SUBJECT: Encounter Data Front End System Software Release Updates: 2022 Quarter 3 Release - Correction

The Centers for Medicare and Medicaid Services (CMS) continues to implement software improvements to the systems related to accepting and processing encounter data to support the Medicare Advantage (MA) program. The changes described in this memo impact edits within the Encounter Data Front End System (EDFES) and are effective for encounter submissions beginning July 02, 2022.

The EDFES uses a translator as part of its process of receiving encounter data files. The translator performs syntactical editing in accordance with the Combined Common Edit Module (CCEM) and prepares the data file for further downstream processing. While performing our routine processing, CMS recently discovered several system anomalies and will be activating the following edits in the translator to eliminate these situations effective July 02, 2022. These edits will be returned on the standard 999 or 277CA reports.

Date Qualifier Table A:

Edits impacting all encounter records (Payer IDs 80881, 80882, and 80887) will be activated to prevent invalid characters being submitted in the Date Qualifier field (DMG01) and to prevent the submission of more than one Principal Diagnosis code per encounter record (HI01-1) as displayed in Table A.
