- 1. Invalid diagnosis or procedure code** The Medicare Code Editor checks each diagnosis including the admitting diagnosis and each procedure against a table of valid ICD-9-CM codes. If an entered code does not agree with any code on the internal list, it is assumed to be invalid or that the 4th or 5th digit of the code is invalid or missing.
- 2. E-code as principal diagnosis** For a list of all valid ICD-9-CM codes, see volumes 2 (diseases) and 3 (procedures) of the *International Classification of Diseases, 9th Revision, Fourth Edition, Clinical Modification (ICD-9-CM)*.
- E-codes are ICD-9-CM codes beginning with the letter E. They describe the circumstance causing an injury, not the nature of the injury, and therefore should not be used as a principal diagnosis.
- For a list of all E-codes, see volume 2 (diseases) of the *International Classification of Diseases, 9th Revision, Fourth Edition, Clinical Modification (ICD-9-CM)*.
- 3. Duplicate of PDX** Whenever a secondary diagnosis is coded the same as the principal diagnosis, the secondary diagnosis is identified as a duplicate of the principal diagnosis.
- 4. Age conflict** The Medicare Code Editor detects inconsistencies between a patient's age and any diagnosis on the patient's record. For example, a five-year-old patient with benign prostatic hypertrophy or a 78-year-old patient coded with a delivery.
- In the above cases, the diagnosis is clinically and virtually impossible in a patient of the stated age. Therefore, either the diagnosis or the age is presumed to be incorrect. There are four age categories for diagnoses in the program:
- ◆ **Newborn.** Age of 0 years; a subset of diagnoses intended only for newborns and neonates (e.g., fetal distress, perinatal jaundice).
 - ◆ **Pediatric.** Age range is 0–17 years inclusive (e.g., Reye's syndrome, routine child health exam).
 - ◆ **Maternity.** Age range is 12–55 years inclusive (e.g., diabetes in pregnancy, antepartum pulmonary complication).
 - ◆ **Adult.** Age range is 15–124 years inclusive (e.g., senile delirium, mature cataract).
- The following pages contain lists of ICD-9-CM diagnosis codes with corresponding English descriptions for each of the age categories described above.

5. Sex conflict

Medicare Code Editor detects inconsistencies between a patient's sex and any diagnosis or procedure on the patient's record. For example, a male patient with cervical cancer (diagnosis) or a female patient with a prostatectomy (procedure).

In both instances, the indicated diagnosis or the procedure conflicts with the stated sex of the patient. Therefore, either the patient's diagnosis, procedure or sex is presumed to be incorrect.

The following pages contain lists of male and female related ICD-9-CM diagnosis and procedure codes with corresponding English descriptions.

7. Non-specific principal diagnosis

Effective 10/01/07, the non-specific principal diagnosis edit was discontinued and will appear for claims processed using MCE version 2.0-23.0 only.

8. Questionable admission

Some diagnoses are not usually sufficient justification for admission to an acute care hospital. For example, if a patient is given code 4011 for benign hypertension, then the patient would have a questionable admission, since benign hypertension is not normally sufficient justification for admission to a hospital.

The following list contains diagnosis codes with corresponding English descriptions identified as questionable admission when used as a principal diagnosis.

9. Unacceptable principal diagnosis

There are selected codes that describe a circumstance which influences an individual's health status but not a current illness or injury, or codes that are not specific manifestations but may be due to an underlying cause. These codes are considered unacceptable as a principal diagnosis.

There are a few usually unacceptable principal diagnosis codes that are considered "acceptable" when a secondary diagnosis is also coded on the record. If no secondary diagnosis is present for this subset of codes, the message REQUIRES SECONDARY DX will appear.

The following pages contain a list of codes with corresponding English descriptions identified as unacceptable when entered as principal diagnosis.

- **Note:** *Codes that require a secondary diagnosis are indicated with an asterisk (*).*

10. Non-specific O.R. procedure

Effective 10/01/07, the non-specific O.R. procedure edit was discontinued and will appear for claims processed using MCE version 2.0-23.0 only.

11. Non-covered procedure

There are some procedures for which Medicare does not provide reimbursement. There are also procedures that would normally not be reimbursed by Medicare but due to the presence of certain diagnoses are reimbursed.

The following page contains lists of non-covered procedure codes with corresponding English descriptions, and explains the circumstances in which the edit is applied.

Non-covered procedures

1. The following criteria are retroactive effective November 6, 2006.

The procedure shown below is identified as a non-covered procedure *except* when combined with non-operating room procedure code 0065 (Perc ins intracran stent).

Procedure

2. The following criteria are retroactive effective April 26, 2006.

ICD-9-CM procedure codes 5280 (Pancreat transplant NOS) and 5282 (Pancreatic homotransplan) alone [without 5569 (Kidney transplant NEC)] are considered “Non-covered procedures” *except* for the following condition:

When either 5280 or 5282 is combined with at least one principal or secondary diagnosis code from the following diagnoses list:

12. Open biopsy check

Biopsies can be performed as open biopsies, percutaneously, or endoscopically. The DRG Definitions assign a patient to different DRGs depending on whether or not the biopsy was open. In general, for most organ systems, open biopsies are performed infrequently. There are explicit ICD-9-CM codes for open and non-open biopsies. Since the distinction made between the different biopsy codes is not applied uniformly, the Medicare Code Editor identifies *all* biopsies that are coded as open biopsies.

The following list contains codes, with corresponding English descriptions, that are flagged for an open biopsy check.

Open biopsy procedures

0112	Open cereb meninges bx

13. Bilateral procedure

Certain codes do not accurately reflect procedures performed in one admission on two or more *different* bilateral joints of the lower extremities. A combination of these codes shows a bilateral procedure when they could be procedures performed on a single joint (i.e., duplicate procedures). For example, if 8151 (Total hip replacement) and 8152 (Partial hip replacement) are both coded on the claim, the edit “bilateral procedure” will appear.

This edit instructs the fiscal intermediary to ensure that these procedures were performed on two separate joints. However, if 8151 (Total hip replacement) is coded twice, the edit would not appear because this signifies a true bilateral procedure.

The following list contains the joint replacement procedure codes with corresponding English descriptions identified as “bilateral procedure” whenever two or more *different* joint procedures are coded, and the principal diagnosis causes assignment to MDC 8.

Bilateral procedure codes

0070	Rev hip repl-acetab/fem
0080	Rev knee replacemt-total
0085	Resrf hip,total-acet/fem
0086	Resrf hip,part-fem head
