

Socials: Four Pillars of Transformation

Facebook Post

CMS is Transforming Kidney Care in America

The End Stage Renal Disease (ESRD) Network Program is revolutionizing how we deliver kidney care through four key priorities:

- **Empower Patient & Family Choice** - Putting control back in patients' hands with comprehensive information about treatment options and supporting shared decision-making
- **Improve Care Coordination** - Breaking down silos between dialysis facilities, transplant centers, and healthcare providers for seamless, integrated care
- **Promote Whole Health** - Addressing physical, mental, and social health needs —not just treating kidney disease
- **Enhance Data Interoperability** - Ensuring seamless data exchange to reduce duplicate testing and support better decision-making

Together, we're working toward optimal kidney health for all patients across America!

The End Stage Renal Disease (ESRD) Network Program has established a comprehensive strategy built on four transformative priorities that are reshaping kidney care across the healthcare continuum:

- 1. Empower Patient and Family Choice** Providing comprehensive treatment information, supporting shared decision-making, and promoting home dialysis and transplantation as preferred modalities.
- 2. Improve Care Coordination** Implementing the A3C Model (Assess, Complement, Coordinate, Create) to break down silos and facilitate smooth transitions across the care continuum.
- 3. Promote Whole Health** Moving beyond treating kidney disease alone to address the complete well-being of patients —physical, mental, and social health needs.
- 4. Enhance Data Interoperability** Breaking down information silos to enable seamless data exchange, reduce administrative burden, and support evidence-based decision-making.

Through strategic partnerships with high-performing facilities and targeted quality improvement efforts, we're ensuring accountability and continuous progress toward optimal kidney health outcomes.

The End Stage Renal Disease (ESRD) Network Program is revolutionizing patient care:

Patient Choice - Empowering informed decisions

Care Coordination - Breaking down healthcare silos

Whole Health - Treating the complete person

Data Interoperability - Seamless information sharing

Together, we're building a better future for kidney patients across America!
