

QASP Medical Review

What is measured?

The various Medical Review QASP standards measure the quality of the data analysis plan; the implementation and effectiveness of MR edits; medical review of claims and documentation; and medical review activities and interventions.

Performance Data

Fiscal Year	AVG Performance	AVG Determination	Low Determination	Median Determination	High Determination
2023	99%	97%	75%	100%	100%
2024	100%	100%	100%	100%	100%
2025	100%	100%	100%	100%	100%

Trends and Observations

From Fiscal Year 2023 to 2025, there has been an overall positive trend in average performance and average determination scores. In both 2024 and 2025, all the MACs met the Medical Review standards and achieved 100% compliance. The MACs have consistently scored high on Medical Review metrics compared to other business functions measured by QASP. The Low Determination scores rise from 75% in 2023 to a sustained 100% in 2024 and 2025 shows Medical Review has closed the gap between its top- and bottom-performing MACs, placing it alongside Financial Management among the program's most consistent functions. For a detailed explanation of performance versus determination scores, please refer to the main QASP page.
