-3009	Format	Fatal	Values of Code and Checklist Items: Only the coded values listed in the "Item Values" table of the Detailed Data Specifications Report may be submitted for this item.
-3028	Consistency	Fatal	The Item Subset Code (ISC) is a two-character code that indicates the type of record that is being submitted. The set of active items is controlled by the ISC. The submission system will recalculate the ISC and compare the recalculated value with the value that is submitted in ITM_SBST_CD. If the recalculated value does not match the value submitted in ITM_SBST_CD, a fatal error will result. The ISC is defined as follows: If A0050 = [1,2] and A0250 = [01] then ITM_SBST_CD = [HA] If A0050 = [1,2] and A0250 = [09] then ITM_SBST_CD = [HD] If A0050 = [3] and A0250 = [01,09] then ITM_SBST_CD = [XX] For a more complete explanation of the meaning and use of the ISC codes, please refer to the documentation that accompanies these data specifications.

The submitted value must be greater than or equal to the minimum value listed in the table and less than or equal to the maximum value listed in the table, or it must match one of the remaining special values (if any) that are listed in the table. In other words, the correction number in CRCTN_NUM on the first correction/inactivation must be "01", and the value on each subsequent correction/inactivation must be incremented by 1. If the value submitted in CRCTN_NUM is incorrect, a fatal error will result and the submitted record will be rejected.</p>
