-3009	Format	Fatal	Values of Code and Checklist Items: Only the coded values listed in the "Item Values" table of the Detailed Data Specifications Report may be submitted for this item.
-3028	Consistency	Fatal	The Item Subset Code (ISC) is a two-character code that indicates the type of record that is being submitted. The set of active items is controlled by the ISC. The submission system will recalculate the ISC and compare the recalculated value with the value that is submitted in ITM_SBST_CD. If the recalculated value does not match the value submitted in ITM_SBST_CD, a fatal error will result. The ISC is defined as follows: If A0050 = [1,2] and A0250 = [01] then ITM_SBST_CD = [HA] If A0050 = [1,2] and A0250 = [09] then ITM_SBST_CD = [HD] If A0050 = [3] and A0250 = [01,09] then ITM_SBST_CD = [XX] For a more complete explanation of the meaning and use of the ISC codes, please refer to the documentation that accompanies these data specifications.
-3034	Consistency	Warning	RECORD SUBMISSION TIMING RULES The following rules specify the maximum number of days which should elapse between each date listed and the submission date. Violation of these rules will result in warnings. These rules apply only to new records (where A0050=[1]). They do not apply to modification or inactivation records (where A0050=[2,3]). a) If A0250=[01] (admission record), then submission date minus A0220 (admission date) should be less than or equal to 30 days. b) If A0250=[09] (discharge record), then submission date minus A0270 (discharge date) should be less than or equal to 30 days.
-3052	Consistency	Fatal	If A0050=[1], then CRCTN_NUM must equal [00].
