

# ICD-10 Procedure Coding System (ICD-10-PCS) 2026 Tables and Index

## Introduction

The **ICD-10-PCS Tables** contains all valid codes in table format. The tables are arranged in alphanumeric order, and organized into separate tables according to the first three characters of the seven-character code.

The **ICD-10-PCS Index** contains entries based on the terms (known as values) used in the ICD-10-PCS Tables, as well as entries based on common procedure terms. Index entries either link directly to a PCS table or refer the user to another index entry.

The **ICD-10-PCS Definitions** contain the official definitions of ICD-10-PCS values in characters 3 through 7 of the seven-character code, and may also provide additional explanation or examples. The definitions are arranged in section order, and designate the section and the character within the section being defined.

The ICD-10-PCS **Body Part Key** contains entries that refer a common anatomical term to its corresponding ICD-10-PCS body part value(s).

The ICD-10-PCS **Device Key** contains entries that refer a common device term or manufacturer's device name to its corresponding ICD-10-PCS device value.

The ICD-10-PCS **Substance Key** contains entries that refer a common substance name or manufacturer's substance name to its corresponding ICD-10-PCS substance value.

The ICD-10-PCS **Device Aggregation Table** contains entries that correlate a specific ICD-10-PCS device value with a general device value to be used in tables containing only general device values.
