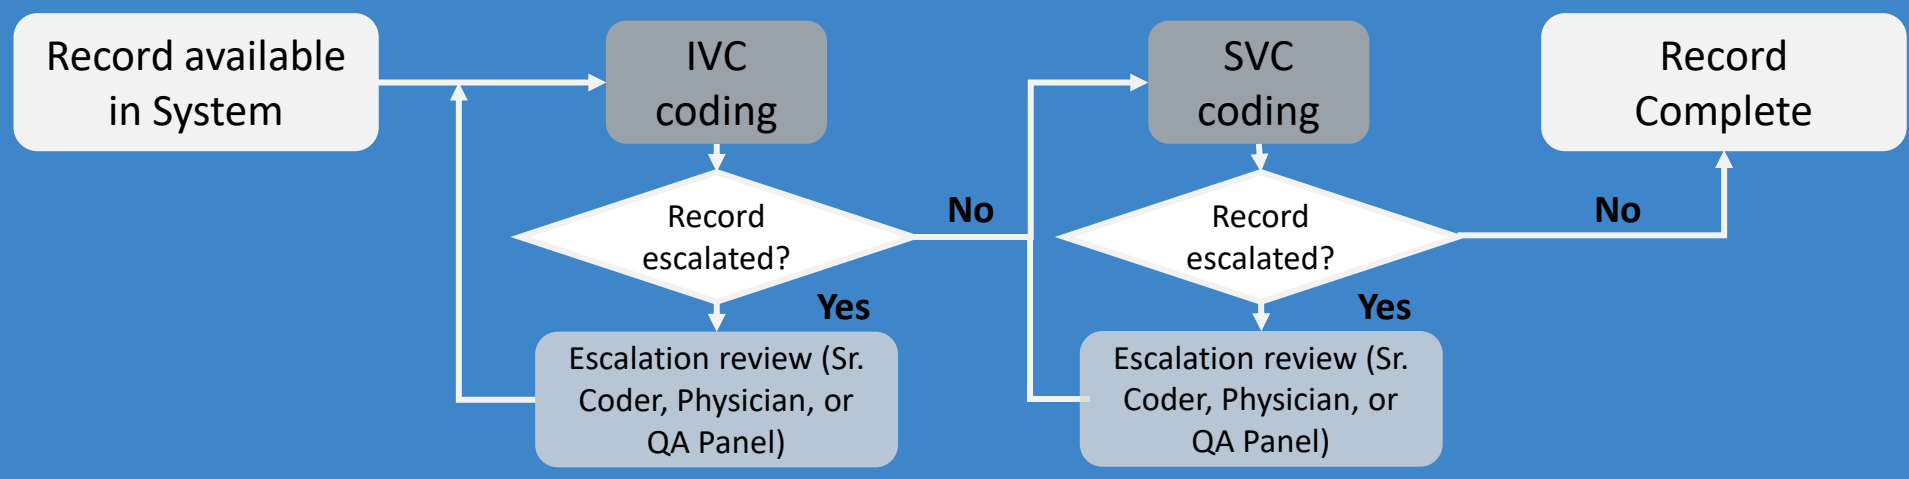

5 Data Preparation: Serves as inputs to Part C payment error analysis.

Part 1 – Medical Record Review Process

Part 2 - Analytical Data Preparation

- Submission, intake, and MR results data are extracted from HPMS
- Valid MRs are processed, and final CMS-HCC dispositions are determined by comparing pre- and post- MRR results
- Original and corrected risk scores are compared to determine a risk score error, which is translated into payment errors for the sample
- Analytical data sets for generating the PEC and various reports/analyses are created from the processed MR data

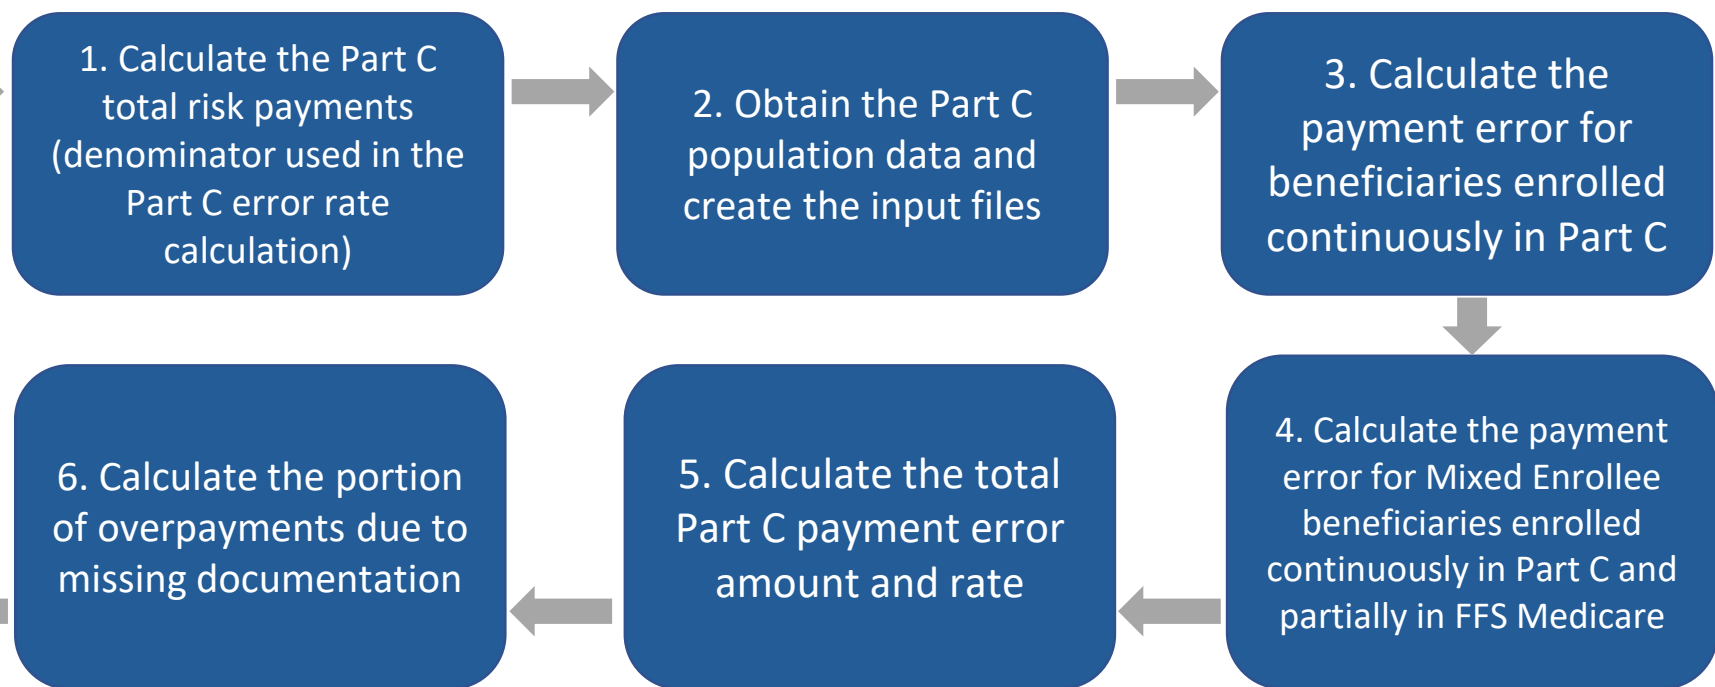

6

Payment Error Calculation (PEC)

The Payment Error Calculation process can be seen in the following graphic. Payment error information feeds into external reports.

PEC Start

PEC End

7

Reporting

MAO specific reporting is included in the Part C IPM process; three reports go directly to the MAOs, and three are external for MAOs to reference.

External Reporting

HHS [Agency Financial Report](#)

OMB [Payment Accuracy Reporting](#)

Part C IPM [Website Content](#)

Interim Findings Reports

Provides a snapshot of submitted MRs and interim results, allowing for proactive correction of discrepant CMS-HCCs and other issues. IFR #1 and #2 are published in HPMS in **March** and **April** during each Sample cycle, respectively.

HCC Outcomes Detail Report

Delivers daily updates to the plan user on sample submission progress, CMS-HCC level outcomes, and MA Contract Suggested Action.

Final Findings Report

Provides MA Contracts with final CMS-HCC dispositions and a summary of the contract's audit outcomes compared to the entire sample. MAOs should use this report to review the final discrepancies in detail.

Reports to the MAOs

Glossary

AFR: Agency Financial Report

CMS: Centers for Medicare & Medicaid

CMS-HCC: CMS Hierarchical Condition Category

CEO: Chief Executive Officer

ESRD: End Stage Renal Disease

EDP: Enrollee Data Package

FFR: Final Findings Report

FFS: Fee-for-Service

HPMS: Health Plan Management System

HHS: Department of Health and Human Services

HCC: Hierarchical Condition Category

IPM: Improper Payment Measure

IFR: Interim Findings Report

IVC: Initial Validation Contractor

MA: Medicare Advantage

MAO: Medicare Advantage Organization

MCO: Medicare Compliance Officer

MR: Medical Record

MRR: Medical Record Review

OMB: Office of Management and Budget

PEC: Payment Error Calculation

QA: Quality Assurance

SVC: Secondary Validation Contractor
