SECTION 1

CROSS-SETTING MEASURES DEVELOPMENT WORK: AN INTRODUCTION

The Improving Medicare Post-Acute Care Transformation Act of 2014 (IMPACT Act), enacted Oct. 6, 2014, directs the Secretary of Health and Human Services to “specify quality measures on which Post-Acute Care (PAC) providers are required under the applicable reporting provisions to submit standardized patient assessment data” in several domains, including medication reconciliation and resource use measures, including Medicare spending per beneficiary, discharge to community and all-condition risk-adjusted potentially preventable readmission rates. The IMPACT Act requires the implementation of measures to address these measure domains in home health agencies (HHAs), skilled nursing facilities (SNFs), long-term care hospitals (LTCHs), and inpatient rehabilitation facilities (IRFs).

The IMPACT Act also requires, to the extent possible, the submission of such quality measure data through the use of a PAC assessment instrument and the modification of such instrument as necessary to enable such use; for IRFs, the IRF-Patient Assessment Instrument (IRF-PAI) will be used.

For more information on the IMPACT Act as it pertains to the selection and proposal of measures for the IRF QRP, please refer to the FY 2016 IRF PPS final rule at <https://www.gpo.gov/fdsys/pkg/FR-2015-08-04/pdf/2015-18950.pdf>. More information on the IMPACT Act is available at <https://www.govtrack.us/congress/bills/113/hr4994>.

In this document, we present specifications for the following three (3) measures proposed for adoption for the IRF QRP through the FY 2017 IRF PPS Final Rule:

1. Discharge to Community- Post Acute Care (PAC) Inpatient Rehabilitation Facility (IRF) Quality Reporting Program (QRP);
2. Potentially Preventable 30-Days Post-Discharge Readmission Measure for Inpatient Rehabilitation Facility (IRF) Quality Reporting Program (QRP);
3. Drug Regimen Review Conducted with Follow-Up for Identified Issues- Post Acute Care (PAC) Inpatient Rehabilitation Facility (IRF) Quality Reporting Program (QRP).

SECTION 2
MEASURES AFFECTING THE FY 2018 PAYMENT DETERMINATION AND
SUBSEQUENT YEARS

2.1 Discharge to Community-Post Acute Care (PAC) Inpatient Rehabilitation Facility (IRF) Quality Reporting Program (QRP)

2.1.1 Measure Description

Sections 1899B(d)(1)(B) and 1899B(a)(2)(E)(ii) of the Act require the Secretary to specify a measure to address the resource use and other measures domain of discharge to community by SNFs, LTCHs, and IRFs by October 1, 2016, and HHAs by January 1, 2017. We are proposing to adopt the measure, Discharge to Community-Post Acute Care (PAC) Inpatient Rehabilitation Facility (IRF) Quality Reporting Program (QRP) for the IRF QRP as a Medicare FFS claims-based measure to meet this requirement.

This proposed measure assesses successful discharge to the community from a PAC setting, with successful discharge to the community including no unplanned rehospitalizations and no death in the 31 days following discharge. Specifically, this proposed measure reports an IRF's risk-standardized rate of Medicare FFS patients who are discharged to the community following an IRF stay, and do not have an unplanned readmission to an acute care hospital or LTCH in the 31 days following discharge to community, and who remain alive during the 31 days following discharge to community. Community, for this measure, is defined as home/self-care, with or without home health services, based on Patient Discharge Status Codes 01, 06, 81, and 86 on the Medicare FFS claim.^{1,2}

We have developed three discharge to community measures for IRF, SNF, and LTCH settings, respectively. These measures are conceptualized uniformly across the PAC settings, in terms of the definition of the discharge to community outcome, the approach to risk adjustment, and the measure calculation. It is important to note, though, that each measure is specific to the particular PAC setting (i.e., IRF, SNF, or LTCH); we do not pool PAC patients/residents across settings in the measure development and calculation.

2.1.2 Purpose/Rationale for the Measure

Discharge to a community setting is an important health care outcome for many patients/residents for whom the overall goals of post-acute care include optimizing functional improvement, returning to a previous level of independence, and avoiding institutionalization. Returning to the community is also an important outcome for many patients/residents who are not expected to make functional improvement during their PAC stay, and for patients/residents who may be expected to decline functionally due to their medical condition. The discharge to community outcome offers a multi-dimensional view of preparation for community life,

¹ Further description of patient discharge status codes can be found, for example, at the following Web page: <https://med.noridianmedicare.com/web/jea/topics/claim-submission/patient-status-codes>.

² This definition is not intended to suggest that board and care homes, assisted living facilities, or other settings included in the definition of "community" for the purpose of this measure are the most integrated setting for any particular individual or group of individuals under the Americans with Disabilities Act (ADA) and Section 504.

including the cognitive, physical, and psychosocial elements involved in a discharge to the community.^{3,4}

In addition to being an important outcome from a patient/resident and family perspective, patients/residents discharged to community settings, on average, incur lower costs over the recovery episode, compared with those discharged to institutional settings.^{5,6} Given the high costs of care in institutional settings, encouraging PACs to prepare patients for discharge to community, when clinically appropriate, may have cost-saving implications for the Medicare program.⁷ Also, providers have found that successful discharge to community was a major driver of their ability to achieve savings, where capitated payments for post-acute care were in place.⁸ For patients/residents who require long-term care due to persistent disability, discharge to community could result in lower long-term care costs for Medicaid and for patients'/residents' out-of-pocket expenditures.⁹

Analyses conducted for the Assistant Secretary for Planning and Evaluation (ASPE) on PAC episodes, using a 5 percent sample of 2006 Medicare claims, revealed that relatively high average, unadjusted Medicare payments are associated with discharge to institutional settings from IRFs, SNFs, LTCHs or HHAs, as compared with payments associated with discharge to community settings.¹⁰ Average, unadjusted Medicare payments associated with discharge to community settings ranged from \$0 to \$4,017 for IRF discharges, \$0 to \$3,544 for SNF discharges, \$0 to \$4,706 for LTCH discharges, and \$0 to \$992 for HHA discharges. In contrast, payments associated with discharge to non-community settings were considerably higher, ranging from \$11,847 to \$25,364 for IRF discharges, \$9,305 to \$29,118 for SNF discharges, \$12,465 to \$18,205 for LTCH discharges, and \$7,981 to \$35,192 for HHA discharges.¹¹

Measuring and comparing facility-level discharge to community rates is expected to help differentiate among facilities with varying performance in this important domain, and to help avoid disparities in care across patient/resident groups. Variation in discharge to community

rates has been reported within and across post-acute settings; across a variety of facility-level characteristics, such as geographic location (for example, regional location, urban or rural location), ownership (for example, for-profit or nonprofit), and freestanding or hospital-based units; and across patient-level characteristics, such as race and gender.^{12,13,14,15,16,17} Discharge to community rates in the IRF setting have been reported to range from about 60 to 80 percent.^{18,19,20,21,22,23} Longer-term studies show that rates of discharge to community from IRFs have decreased over time as IRF length of stay has decreased.^{24,25} In the IRF Medicare FFS population, using CY 2013 national claims data, we found that approximately 69 percent of patients were discharged to the community. Greater variation in discharge to community rates is

seen in the SNF setting, with rates ranging from 31 to 65 percent.^{26,27,28,29} A multi-center study of 23 LTCHs demonstrated that 28.8 percent of 1,061 patients who were ventilator-dependent on admission were discharged to home.³⁰ A single-center study found that 31 percent of LTCH hemodialysis patients were discharged to home.³¹ One study noted that 64 percent of beneficiaries who were discharged from the home health episode did not use any other acute or post-acute services paid by Medicare in the 30 days after discharge.³² However, significant numbers of patients were admitted to hospitals (29 percent) and lesser numbers to skilled nursing facilities (7.6 percent), inpatient rehabilitation facilities (1.5 percent), home health (7.2 percent) or hospice (3.3 percent).³³

Discharge to community is an actionable health care outcome, as targeted interventions have been shown to successfully increase discharge to community rates in a variety of post-acute settings.^{34,35,36,37} Many of these interventions involve discharge planning or specific rehabilitation strategies, such as addressing discharge barriers and improving medical and

functional status.^{38,39,40,41} The effectiveness of these interventions suggests that improvement in discharge to community rates among post-acute care patients/residents is possible through modifying provider-led processes and interventions.

2.1.3 Denominator

The denominator for the discharge to community measure is the risk-adjusted expected number of discharges to community. This estimate includes risk adjustment for patient/resident characteristics with the facility effect removed. The “expected” number of discharges to community is the predicted number of risk-adjusted discharges to community if the same patients/residents were treated at the average facility appropriate to the measure.

The regression model used to calculate the denominator is developed using all non-excluded facility stays in the national data. The denominator is computed in the same way as the numerator, but the facility effect is set at the average. The descriptions of the discharge to community outcome, patient/resident stays included in the measure, and numerator calculation are provided below.

2.1.4 Numerator

The measure does not have a simple form for the numerator and denominator—that is, the risk adjustment method does not make the *observed* number of community discharges the numerator, and a *predicted* number the denominator. The measure numerator is the *risk-adjusted estimate* of the number of patients/residents who are discharged to the community, do not have an unplanned readmission to an acute care hospital or LTCH in the 31-day post-discharge observation window, and who remain alive during the post-discharge observation window. This estimate starts with the observed discharges to community, and is risk adjusted for patient/resident characteristics and a statistical estimate of the facility effect beyond case mix.

The numerator uses a model estimated on full national data specific to the post-acute setting; it is applied to the facility’s patient/resident stays included in the measure, and includes the estimated effect of that facility. The prediction equation is based on a logistic statistical model with a two-level hierarchical structure. The patient/resident stays in the model have an indicator of the facility they are discharged from; the effect of the facility is measured as a positive or negative shift in the intercept term of the equation. The facility effects are modeled as belonging to a normal (Gaussian) distribution centered at 0, and are estimated along with the effects of patient/resident characteristics in the model. Numerator details are provided below.

Numerator Details: Discharge to Community

Discharge to community is determined based on the “Patient Discharge Status Code” from the PAC claim. Discharge to community is defined as discharge to home/self-care with or without home health services.⁴² Table 1 below lists the Patient Discharge Status Codes used to define community.

Table 1
Patient Discharge Status Codes Used to Determine Discharge to Community

Discharge Status Codes Indicating Community Discharge	
01	Discharged to home/self-care (routine discharge)
06	Discharged/transferred to home under care of organized home health service organization
81	Discharged to home or self-care with a planned acute care hospital readmission
86	Discharged/transferred to home under care of organized home health service organization with a planned acute care hospital inpatient readmission

Numerator Details: Unplanned Readmissions in the 31-Day Post-Discharge Observation Window

A patient/resident who is discharged to the community is considered to have an unfavorable outcome if they have a subsequent unplanned readmission to an acute care hospital or LTCH in the post-discharge observation window, which includes the day of discharge and the 31 days following day of discharge. We identify unplanned readmissions based on the planned readmissions algorithm used in the following post-acute care readmission measures, endorsed by the National Quality Forum (NQF): (i) NQF #2510: Skilled Nursing Facility 30-Day All-Cause Readmission Measure (SNFRM); (ii) NQF #2502: All-Cause Unplanned Readmission Measure for 30 Days Post Discharge from Inpatient Rehabilitation Facilities; (iii) NQF #2512: All-Cause Unplanned Readmission Measure for 30 Days Post Discharge from Long Term Care Hospitals; and (iv) NQF #2380: Rehospitalization During the First 30 Days of Home Health.^{43,44,45,46} These readmission measures are based on the Hospital-Wide All-Cause Readmission Measure

⁴² Further description of patient discharge status codes can be found, for example, at the following Web page: <https://med.noridianmedicare.com/web/jea/topics/claim-submission/patient-status-codes>.

⁴³ NQF #2510: Skilled Nursing Facility 30-Day All-Cause Readmission Measure (SNFRM). <http://www.qualityforum.org/QPS/2510>

⁴⁴ NQF #2502: All-Cause Unplanned Readmission Measure for 30 Days Post Discharge from Inpatient Rehabilitation Facilities. <http://www.qualityforum.org/QPS/2502>

⁴⁵ NQF #2512: All-Cause Unplanned Readmission Measure for 30 Days Post Discharge from Long Term Care Hospitals. <http://www.qualityforum.org/QPS/2512>

⁴⁶ NQF #2380: Rehospitalization During the First 30 Days of Home Health <http://www.qualityforum.org/QPS/2380>

(HWR) (CMS/Yale) (NQF #1789),⁴⁷ with some additions made for post-acute settings. The planned readmission definition is based on the claim from the readmission having a code for a procedure that is frequently planned; however, if a principal diagnosis in a specified list of acute diagnoses is present, the readmission is reclassified as unplanned. Readmissions to psychiatric hospitals or units are classified as planned readmissions.

Please note that this measure has been developed with ICD-9 procedure and diagnosis codes. The measure will be revised using the ICD-9 to ICD-10 cross-walk.

Numerator Details: Death in the 31-Day Post-Discharge Observation Window

Patients/residents who are discharged to the community are also considered to have an unfavorable outcome if they die in the post-discharge window, which includes the day of discharge and the 31 days following day of discharge. Death in the post-discharge window is identified based on date of death from Medicare eligibility files.

2.1.5 Target Population and Measure Exclusions

The target population for the measure is the group of Medicare FFS patients/residents who are not excluded for the reasons listed below.

Measure Exclusions

Exclusions for the discharge to community measure are listed below, along with the rationale for each exclusion. The measure exclusion criteria are determined by processing Medicare claims and eligibility data to determine whether the individual exclusion criteria are met. All measure exclusion criteria are based on administrative data. Only PAC stays that are preceded by a short-term acute care stay in the 30 days prior to the PAC admission date are included in the measure. Stays ending in transfers to the same level of care are excluded.

1) Age under 18 years

Rationale:

- a. There is limited literature on discharge destination outcomes in this age group;
- b. Patients/residents in this age group represent a different cohort, likely living with their parents, and may be expected to have higher discharge to community rates compared with the rest of the Medicare population; and
- c. Patients/residents in this age group represent a small proportion of the post-acute Medicare FFS population.

⁴⁷ NQF #1789: Hospital-Wide All-Cause Readmission Measure (HWR) (CMS/Yale).
www.qualityforum.org/QPS/1789

- 2) *No short-term acute care stay within the 30 days preceding an IRF, SNF, or LTCH admission*

Rationale: Acute care claims from the 30 days prior to IRF, SNF, or LTCH admission provide the principal diagnosis and other important patient/resident data for risk adjustment. In IRF, SNF, and LTCH settings, patients/residents without a short-term acute care discharge within the 30 days prior to PAC admission will be excluded from the measure, because important risk adjustment data will be missing.

- 3) *Discharges to psychiatric hospital*

Rationale: Patients/residents discharged to psychiatric hospital are excluded from the measure because community living at the time of discharge may be potentially inappropriate or unsafe for them due to their mental health or psychiatric condition.

- 4) *Discharges against medical advice*

Rationale: Patients/residents who discharge themselves against medical advice are excluded because their care plan may not have been fully implemented, and the discharge destination may not reflect the facility's discharge recommendation. Additionally, patients/residents discharged against medical advice may potentially be at higher risk of post-discharge readmissions or death, depending on their medical condition, or due to potential non-adherence or non-compliance with care recommendations.

- 5) *Discharges to disaster alternative care sites or federal hospitals*

Rationale: Patients/residents discharged to disaster alternative care sites are excluded because these discharges are likely influenced by external emergency conditions, and may not represent discretionary discharges by the PAC provider. Discharges to federal hospitals are also excluded.

- 6) *Discharges to court/law enforcement*

Rationale: Patients/residents who are discharged to court or law enforcement are likely ineligible for discharge to the community due to legal restrictions.

- 7) *Patients/residents discharged to hospice*

Rationale:

- a. Patients/residents discharged to hospice care are terminally ill, and have very different goals of care compared with non-hospice patients/residents. For non-hospice patients/residents, the primary goal of post-acute care is to return to baseline, independent living in the community; death is an undesirable outcome in the non-hospice population. For patients/residents discharged to hospice, the goal is to provide them the opportunity to die comfortably, at home or in a facility.

- b. A large proportion of patients/residents discharged to hospice care die in the 31-day window following discharge from the post-acute setting.
 - c. The hospice agency, not the post-acute care setting, makes the final decision of discharge to hospice-home or hospice-facility.
- 8) *Patients/residents not continuously enrolled in Part A FFS Medicare for the 12 months prior to the post-acute admission date, and at least 31 days after post-acute discharge date*

Rationale: Patients/residents not continuously enrolled in Part A FFS Medicare for the 12 months prior to the PAC admission date are excluded because risk adjustment for certain comorbidities requires information on acute inpatient bills for one year prior to post-acute admission. Patients/residents not continuously enrolled in Part A FFS Medicare for at least 31 days after post-acute discharge are excluded because readmissions and death must be observable in the 31-day post-discharge period. Patients/residents without Part A coverage or those who are enrolled in Medicare Advantage plans will not have complete inpatient claims in the system.

- 9) *Patients/residents whose prior short-term acute care stay was for non-surgical treatment of cancer*

Rationale: Patients/residents whose prior short-term acute care stay was for non-surgical treatment of cancer are excluded because they have a different trajectory for recovery after discharge, with a high mortality rate.⁴⁸ Exclusion of these patients/residents is consistent with the hospital-wide and post-acute readmission measures.

- 10) *Post-acute stays that end in transfer to the same level of care*

Rationale: Post-acute stays that end in transfer to the same level of care are excluded from the measure because their post-acute episode has not ended. For a post-acute episode that involves transfer to the same level of care, only the final post-acute provider is included in the measure.

- 11) *Post-acute stays with claims data that are problematic (e.g., anomalous records for stays that overlap wholly or in part, or are otherwise erroneous or contradictory)*

Rationale: This measure requires accurate information from the post-acute stay and prior short-term acute care stay in the elements used for risk adjustment. No-pay post-acute stays involving exhaustion of Part A benefits are also excluded.

- 12) *Planned discharges to an acute or LTCH setting*

Rationale: For the IRF and SNF settings, planned discharges to an acute care hospital or LTCH will be excluded. For the LTCH setting, planned discharges to an

⁴⁸ NQF #1789: Hospital-Wide All-Cause Readmission Measure (HWR) (CMS/Yale). <http://www.qualityforum.org/QPS/1789>

acute care hospital will be excluded. (Note that, in the LTCH setting, transfer to another LTCH is excluded because it represents a transfer to the same level of care).

13) *Medicare Part A benefits exhausted*

Rationale: Patients/residents who have exhausted their Medicare Part A coverage during the PAC stay are excluded because the discharge destination decision may be related to exhaustion of benefits.

14) *Patients/residents who received care from a facility located outside of the United States, Puerto Rico or a U.S. territory*

Rationale: Patients/residents who received care from foreign facilities may not have complete inpatient claims in the system, and these facilities may not be subject to policy decisions related to this quality measure.

15) *Swing Bed Stays in Critical Access Hospitals (SNF setting only)*

Rationale: Critical access hospital (CAH) swing bed stays are excluded from the SNF setting measure. This is because CAH swing bed facilities are not required to submit quality data under the SNF QRP, and are exempt from the SNF Prospective Payment System (PPS). Note that non-CAH swing bed stays are included in the measure, because non-CAH swing bed facilities are required to submit quality data under the SNF QRP and are subject to the SNF PPS.

2.1.6 Data Sources

This measure is based on Medicare FFS administrative claims, and uses data in the Medicare eligibility files and inpatient claims. The eligibility files provide information such as date of birth, date of death, sex, reasons for Medicare eligibility, periods of Part A coverage, and periods in the Medicare FFS program. The data elements from the Medicare FFS claims are those basic to the operation of the Medicare payment systems and include data such as date of admission, date of discharge, diagnoses, procedures, indicators for use of dialysis services, and indicators of whether the Part A benefit was exhausted. The inpatient claims data files contain patient/resident-level PAC and other hospital records. No data beyond the bills submitted in the normal course of business are required from providers for the calculation of this measure.

IRF & LTCH Measure Data Sources

The following are the specific files used for the IRF and LTCH measures and links to their documentation:

Medicare Inpatient claims (Standard Analytical Files), Index PAC claims

- Documentation for the Medicare claims data is provided online by ResDAC. The following web page includes data dictionaries for the Standard analytical files (Inpatient RIF): <http://www.resdac.org/cms-data/files/ip-rif/data-documentation>

- Medicare Enrollment Database - Information about the Enrollment Database may be found at: <http://aspe.hhs.gov/datacncl/datadir/cms.htm>
- Medicare Denominator files - Documentation available at: <http://www.cms.gov/Research-Statistics-Data-and-Systems/Files-for-Order/IdentifiableDataFiles/DenominatorFile.html>

SNF Measure Data Sources

The following are the specific files used for the SNF measure and links to their documentation:

Medicare Inpatient Claims (MedPAR RIF), Index SNF Claims:

- Documentation for the Medicare claims data is provided online by the CMS contractor, Research Data Assistance Center (ResDAC) at the University of Minnesota. The following web page includes data dictionaries for the MedPAR RIF: <http://www.resdac.org/cms-data/files/medpar-rif>
- Medicare Enrollment Database - Information about the Enrollment Database may be found at: <http://aspe.hhs.gov/datacncl/datadir/cms.htm>
- Medicare Denominator files - Documentation available at: <http://www.cms.gov/Research-Statistics-Data-and-Systems/Files-for-Order/IdentifiableDataFiles/DenominatorFile.html>

2.1.7 Measure Time Window

Time windows vary across settings due to variation in facility sizes across settings. The measure time window is two years in IRF and LTCH settings, and one year in the SNF setting. Specific measure time window descriptions for each setting are provided below.

IRF and LTCH Time Windows: In the IRF and LTCH settings, the measure is calculated using two years of data. All IRF and LTCH stays during the two-year time window, except those that meet the exclusion criteria, are included in the measure. For patients with multiple stays during the two-year time window, each stay is eligible for inclusion in the measure. Data from CY 2012-2013 were used to develop this measure.

SNF Time Window: In the SNF setting, the measure is calculated using one year of data. All SNF stays during the one-year time window, except those that meet the exclusion criteria, are included in the measure. For SNF residents with multiple SNF stays during the one year window, each stay is eligible for inclusion in the measure. Data from CY 2013 were used to develop this measure.

2.1.8 Statistical Risk Model and Risk Adjustment Covariates

We used a hierarchical logistic regression method to predict the probability of discharge to community. Patient/resident characteristics related to discharge and a marker for the specific

discharging facility are included in the equation. The equation is hierarchical in that both individual patient/resident characteristics are accounted for, as well as the clustering of patient/resident characteristics by facility. The statistical model estimates both the average predictive effect of the patient/resident characteristics across all facilities, and the degree to which each facility has an effect on discharge to community that differs from that of the average facility. The facility effects are assumed to be randomly distributed around the average (according to a normal distribution). When computing the facility effect, hierarchical modeling accounts for the known predictors of discharge to community, on average, such as patient/resident characteristics, the observed facility rate, and the number of facility stays eligible for inclusion in the measure. The estimated facility effect is determined mostly by the facility's own data if the number of patient/resident discharges is relatively large (as the estimate would be relatively precise), but is adjusted toward the average if the number of patient/resident discharges is small (as that would yield a less precise estimate).

We used the following model:

Let Y_{ij} , denote the outcome (equal to 1 if patient/resident i is discharged to community, 0 otherwise) for a patient/resident i at facility j ; Z_{ij} denotes a set of risk adjustment variables. We assume the outcome is related to the risk adjusters via a logit function with dispersion:

$$\begin{aligned} \text{logit}(\text{Prob}(Y_{ij}=1)) &= \alpha_j + \beta * Z_{ij} + \varepsilon_{ij} \\ \alpha_j &= \mu + \omega_j ; \omega_j \sim N(0, \tau^2) \end{aligned} \quad (1)$$

where $Z_{ij} = (Z_1, Z_2, \dots, Z_k)$ is a set of k patient/resident-level risk adjustment variables; α_j represents the facility-specific intercept; μ is the adjusted average outcome across all facilities; τ^2 is the between-facility variance component; and $\varepsilon \sim N(0, \sigma^2)$ is the error term. The hierarchical logistic regression model is estimated using SAS software (PROC GLIMMIX: SAS/STAT User's Guide, SAS Institute Inc.).

The estimated equation is used twice in the measure. The sum of the probabilities of discharge to community of all patients/residents in the facility measure, including both the effects of patient/resident characteristics and the facility, is the "predicted number" of discharges to community after adjusting for the facility's case mix. The same equation is used without the facility effect to compute the "expected number" of discharges to community for the same patients/residents at the average facility. The ratio of the predicted-to-expected number of discharges to community is a measure of the degree to which discharges to community are higher or lower than what would otherwise be expected. This standardized risk ratio is then multiplied by the mean discharge to community rate for all facility stays for the measure, yielding the risk-standardized discharge to community rate for each facility. Please note that the estimation procedure is recalculated for each measurement period. Re-estimating the models for each measurement period allows the estimated effects of the patient/resident characteristics to vary over time as patient/resident case-mix and medical treatment patterns change.

Risk adjustment variables include demographic and eligibility characteristics; principal diagnoses; types of surgery or procedures from the prior short-term acute care stay; comorbidities; length of stay and intensive care utilization from the prior short-term acute care stay; dialysis in the prior acute stay; and number of prior hospitalizations in the year preceding

the PAC admission. Risk adjustment variable descriptions are provided below. See Appendix Table 1 for the full list of variables in the risk adjustment models.

- 1) Age and sex groups.
- 2) End stage renal disease (ESRD) or disability as original reason for entitlement.
- 3) Principal diagnosis (Clinical Classifications Software (CCS) groups) from the prior acute stay in the past 30 days. The ICD-9 codes from the prior acute claim are grouped clinically using the CCS for ICD-9 diagnoses developed by the Agency for Healthcare Research and Quality (AHRQ).⁴⁹
- 4) Case-Mix Groups (in the IRF model).
- 5) Surgical procedure categories (if present) based on the prior acute stay in the past 30 days. The procedures are grouped using the CCS classes for ICD-9 procedures developed by AHRQ.
- 6) Dialysis in prior acute stay where ESRD not indicated.
- 7) Indicator for ESRD status.
- 8) Length of prior acute hospital stay in days, for patients/residents whose prior acute stay was in a non-psychiatric hospital (categorical variables are used to account for nonlinearity); indicator of prior psychiatric hospital stay for patients/residents whose prior acute stay was in a psychiatric hospital.
- 9) Number of intensive/cardiac care days during the prior acute stay (in the LTCH model).
- 10) Ventilator use during the post-acute stay (in the LTCH and SNF models).
- 11) Comorbidities (Hierarchical Condition Categories) (based on prior acute stay in the past 30 days or based on a one year look back, depending on the specific comorbidity). Comorbidities are clustered using the Hierarchical Condition Categories [HCC] groups used by CMS.⁵⁰
- 12) Number of prior acute hospital discharges in the past year, not including the hospitalization in the 30 days prior to the post-acute stay.

⁴⁹ AHRQ CCS groupings of ICD-9 codes - Documentation available at: <http://www.hcup-us.ahrq.gov/toolsoftware/ccs/ccs.jsp>

⁵⁰ CMS-HCC Mappings of ICD-9 Codes: Mappings are included in the software at the following website: <http://www.cms.gov/Medicare/Health-Plans/MedicareAdvtgSpecRateStats/Risk-Adjustors.html>

2.1.9 Measure Calculation Algorithm

The following steps describe the calculation algorithm/measure logic for the discharge to community measures:

- Step 1:* Identify patients/residents meeting the criteria for the target population, after applying measure exclusions.
- Step 2:* Identify patients/residents meeting the numerator criteria, i.e., discharge to community, no unplanned readmissions on the day of discharge or in the 31 days following discharge, and no death on the day of discharge or in the 31 days following discharge.
- Step 3:* Identify presence or absence of risk adjustment variables for each patient/resident.
- Step 4:* Calculate the predicted and expected number of discharges to community for each facility using the hierarchical logistic regression model.

The predicted number of discharges to community for each facility is calculated as the sum of the predicted probability of discharge to community for each patient/resident discharged from the facility and included in the measure, including the facility-specific effect.

To calculate the predicted number of discharges to community, $pred_j$, for index facility stays at facility $_j$, we used the following equation:

$$pred_j = \sum \text{logit}^{-1}(\mu + \omega_i + \beta * Z_{ij}) \quad (2)$$

where the sum is over all stays in facility $_j$, and ω_i is the random intercept.

To calculate the expected number exp_j , we used the following equation:

$$exp_j = \sum \text{logit}^{-1}(\mu + \beta * Z_{ij}) \quad (3)$$

- Step 5:* Calculate the standardized risk ratio for each facility, as the ratio of the predicted to expected number of discharges to community.

To calculate the facility-wide standardized risk ratio, SRR_j , we used the following equation:

$$SRR_j = pred_j / exp_j \quad (4)$$

- Step 6:* Calculate the risk-standardized discharge to community rate for each facility.

To aid interpretation, the facility-wide standardized risk ratio, SRR_j , obtained from equation (4) is then multiplied by the overall national raw

discharge to community rate for all facility stays, \bar{Y} , to produce the facility-wide risk-standardized discharge to community rate (RSR_j).

To calculate the risk-standardized discharge to community rate for each facility, we used the following equation:

$$RSR_j = SRR_j * \bar{Y} \quad (5)$$

NOTE: Because the statistic described in Step six is a complex function of parameter estimates, re-sampling and simulation techniques (e.g., bootstrapping) may be necessary to derive a confidence interval estimate for the final risk-standardized rate, to characterize the uncertainty of the estimate.

See **Appendix 1, Table 1-1** for risk adjustment model results. Distribution of facility-level discharge to community rates is provided in **Appendix 1, Table 1-2** and **Appendix 1, Figure 1-1**.

2.2 Potentially Preventable 30-Day Post-Discharge Readmission Measure for Inpatient Rehabilitation Facility (IRF) Quality Reporting Program (QRP)

2.2.1 Measure Description

This set of potentially preventable readmission (PPR) measures for post-acute care (PAC) estimates the risk-standardized rate of unplanned, potentially preventable readmissions for patients (Medicare fee-for-service [FFS] beneficiaries) who receive services in one of the following post-acute care provider types: skilled nursing facilities (SNFs), inpatient rehabilitation facilities (IRFs), and long-term care hospitals (LTCH). This measure is conceptualized uniformly across the PAC settings, in terms of the definition of the PPR outcome, the approach to risk adjustment, and the measure calculation.

These outcome measures reflect readmission rates for patients who are readmitted to a short-stay acute-care hospital or an LTCH with a principal diagnosis considered to be unplanned and *potentially preventable*.

Four PPR PAC measures are being developed.

- 1) Potentially Preventable 30-Day Post-Discharge Readmission Measure for Skilled Nursing Facility Quality Reporting Program (IMPACT)
- 2) Potentially Preventable 30-Day Post-Discharge Readmission Measure for Inpatient Rehabilitation Facility Quality Reporting Program (IMPACT)
- 3) Potentially Preventable 30-Day Post-Discharge Readmission Measure for Long-Term Care Hospital Quality Reporting Program (IMPACT)
- 4) Potentially Preventable Within Stay Readmission Measure for Inpatient Rehabilitation Facilities. Note: This measure is not being developed to meet IMPACT Act requirements.

Three of these measures assess PPR within a 30-day window following discharge from PAC—one measure for each PAC setting (i.e. SNF, IRF, and LTCH)—and are being developed to meet the requirements of the IMPACT Act. An additional IRF measure assesses PPR during the IRF stay (referred to as the within-stay window), and is being developed for use in the IRF Quality Reporting Program. There is also a related SNF measure of potentially preventable hospital readmissions, which is being developed along with the measures cited above in order to meet the requirements of the Protecting Access to Medicare Act of 2014; this measure is detailed in a separate document.

Each measure calculates a risk-adjusted PPR rate for each PAC provider. This is derived by first calculating a standardized risk ratio -- the predicted number of readmissions at the PAC provider (facility) divided by the expected number of readmissions for the same patients if treated at the average PAC provider. The standardized risk ratio is then multiplied by the mean readmission rate in the population (i.e., all Medicare FFS patients included in the measure) to generate the PAC provider-level standardized readmission rate of potentially preventable readmissions.

For these PPR measures, readmissions that are usually for planned procedures are not counted as being potentially preventable (see details below).

2.2.2 Purpose/Rationale for the Measure

Hospital readmissions among the Medicare population are common, costly, and often preventable.⁵¹⁻⁵² The Medicare Payment Advisory Commission (MedPAC) and a study by Jencks et al. estimated that 17-20 percent of Medicare beneficiaries discharged from the hospital were readmitted within 30 days. Among these hospital readmissions, MedPAC has estimated that 76 percent were considered potentially avoidable--associated with \$12 billion in Medicare expenditures.^{53,54}

The Centers for Medicare & Medicaid Services (CMS) has addressed the high rates of hospital readmissions for the acute care hospital setting and more recently, among post-acute care providers. For example, CMS developed the following all-cause readmission measures: All-Cause Unplanned Readmission Measure for 30 days Post Discharge from Inpatient Rehabilitation Facilities (IRFs), All-Cause Unplanned Readmission Measure for 30 days Post Discharge from Long-Term Care Hospitals (LTCHs), and the Skilled Nursing Facility (SNF) 30-Day All-Cause Readmission Measure (NQF #2380, #2502, #2512, and #2510, respectively).⁵⁵ These measures were endorsed by the National Quality Forum (NQF). The IRF and LTCH measures were adopted for their respective quality reporting programs for public reporting, and

⁵¹ Friedman, B. and J. Basu, The rate and cost of hospital readmissions for preventable conditions. *Med Care Res Rev*, 2004. **61**(2): p. 225-40.

⁵² Jencks, S.F., M.V. Williams, and E.A. Coleman, Rehospitalizations among Patients in the Medicare Fee-for-Service Program. *New England Journal of Medicine*, 2009. **360**(14): p. 1418-1428.

⁵³ *Ibid.*

⁵⁴ MedPAC, Payment policy for inpatient readmissions, in Report to the Congress: Promoting Greater Efficiency in Medicare. 2007: Washington D.C. p. 103-120.

⁵⁵ National Quality Forum., All-Cause Admissions and Readmissions Measures. April 2015. p. 1-319.

the SNF measure was adopted for value-based purchasing. The NQF-endorsed measures focus on all-cause readmissions and are not cross-setting in that the specifications differ by measure.

Current work is focused on the development of potentially preventable hospital readmission measures for post-acute care, as directed by Congress through the *Improving Medicare Post-Acute Care Transformation Act of 2014* (IMPACT Act). The IMPACT Act requires the development and submission of standardized data from post-acute care settings with the intent for cross-setting quality comparison to promote patient-centeredness.⁵⁶ This includes the requirement to develop and implement measures to reflect all-condition risk-adjusted potentially preventable hospital readmission rates.

2.2.3 Denominator

The denominator for the PPR measures is computed the same way as the numerator, but the facility effect is set at the average. The details of the readmission types counted in the numerator and the patients who are included in the measures are below.

For the eligible PAC stays at each facility, the measure denominator is the risk-adjusted expected number of readmissions. This estimate includes risk adjustment for patient characteristics with the facility effect removed. The “expected” number of readmissions is the predicted number of risk-adjusted readmissions if the same patients were treated at the average PAC provider appropriate to the measure.

This population, like that of the numerator, is the group of Medicare FFS PAC patients who are not excluded for the reasons below.

Denominator Exclusions: SNF, IRF, and LTCH Post-Discharge Measures

The post-PAC discharge PPR measures are based on Medicare FFS claims data and include PAC discharges to non-hospital post-acute levels of care or to the community. The observation window is 30-days after discharge from a PAC facility; this window of observation excludes the day of discharge and the day thereafter (i.e. the 30 days starts 2 days after the discharge date). Stays ending in transfers to the same level of care or acute hospitals are excluded. Only PAC stays where patients/residents had a short-term acute care stay within 30 days prior to the PAC admission date are included in the measures. Prior proximal hospital stays include an inpatient admission to an acute care hospital (including IPPS, CAH, or a psychiatric hospital).

- 1) *Patients/residents who died during the SNF/IRF/LTCH stay.*

Rationale: The PPR measures are not relevant for patients who died during their PAC stay because there is no post-PAC discharge period to observe.

⁵⁶ United States Congress., H.R. 4994. IMPACT Act of 2014. 2014: United States of America. p. 1-19

- 2) *Patients/residents less than 18 years old.*

Rationale: Patients under 18 years old are not included in the target population for this measure. Pediatric patients/residents are relatively few and may have different patterns of care than adults.

- 3) *Patients/residents who were transferred at the end of a stay to another SNF/IRF/LTCH or short-term acute care hospital.*

Rationale: SNF, IRF, or LTCH patients/residents who were transferred to another SNF/IRF/LTCH or short-term acute-care hospital are excluded from this measure because the transfer suggests that either their SNF/IRF/LTCH treatment has not been completed or that their condition worsened, requiring a transfer (i.e. readmission) back to the acute care setting. The intent of these measures is to follow patients/residents deemed well enough to be discharged to a less intensive care setting (i.e., discharged to less intense levels of care or to the community).

- 4) *Patients/residents who were not continuously enrolled in Part A FFS Medicare for the 12 months prior to the SNF/IRF/LTCH admission date, and at least 30 days after SNF/IRF/LTCH discharge date.*

Rationale: The adjustment for certain comorbid conditions in the measures requires information on acute inpatient claims for one year prior to the SNF/IRF/LTCH admission, and readmissions must be observable in the observation window following discharge. Patients/residents without Part A coverage or who are enrolled in Medicare Advantage plans will not have complete inpatient claims in the system.

- 5) *Patients/residents who did not have a short-term acute-care stay within 30 days prior to a SNF/IRF/LTCH admission date.*

Rationale: These measures require information from the prior short-term acute-care stay in the elements used for risk adjustment.

- 6) *Patients/residents discharged against medical advice (AMA).*

Rationale: Patients discharged AMA are excluded because these patients have not completed their full course of treatment in the opinion of the facility.

- 7) *Patients/residents for whom the prior short-term acute-care stay was for nonsurgical treatment of cancer.*

Rationale: Consistent with the Hospital Wide Readmission (HWR) Measure (NQF #1789), patients/residents for whom the prior short-term acute-care stay was for nonsurgical treatment of cancer are excluded because these patients were identified as following a very different trajectory after discharge, with a particularly high mortality rate.

- 8) *Patients/residents who were transferred to a federal hospital from the PAC facility.*

Rationale: Patients/residents who are transferred to federal hospitals will not have complete inpatient claims in the system.

- 9) *Patients/residents who received care from a provider located outside of the United States, Puerto Rico, or a U.S. territory.*

Rationale: Patients/residents who received care from foreign providers may not have complete inpatient claims in the system, and these providers may not be subject to the same policy decisions related to readmissions.

- 10) *SNF/IRF/LTCH stays with data that are problematic (e.g., anomalous records for hospital stays that overlap wholly or in part, or are otherwise erroneous or contradictory). This also includes SNF stays for patients who exhausted their Medicare benefits for SNF coverage.*

Rationale: This measure requires accurate information from the SNF/IRF/LTCH stay and prior short-term acute-care stays, for the elements used in risk adjustment. No-pay PAC stays involving exhaustion of Part A benefits are also excluded.

- 11) *SNF stays in which the prior proximal hospitalization was for pregnancy.*

Rationale: This is a very atypical reason for beneficiaries to be admitted to SNFs.

Denominator Exclusions: IRF Within-Stay Measure

Like the 30-day post-IRF discharge PPR measure, the IRF within-stay measure includes all IRF discharges after the appropriate exclusions have been applied. All exclusions listed above for the IRF post-discharge measure apply to the IRF within-stay measure *except* for Exclusion 3, Exclusion 4, and Exclusion 5.

Exclusion 3 is not applicable. This exclusion is related to transfers/readmissions at the end of the IRF stay, which are the focus of the within-stay measure. The observation window is limited to a patient's length of stay in the IRF, including the day of discharge and the day after. Given the post-IRF discharge measure excludes the day of IRF discharge and the day thereafter (the 30 days starts 2 days after discharge), the within-stay observation window includes the period from admission through the day of IRF discharge and the day after. The within-stay measure is intended to capture readmissions during the IRF stay (i.e. program interruptions where the patient is readmitted to the acute care setting) and readmissions (i.e. acute care transfers) at the end of the IRF stay. Note: The post-IRF discharge window for the PPR measure and the window for the all-cause post-IRF discharge measure (NQF #2502) do not overlap with this within-stay window.

Another minor difference relates to exclusion 4. Rather than exclude patients who are not continuously enrolled in Part A FFS Medicare for at least 30 days after IRF discharge, we only require patients to be continuously enrolled during the IRF stay (i.e. the readmission window).

Exclusion 5 varies for the IRF within-stay measure in that it requires patients/residents to have a short-term acute-care stay within 1 day prior to IRF admission (instead of 30 days as in the post-PAC discharge measures). This measure is focused on the transition to the IRF, which requires there to be a shorter gap between the prior hospital discharge and IRF admission.

2.2.4 Numerator

As described, the index PAC admission must have occurred within up to 30 days of discharge from a prior proximal hospital stay (including IPPS, CAH, or a psychiatric hospital). Hospital readmissions include readmissions to a short-stay acute-care hospital or an LTCH, with a diagnosis considered to be unplanned and potentially preventable. Note: Readmissions to inpatient psychiatric facilities are considered planned and not counted for the purposes of this measure.

The numerators of these measures are mathematically related to the number of patients/residents in the target population who have the event of a potentially preventable, unplanned readmission (PPR definitions and planned readmissions are further described below) during the specific readmission window (i.e. 30-day post-PAC discharge or within the PAC stay). Each measure includes only one readmission window, as described above.

The measures do not have a simple form for the numerator and denominator—that is, the risk adjustment method does not make the observed number of readmissions the numerator, and a predicted number the denominator. Instead, the numerator is the risk-adjusted estimate of the number of unplanned readmissions that occurred within 30 days of PAC discharge. This estimate starts with the observed readmissions, and is then risk-adjusted for patient characteristics and a statistical estimate of the PAC provider’s effect, beyond patient case mix.

The prediction equations are based on a logistic statistical model with a 2-level hierarchical structure. The patient/residents stays in the model have an indicator as to which PAC provider they are discharged from and the effect of the provider is measured as a positive or negative shift in the intercept term of the equation. The facility effects are modeled as belonging to a normal (Gaussian) distribution centered at 0, and are estimated along with the effects of patient characteristics in the model.

The data are from Medicare FFS inpatient claims, and eligibility and enrollment data. Because this measure is claims-based, there is no additional data collection or submission burden for providers.

See below for more details on the data sources.

Note: These measures were developed with ICD-9 procedure and diagnosis codes. ICD-10 was implemented on October 1, 2015; when we calculate this measure using data from calendar year 2015, we will use ICD-10 codes. Preliminary lists of the PPR definitions using ICD-10 codes can be found in **Appendix 2, Table 2-2** and **Table 2-4**. Provisional ICD-10 mappings of the PAC additions to the CMS Planned Readmission Algorithm for NQF #2502 can be found here (see Appendix A6): <http://www.qualityforum.org/ProjectMeasures.aspx?projectID=73619>

Numerator Details: Readmissions Counted in Measures

PPR Definitions:

Some general methods and algorithms have been developed to assess potentially avoidable or preventable hospitalizations and readmissions for the general Medicare population, such as the Agency for Healthcare Research and Quality's (AHRQ) Prevention Quality Indicators (PQI), approaches developed by and for MedPAC, and proprietary approaches, such as the 3M™ algorithm for Potentially Preventable Readmissions.⁵⁷⁻⁵⁸⁻⁵⁹ However, there is no consensus on how to define potentially avoidable or preventable readmissions, especially among Medicare beneficiaries who utilize PAC services including SNF, IRF, and LTCH. Recent work led by Kramer et al. for MedPAC identified 13 conditions that were deemed potentially preventable among the SNF and IRF populations;^{60,61} however, these conditions did not differ by PAC setting or readmission window (i.e. during the PAC stay or post-PAC discharge). To support the development of potentially preventable hospital readmission measures among patients/residents who use PAC, measure development contractors (RTI International and Abt Associates) have developed an approach to define potentially preventable readmissions, building on existing research in this area, and are developing measures to address this high priority area.

The literature shows that some hospital readmissions can be prevented, and that many of these readmissions occur in the context of PAC, including SNF, IRF, and LTCH.^{62,63} For certain diagnoses, proper care and management of patients' conditions (in the facility or by primary care following discharge) along with appropriate, clearly explained and implemented discharge instructions and referrals, can often prevent a patient's readmission to the hospital. Identifying these PPR conditions will assist healthcare providers' efforts to improve quality of care and coordination across the care continuum.

In order to develop PPR definitions for PAC, we conducted a comprehensive environmental scan to identify studies and previously published methodologies related to potentially preventable hospitalizations and hospital readmissions. The evidence specific to PAC is limited, and we found substantial variation across methodologies for defining potentially preventable hospitalizations or readmissions. Based on this scan, we compiled a list of all PPR

conditions described in the literature. This list had considerable overlap with the Ambulatory Care Sensitive Conditions (ACSC) / PQI, developed by the AHRQ.

We used the ACSC approach as the starting point for this work. Given clinical evidence that these conditions can be avoided with appropriate access to high quality ambulatory care, we found that a majority of these conditions reflect reasons for readmissions that would be considered potentially preventable.⁶⁴ We extended this logic to both the within-PAC stay readmission window and 30-day post-PAC discharge window.

In addition, this PPR definition was informed by empirical analyses. Specifically, we analyzed Medicare claims data to identify the most frequent diagnoses associated with hospital readmissions among patients/residents that received post-acute care. We evaluated whether these common causes for readmission could also be considered potentially preventable, by applying the working conceptual definition for PPR explained above, to each of the diagnoses found in the claims analysis. Some conditions such as pressure ulcers, were not on either the ACSC list or in the preliminary data analyses. However, the literature strongly suggests that readmissions for these conditions can be prevented with close monitoring from healthcare providers and under appropriate ambulatory care.

In developing these sets of PPR conditions, we grouped them based on clinical rationale, as follows:

- 1) Inadequate management of chronic conditions
- 2) Inadequate management of infections
- 3) Inadequate management of other unplanned events
- 4) Inadequate injury prevention

We sought technical expert and detailed clinical input on these definitions and overall approach. The Technical Expert Panel's (TEP) consensus was that it is feasible to develop uniform definitions that may be applied to all PAC providers. Based on TEP feedback, we substantially revised the definitions to remove several proposed PPR conditions (for example, we excluded several chronic conditions included in the ACSC approach, such as readmissions for long-term complications of diabetes) and, in some cases, added new PPR conditions based on TEP input, such as influenza. In instances where no clear consensus was reached among TEP members (e.g., urinary tract infection, septicemia) we deferred to clinical expertise from the measure development team along with results from our environmental scan which suggested that these conditions were appropriate to consider as potentially preventable.

Appendix 2, Table 2-1 summarizes the set of conditions we considered potentially preventable for the 30-day post-PAC discharge readmission window based on TEP input. **Appendix 2, Table 2-3** summarizes the larger set of conditions we considered potentially

⁶⁴ AHRQ Quality Indicators—Guide to Prevention Quality Indicators: Hospital Admission for Ambulatory Care Sensitive Conditions. Rockville, MD: Agency for Healthcare Research and Quality, 2001. AHRQ Pub. No. 02-R0203.

preventable for the within-stay readmission window. Both lists of PPR conditions are organized by the clinical rationale for each condition’s inclusion on this list.

In order for a readmission to be considered potentially preventable, it must be coded as the principal diagnosis on the readmission claim. However, there are some exceptions based on the PQI specifications, as noted in the appendices (see dehydration conditions).

Planned Readmissions

These measures are focused on readmissions that are potentially preventable and *unplanned*. Thus, planned readmissions are not counted in the numerator—PPRs are only counted in the numerator if the readmission is considered unplanned. Planned readmissions are defined largely by the definition used for the HWR measure, and were revised to include additional procedures determined suitable for PAC, with input from a Technical Expert Panel convened by the CMS contractor, RTI International. Both are described in greater detail below. ICD-9 codes for these additional procedures were identified by a certified coder.

If a readmission claim contains a code for a procedure that is frequently a planned procedure, then that readmission is designated to be a planned readmission. However, the readmission is reclassified as unplanned if the claim also contains a code indicating one or more acute diagnoses from a specified list, which can be found in **Appendix 2, Table 2-8**.

Appendix 2, Table 2-9 presents the list of codes for procedures identified as “planned” for PAC, which were not included in the CMS Planned Readmission Algorithm at the time of its development. These procedures and diagnoses are currently defined by ICD-9 procedure and diagnosis codes grouped by the Clinical Classification Software (CCS), developed by the AHRQ. They are included as full CCS classes where appropriate, or by individual codes, if necessary. Readmissions to psychiatric hospitals or units are also classified as planned readmissions.

The Appendix includes details on the planned readmission definitions, including the CMS Planned Readmission Algorithm version 3.0 (**Appendix 2, Figure 2-1 and Tables 2-5 to 2-8**) and a table summarizing the additional planned readmissions added for PAC (**Appendix 2, Table 2-9**). Note this approach is consistent with that used for the NQF-endorsed SNF, IRF, and LTCH all-cause readmission measures (NQF #2510, 2502, and 2512, respectively).

Readmission Time Frames

The conceptual definition for PPR hinges on the readmission window timeframe. We considered two readmission windows in this work: 1) within-PAC stay and 2) 30 days post-PAC discharge.

For the within-PAC stay window, potentially preventable readmissions should be avoidable with sufficient medical monitoring and appropriate patient treatment. For patients in the 30-day post-PAC discharge period, a potentially preventable readmission refers to a readmission that should be avoidable with adequately planned, explained, and implemented post discharge instructions, including the establishment of appropriate follow-up ambulatory care.

Table 2 below summarizes the specific readmission windows that are being developed for each PAC potentially preventable hospital readmission measure. As noted, this reflects the current PPR measures under development; however additional measures may be considered in future work. At this time, CMS is only developing a PPR within stay measure for IRFs. Due to data limitations, specifically that claims are not generated for short program interruptions (<4 days) from LTCHs, CMS is unable to develop a PPR within-stay measure for LTCHs.

2.2.5 Data Sources

All measures are based on administrative claims data.

SNF Measure Data Sources: This measure is for Medicare beneficiaries and uses the data in the Medicare eligibility files and inpatient claims data. The eligibility files provide information on date of birth, sex, reasons for Medicare eligibility, periods of Part A coverage, and periods in the fee-for-service program. The data elements from the Medicare FFS claims are those basic to the operation of the Medicare payment systems and include date of admission, date of discharge, diagnoses, procedures, indicators for use of dialysis services, and indicators of whether the Part A benefit was exhausted. The inpatient claims data files contain beneficiary-level SNF and other hospital records. No data beyond the bills submitted in the normal course of business are required from providers for the calculation of this measure. The following are the specific files and links to their documentation:

2.2.6 Measure Time Window

Time windows vary across settings due to variation in facility sizes across settings. The measure time window is two years in IRF and LTCH settings, and one year in the SNF setting. Specific measure time window descriptions for each setting are provided below.

SNF Time Window: In the SNF setting, the measure will be calculated using one year of data. All SNF stays during the one-year time window, except those that meet the exclusion criteria, will be included in the measure. For SNF residents with multiple SNF stays during the one year window, each stay is eligible for inclusion in the measure. Data from calendar year 2013 data was used to develop this PPR measure.

Rationale: Through the analytic work to develop this and an earlier SNF readmission measure (NQF #2510), we found one year of data to be sufficient to calculate this measure in a statistically reliable manner. This is because the reliability of a SNF's measure rate is related to the number of SNF stays included in the measure.

IRF and LTCH Time Windows: In the IRF and LTCH settings, the measure will be calculated using two years of data. All IRF and LTCH stays during the two-year time window, except those that meet the exclusion criteria, will be included in the measure. For patients with multiple stays during the two-year time window, each stay will be eligible for inclusion in the measure. Data from 2012-2013 were used for measure development.

Rationale: Through the analytic work to develop these and previously developed measures, we found that one year of claims data provided a somewhat limited sample size at the

provider level. In order to have a more sufficient sample size, we expanded the data to include two consecutive years of claims data. In this way, the IRF and LTCH PPR measures diverge from the SNF measures which have substantially larger samples sizes compared to the IRF and LTCH settings. Pooling two years of data provides more reliable and stable estimates.

Note: For the purposes of public reporting, a minimum of 25 eligible stays is required.

2.2.7 Statistical Risk Model and Risk Adjustment Covariates

The statistical methods, including risk adjustment, were developed to harmonize with the HWR measure (NQF #1789) as well as the SNF, IRF, and LTCH all-cause readmission measures. The following section summarizes the risk adjustment approach for all PPR measures.

A hierarchical regression method using a logistic regression to predict the probability of a countable (potentially preventable, unplanned) readmission is used. The risk adjusters are predictor variables. The patient characteristics related to each discharge and a marker for the specific discharging PAC provider are included in the equation. The equation is hierarchical in that both individual patient characteristics are accounted for as well as the clustering of patients into PAC providers. The statistical model estimates both the average predictive effect of the patient characteristics across all providers and the degree to which each provider has an effect on readmissions that differs from that of the average provider. The provider effects are assumed to be randomly distributed around the average (according to a normal distribution). When computing the facility effect, hierarchical modeling accounts for the known predictors of readmissions, on average, such as patient characteristics, the observed provider rate, and the number of provider stays eligible for the measure. The estimated provider effect is determined mostly by the provider's own data if the number of patient discharges is relatively large (as the estimate would be relatively precise), but is adjusted toward the average if the number of patient discharges is small (as that would yield an estimate of lower precision).

We used the following model:

Let Y_{ij} , denote the outcome (equal to 1 if patient i is readmitted within 30 days, zero otherwise) for a patient i at PAC j ; Z_{ij} denotes a set of risk factors. We assume the outcome is related linearly to the covariates via a logit function with dispersion:

$$\begin{aligned} \text{logit}(\text{Prob}(Y_{ij}=1)) &= \alpha_j + \beta * Z_{ij} + \varepsilon_{ij} \\ \alpha_j &= \mu + \omega_j ; \omega_j \sim N(0, \tau^2) \end{aligned} \tag{6}$$

where $Z_{ij} = (Z_1, Z_2, \dots, Z_k)$ is a set of k patient-level covariates. α_j represents the PAC specific intercept; μ is the adjusted average outcome over all PAC providers; and τ^2 is the between PAC variance component and $\varepsilon \sim N(0, \sigma^2)$ is the error term. The hierarchical logistic regression model is estimated using SAS software (PROC GLIMMIX: SAS/STAT User's Guide, SAS Institute Inc.)

Note: The description above refers to the method used for each measure applied to each PAC provider type and readmission window.

The estimated equation is used twice in the measure. The sum of the probabilities of readmission of all patients in the measure, including both the effects of patient characteristics

and the provider, is the “predicted number” of readmissions after adjusting for the provider’s case mix. The same equation is used without the provider effect to compute the “expected number” of potentially preventable readmissions for the same patients at the average provider. The ratio of the predicted-to-expected number of readmissions is a measure of the degree to which the readmissions are higher or lower than what would otherwise be expected. This standardized risk ratio is then multiplied by the mean readmission rate for all provider stays for the measure, yielding the risk-standardized readmission rate for each provider. This estimation procedure is recalculated for each measurement period. Estimating the equations for each measurement period allows the estimated effects of the patient characteristics to vary over time as medical treatment patterns change.

Risk-adjustment variables include demographic and eligibility characteristics; principal diagnoses; types of surgery or procedure from the prior short-term stay; comorbidities; length of stay and ICU/CCU utilization from the immediately prior short-term stay; and number of admissions in the year preceding the PAC admission.

The risk adjustment variables include the following:

- 1) Age/sex categories
- 2) Original reason for Medicare entitlement (age, disability or ESRD)
- 3) Surgery category if present (e.g., cardiothoracic, orthopedic), defined as in the HWR model software; the procedures are grouped using the CCS classes for ICD-9 procedures developed by AHRQ
- 4) Receiving dialysis in prior short-term stay, defined by presence of revenue code
- 5) Principal diagnosis on prior short-term claim as in the HWR measure. The ICD-9 codes are grouped clinically using the CCS for ICD-9 diagnoses developed by AHRQ.
- 6) Comorbidities from secondary diagnoses on the prior short-term claim and diagnoses from earlier short-term stays up to one year before PAC admission (these are clustered using the Hierarchical Condition Categories [HCC] groups used by CMS)

Prior Utilization Measures (vary by measure):

- 1) Length of stay in the prior short-term hospital stay (categorical to account for nonlinearity)
- 2) Prior acute ICU/CCU utilization (days) (categorical)
- 3) Count of prior short-term discharges in the prior year

PAC-Specific Risk Adjusters

- 1) IRF: Aggregates of the IRF Case-Mix Groups (CMGs) for IRF patients

- 2) LTCH: Ventilator use — prolonged ventilation in LTCH (defined as ICD-9 procedure code on the index LTCH claim of 96.72, continuous invasive mechanical ventilation for 96 consecutive hours or more). We also intend to test multiple organ failure as a risk adjuster for the LTCH model.

Risk Adjustment for Sociodemographic Status (SDS):

Based on recommendations of the Consensus Standards Approval Committee, the National Quality Forum (NQF) has recently called for adjusting performance measures for sociodemographic status (SDS) when appropriate. CMS is currently conducting empirical testing under an NQF trial period to construct specific variables that capture aspects of SDS in order to account for this factor in the risk-adjustment models for the NQF-endorsed PAC readmission measures. This issue is also relevant for the potentially preventable hospital readmission measures that are currently under development. In addition, work being conducted by the Assistant Secretary for Planning and Evaluation on SDS risk adjustment per the IMPACT Act may provide additional direction on this issue.

2.2.8 Measure Calculation Algorithm

We are developing 4 PPR measures; each is specific to a single PAC provider type and readmission window. Because the overall calculation algorithms and logic are aligned for the set of PPR PAC measures, we describe these technical details for all measures below, rather than duplicating similar information. It is important to clarify that each measure is specific to a single PAC provider type; we do not pool PAC patients across settings in the measure calculation.

The Medicare PAC claims are matched to prior acute hospital stays, hospital stays post-PAC discharge, and patient eligibility data to determine which stays remain in the measure (i.e. not excluded per the exclusions described above) and which have potentially preventable, unplanned readmissions.

The measures are calculated according to the following steps:

- Step 1:* Identify patients/residents meeting the denominator (measure inclusion) criteria.
- Step 2:* Identify patients/residents meeting the numerator (unplanned PPR) criteria taking into account the planned readmission algorithm.
- Step 3:* Identify presence or absence of risk adjustment variables for each patient/resident.
- Step 4:* Calculate the predicted and expected number of readmissions for each PAC provider using hierarchical logistic regression model.

The predicted number of readmissions for each PAC provider for each measure is calculated as the sum of the predicted probability of readmission for each patient included in the measure discharged from the provider, including the provider-specific effect. The model specific

risk standardized readmission ratio for each PAC provider associated with each PPR measure is calculated as follows.

To calculate the predicted number of readmissions $pred_j$ for index PAC provider stays at provider $_j$, we used

$$pred_j = \Sigma \text{logit}^{-1}(\mu + \omega_i + \beta * Z_{ij}) \quad (7)$$

where the sum is over all stays in provider $_j$, and ω_i is the random intercept. To calculate the expected number exp_j use

$$exp_j = \Sigma \text{logit}^{-1}(\mu + \beta * Z_{ij}) \quad (8)$$

Then, as a measure of excess or reduced readmissions among index stays at PAC provider $_j$, calculate the provider-wide standardized risk ratio, SRR_j , as

$$SRR_j = pred_j / exp_j \quad (9)$$

Step 5: Calculate the risk-standardized PAC potentially preventable readmission rate.

The value obtained from equation (4) above, the SRR_j , is the PAC provider-wide standardized risk ratio for provider $_j$. To aid interpretation, the provider-wide standardized risk ratio, SRR_j , is then multiplied by the overall national raw readmission rate for all provider stays, \bar{Y} , to produce the provider-wide risk-standardized readmission rate ($RSRR_j$).

$$RSRR_j = SRR_j * \bar{Y} \quad (10)$$

2.2.9 Measure Results

We present measure results for the set of PPR measures in the **Appendix 2, Tables 2-10 and 2-11, and Figures 2-2 and 2-5**. These appendices include the full risk adjustment model results along with distributions of the unadjusted and risk-standardized PPR rates for facilities.

[This page intentionally left blank.]

SECTION 3
MEASURES AFFECTING THE FY 2020 PAYMENT DETERMINATION AND
SUBSEQUENT YEARS

3.1 Drug Regimen Review Conducted with Follow-Up for Identified Issues- Post Acute Care (PAC) Inpatient Rehabilitation Facility (IRF) Quality Reporting Program (QRP)

3.1.1 Measure Description

Under sections 1899B(a)(2)(E)(i)(III) and 1899B(c)(1)(C) of the Act requires the Secretary to specify a quality measure to address the medication reconciliation domain for IRFs, LTCHs and SNFs by October 1, 2018 and for HHAs by January 1, 2017. We are proposing to adopt the quality measure, Drug Regimen Review Conducted with Follow-Up for Identified Issues-PAC IRF QRP, for the IRF QRP as a patient assessment-based, cross-setting quality measure to meet the IRF requirements with data collection beginning October 1, 2018 for FY 2020 payment determinations and subsequent years.

This proposed measure assesses whether PAC providers were responsive to potential or actual clinically significant medication issue(s) when such issues were identified. Specifically, the proposed quality measure reports the percentage of patient/resident stays in which a drug regimen review was conducted at the time of admission and timely follow-up with a physician occurred each time potential clinically significant medication issues were identified throughout that stay.

Additionally, for this proposed quality measure, drug regimen review is defined as the review of all medications or drugs the patient/resident is taking to identify any potentially clinically significant medication issues. This proposed quality measure utilizes both the processes of medication reconciliation and a drug regimen review, in the event an actual or potential medication issue occurred. The proposed measure informs whether the PAC facility identified and addressed each clinically significant medication issue and if the facility responded or addressed the medication issue in a timely manner.⁶⁵ Of note, drug regimen review in PAC settings is generally considered to include medication reconciliation and review of the patient/resident's drug regimen to identify potential clinically significant medication issues.⁶⁶ This measure is applied uniformly across the PAC settings.

For SNFs, this measure applies to resident stays covered by Medicare Part A. In IRFs, this measure is limited to Medicare (Part A and Part C) patients. In LTCHs, this measure includes all patients.

3.1.2 Purpose/Rationale for the Quality Measure

This proposed measure assesses whether PAC providers were responsive to potential or actual clinically significant medication issue(s) when such issues were identified. Specifically, the proposed quality measure reports the percentage of patient/resident stays in which a drug

⁶⁵ Institute of Medicine. Preventing Medication Errors. Washington DC: National Academies Press; 2006.

⁶⁶ *Ibid.*

regimen review was conducted at the time of admission and timely follow-up with a physician occurred each time potential clinically significant medication issues were identified throughout that stay.

The performance of timely medication reconciliation is valuable to the process of drug regimen review. Preventing and responding to ADEs is of critical importance as ADEs account for significant increases in health services utilization and costs,^{67, 68, 69} including subsequent emergency room visits and re-hospitalizations.⁷⁰ Annual health care costs in the United States are estimated at \$3.5 billion, resulting in 7,000 deaths annually.^{71, 72}

Medication reconciliation is a process of reviewing an individual's complete and current medication list and drug regimen review is included in that process. Medication reconciliation is a recognized process for reducing the occurrence of medication discrepancies that may lead to Adverse Drug Events (ADEs).⁷³ Medication discrepancies occur when there is conflicting information documented in the medical records. The World Health Organization regards medication reconciliation as a standard operating protocol necessary to reduce the potential for ADEs that cause harm to patients. Medication reconciliation is an important patient safety process that addresses medication accuracy during transitions in patient care and in identifying preventable ADEs.⁷⁴ The Joint Commission added medication reconciliation to its list of National Patient Safety Goals (2005), suggesting that medication reconciliation is an integral component of medication safety.⁷⁵ The Society of Hospital Medicine published a statement in agreement of the Joint Commission's emphasis and value of medication reconciliation as a patient safety goal.⁷⁶ There is universal agreement that medication reconciliation directly

addresses patient safety issues that can result from medication miscommunication and unavailable or incorrect information.^{77,78,79}

Medication errors include the duplication of medications, delivery of an incorrect drug, inappropriate drug omissions, or errors in the dosage, route, frequency, and duration of medications. Medication errors are one of the most common types of medical error and can occur at any point in the process of ordering and delivering a medication. Medication errors have the potential to result in an ADE.^{80,81,82,83,84, 85} Inappropriately prescribed medications are also considered a major healthcare concern in the United States for the elderly population, with costs of roughly \$7.2 billion annually.⁸⁶

There is strong evidence that medication discrepancies occur during transfers from acute care facilities to post-acute care facilities. Discrepancies occur when there is conflicting information documented in the medical records. Almost one-third of medication discrepancies have the potential to cause patient harm.⁸⁷ An estimated fifty percent of patients experienced a clinically important medication error after hospital discharge in an analysis of two tertiary care academic hospitals.⁸⁸

Medication reconciliation has been identified as an area for improvement during transfer from the acute care facility to the receiving post-acute care facility. Post-acute care facilities report gaps in medication information between the acute care hospital and the receiving post-

acute care setting when performing medication reconciliation.^{89,90} Hospital discharge has been identified as a particularly high risk point in time, with evidence that medication reconciliation identifies high levels of discrepancy.^{91,92,93,94,95,96} Also, there is evidence that medication reconciliation discrepancies occur throughout the patient stay.^{97,98} For older patients, who may have multiple comorbid conditions and thus multiple medications, transitions between acute and post-acute care settings can be further complicated,⁹⁹ and medication reconciliation and patient knowledge (medication literacy) can be inadequate post-discharge.¹⁰⁰ The proposed quality measure, Drug Regimen Review Conducted with Follow-Up for Identified Issues-PAC IRF QRP, provides an important component of care coordination for PAC settings and would affect a large proportion of the Medicare population who transfer from hospitals into PAC services each year. For example, in 2013, 1.7 million Medicare FFS beneficiaries had SNF stays, 338,000 beneficiaries had IRF stays, and 122,000 beneficiaries had LTCH stays.¹⁰¹

3.1.3 Denominator

The denominator is the number of stays during the SNF, IRF, or LTCH reporting period. Specific denominator definitions for each setting are provided below.

SNF Denominator: The denominator is the number of stays in the selected time window for SNF residents with a SNF PPS Part A Discharge Assessment (A0310H = 1) during the reporting period. A stay is defined as the time period from resident admission or reentry to the

facility (identified by a 5-day PPS assessment) to discharge, which may be an OBRA discharge or a SNF PPS Part A Discharge.

LTCH Denominator: The denominator is the number of patient stays with a discharge or expired assessment (A0250=10, 11, 12) during the reporting period.

IRF Denominator: The denominator is the number of Medicare patient stays* (Part A or Part C) during the reporting period.

*IRF-PAI data are submitted only for Medicare patients (Part A and Part C).

Denominator Exclusions

This measure has no denominator exclusions for IRF, LTCH, and SNF.

3.1.4 Numerator

Number of stays in the denominator where the medical record contains documentation of a drug regimen review conducted at admission with all potential clinically significant medication issues identified during the course of care and followed-up with a physician or physician designee.

Specific numerator definitions for each setting are provided below.

SNF Numerator: The numerator is the number of short-stay residents with an MDS 3.0 assessment during the selected time window for which all of the following are each true:

- 1) The facility conducted a drug regimen review at the admission (N2001= [0,1]) or resident is not taking any medications (N2001= [9]); and
- 2) If potential clinically significant medication issues were identified at the admission (N2001 = [1]), then the facility contacted a physician (or physician-designee) by midnight of the next calendar day and completed prescribed/recommended actions in response to the identified issues (N2003= [1]); and
- 3) The facility contacted a physician (or physician-designee) and completed prescribed/recommended actions by midnight of the next calendar day each time potential clinically significant medication issues were identified since the admission (N2005 = [1]) or no potential clinically significant medications issues were identified since the admission (N2005 = [9]). This condition is evaluated at discharge.

LTCH Numerator: The numerator is the number of stays for which the LTCH CARE Data Set indicated all of the following are each true:

- 1) The facility conducted a drug regimen review at the admission (N2001= [0,1]) or patient is not taking any medications (N2001= [9]); and
- 2) If potential clinically significant medication issues were identified at the admission (N2001 = [1]), then the facility contacted a physician (or physician-designee) by

midnight of the next calendar day and completed prescribed/recommended actions in response to the identified issues (N2003= [1]); and

- 3) The facility contacted a physician (or physician-designee) and completed prescribed/recommended actions by midnight of the next calendar day each time potential clinically significant medication issues were identified since the admission (N2005 = [1]) or no potential clinically significant medications issues were identified since the admission (N2005 = [9]).

IRF Numerator: The numerator is the number of stays for which the IRF PAI indicated all of the following are each true:

- 1) The facility conducted a drug regimen review at the admission (N2001= [0,1]) or patient is not taking any medications (N2001= [9]); and
- 2) If potential clinically significant medication issues were identified at the admission (N2001 = [1]), then the facility contacted a physician (or physician-designee) by midnight of the next calendar day and completed prescribed/recommended actions in response to the identified issues (N2003= [1]); and
- 3) The facility contacted a physician (or physician-designee) and completed prescribed/recommended actions by midnight of the next calendar day each time potential clinically significant medication issues were identified since the admission (N2005 = [1]) or no potential clinically significant medications issues were identified since the admission (N2005 = [9]).

Please note that if data is missing on any of the three items used to calculate the numerator of the measure (specifically, (N2001= [-] or N2003= [-] or N2005= [-])), the patient/resident will not be included in the numerator count though they will continue to be counted in the denominator, assuming all denominator criteria for that patient/resident have been met.

3.1.5 Items Included in the Quality Measure

See **Appendix 3 Table 3-1** for a summary of the setting specific language used to describe the resident or patient within the PAC setting. There are no other differences in the content language within each Drug Regimen Review quality measure item.

N2001. Drug Regimen Review Item

Did a complete drug regimen review identify potential clinically significant medication issues?

0. No - No issues found during review

1. Yes - Issues found during review

9. NA - Patient/Resident is not taking any medications

N2003 Medication Follow-up Item

Did the facility contact a physician (or physician-designee) by midnight of the next calendar day and complete prescribed/recommended actions in response to the identified potential clinically significant medication issues?

- 0. No
- 1. Yes

N2005. Medication Intervention Item

Did the facility contact and complete physician (or physician-designee) prescribed/recommended actions by midnight of the next calendar day each time potential clinically significant medication issues were identified since the Admission?

- 0. No
- 1. Yes
- 9. NA - There were no potential clinically significant medication issues identified since Admission or patient/resident is not taking any medications.

3.1.6 Risk Adjustment

This measure is not risk-adjusted or stratified.

3.1.7 Quality Measure Calculation Algorithm

The following steps are used to calculate the measure:

Step 1: Calculate the denominator count (see Section 3.1.3 for details):

In the SNF setting, identify SNF residents with a PPS Part A Discharge (A0310H=1). Count the number of SNF stays (resident admission or reentry to the facility to discharge, which may be an OBRA discharge or a SNF PPS Part A Discharge) among these residents.

In the LTCH setting, calculate the number of patient stays with a discharge or expired assessment (A0250=10, 11, 12),

In the IRF setting, calculate the number of Medicare (Part A or Part C) patient stays.

Step 2: Calculate the numerator count (see Section 3.1.4 for details):

In the SNF setting, calculate the total number short-stay resident stays in the denominator where the medical record contains documentation of a drug regimen review conducted at: (1) admission, and (2) discharge with a look back through the entire patient stay with all potential clinically significant medication issues identified during the course of care and followed up with a physician or physician designee by midnight of the next calendar day.

In the LTCH setting, calculate the total number of patient stays whose LTCH-CARE assessment indicates that the medical record contains documentation of a drug regimen review conducted at: (1) admission, and (2) discharge with a look back through the entire patient stay with all potential clinically significant medication issues identified during the course of care and followed up with a physician or physician designee by midnight of the next calendar day.

In the IRF setting, calculate the total number of patient stays whose IRF-PAI assessment indicates that the medical record contains documentation of a drug regimen review conducted at: (1) admission, and (2) discharge with a look back through the entire patient stay with all potential clinically significant medication issues identified during the course of care and followed up with a physician or physician designee by midnight of the next calendar day.

Step 3: Calculate the facility's observed score:

Divide the facility's numerator count by its denominator count to obtain the facility's observed score; that is, divide the result of step 2 by the result of step 1.

APPENDIX 1
DISCHARGE TO COMMUNITY-POST ACUTE CARE (PAC) INPATIENT
REHABILITATION FACILITY (IRF) QUALITY REPORTING PROGRAM (QRP)

- Table 1-1. Preliminary Logistic Regression Model Results for Discharge to Community-Post Acute Care (PAC) Inpatient Rehabilitation Facility Quality Reporting Program, 2012-2013
- Table 1-2. Inpatient Rehabilitation Facility: Facility-Level Observed and Risk-Standardized Discharge to Community Rates, 2012-2013
- Figure 1-1. Inpatient Rehabilitation Facility: Facility-Level Observed and Risk-Standardized Discharge to Community Rates, 2012-2013

Table 1-1. Preliminary Logistic Regression Model Results for Discharge to Community-Post Acute Care (PAC) Inpatient Rehabilitation Facility Quality Reporting Program, 2012-2013

Number of beneficiaries included in the model = 572,534.

Observed number (percent) of beneficiaries in the sample who were discharged to community = 393,431 (68.72).

Model c-statistic = 0.705

Based on Medicare fee-for-service claims data from CY 2012-2013. These model estimates only apply to CY 2012-2013 IRF data. We will re-estimate the regression models for each measurement period to allow the estimated effects of patient characteristics to vary over time.

Table 2-1. List of Conditions for Defining Potentially Preventable Hospital Readmissions for 30-Days Post-PAC Discharge with ICD-9 Codes (continued)

Note: These conditions will be used for the post-PAC discharge measures.

Conditions	Diagnosis	ICD-9- CM	30 day post-PAC discharge	Clinical Rationale
Acute renal failure*	*Acute kidney failure with lesion of tubular necrosis	584.5	X	Inadequate management of other unplanned events
	*Acute kidney failure with lesion of renal cortical necrosis	584.6	X	
	*Acute kidney failure with lesion of renal medullary [papillary] necrosis	584.7	X	
	*Acute kidney failure with other specified pathological lesion in kidney	584.8	X	
	*Acute kidney failure, unspecified	584.9	X	
	*Renal Failure NOS	586	X	
	*Surg Compl-Urinary Tract	997.5	X	
Arrhythmia	Atrial fibrillation	427.31	X	Inadequate management of other unplanned events
	Atrial flutter	427.32	X	
Intestinal impaction [145 subset]	Impaction of intestine, unspecified	560.30	X	Inadequate management of other unplanned events
	Fecal impaction	560.32	X	
	Other impaction of intestine	560.39	X	
Pressure ulcers	Chronic ulcer of skin	707.0X 707.2X	X	Inadequate management of other unplanned events

SOURCE: List of potentially preventable readmission conditions from RTI International with ICD-9-CM (version: April 2016).

NOTES: [###] indicates Clinical Classifications Software (CCS) code

To be considered a potentially preventable readmission, diagnosis codes must be the principal diagnosis on the readmission claim, except where noted.

*Ambulatory Care Sensitive Conditions (ACSCs)/Prevention Quality Indicators (PQIs)

** Primary diagnosis with dehydration (codes: 276.50, 276.51, 276.52) as secondary diagnosis

Table 2-2. Preliminary List of Conditions for Defining Potentially Preventable Hospital Readmissions for 30-Days Post-PAC Discharge with ICD-10 Codes

Condition	Subcondition	ICD-10-CM	ICD-10 Description
Adult Asthma*	Asthma* (PQI 05)	J4521	Mild intermittent asthma with (acute) exacerbation
		J4522	Mild intermittent asthma with status asthmaticus
		J4531	Mild persistent asthma with (acute) exacerbation
		J4532	Mild persistent asthma with status asthmaticus
		J4541	Moderate persistent asthma with (acute) exacerbation
		J4542	Moderate persistent asthma with status asthmaticus
		J4551	Severe persistent asthma with (acute) exacerbation
		J4552	Severe persistent asthma with status asthmaticus
		J45901	Unspecified asthma with (acute) exacerbation
		J45902	Unspecified asthma with status asthmaticus
		J45990	Exercise induced bronchospasm
		J45991	Cough variant asthma
		J45998	Other asthma
	Acute Bronchitis*^ (PQI 05)	J200	Acute bronchitis due to Mycoplasma pneumoniae
		J201	Acute bronchitis due to Hemophilus influenzae
		J202	Acute bronchitis due to streptococcus
		J203	Acute bronchitis due to coxsackievirus
		J204	Acute bronchitis due to parainfluenza virus
		J205	Acute bronchitis due to respiratory syncytial virus
		J206	Acute bronchitis due to rhinovirus
		J207	Acute bronchitis due to echovirus
		J208	Acute bronchitis due to other specified organisms
		J209	Acute bronchitis, unspecified
J40	Bronchitis, not specified as acute or chronic		
Chronic obstructive pulmonary disease (COPD)	COPD* (PQI 05)	J410	Simple chronic bronchitis
		J411	Mucopurulent chronic bronchitis
		J418	Mixed simple and mucopurulent chronic bronchitis
		J42	Unspecified chronic bronchitis
		J430	Unilateral pulmonary emphysema [MacLeod's syndrome]
		J431	Panlobular emphysema
		J432	Centrilobular emphysema
		J438	Other emphysema
		J439	Emphysema, unspecified

		L08.89	Other specified local infections of the skin and subcutaneous tissue
		L08.9	Local infection of the skin and subcutaneous tissue, unspecified
Aspiration pneumonitis; food/vomitus [129]		J69.0	Pneumonitis due to inhalation of food and vomit
Arrhythmia		I48.91	Unspecified atrial fibrillation
		I48.92	Unspecified atrial flutter
		I48.0	Paroxysmal atrial fibrillation
		I48.1	Persistent atrial fibrillation
		I48.3	Typical atrial flutter
		I48.4	Atypical atrial flutter
Intestinal impaction		K56.49	Other impaction of intestine
		K56.41	Fecal impaction
Pressure ulcers		L89.90	Pressure ulcer of unspecified site, unspecified stage
		L89.009	Pressure ulcer of unspecified elbow, unspecified stage
		L89.119	Pressure ulcer of right upper back, unspecified stage
		L89.129	Pressure ulcer of left upper back, unspecified stage
		L89.139	Pressure ulcer of right lower back, unspecified stage
		L89.149	Pressure ulcer of left lower back, unspecified stage
		L89.159	Pressure ulcer of sacral region, unspecified stage

(continued)

Table 2-2. Preliminary List of Conditions for Defining Potentially Preventable Hospital Readmissions for 30-Days Post-PAC Discharge with ICD-10 Codes (continued)

Condition	Subcondition	ICD-10-CM	ICD-10 Description
		L89.209	Pressure ulcer of unspecified hip, unspecified stage
		L89.309	Pressure ulcer of unspecified buttock, unspecified stage
		L89.509	Pressure ulcer of unspecified ankle, unspecified stage
		L89.609	Pressure ulcer of unspecified heel, unspecified stage
		L89.819	Pressure ulcer of head, unspecified stage
		L89.899	Pressure ulcer of other site, unspecified stage
		L89.000	Pressure ulcer of unspecified elbow, unstageable
		L89.003	Pressure ulcer of unspecified elbow, stage 3
		L89.004	Pressure ulcer of unspecified elbow, stage 4
		L89.010	Pressure ulcer of right elbow, unstageable
		L89.013	Pressure ulcer of right elbow, stage 3
		L89.014	Pressure ulcer of right elbow, stage 4
		L89.019	Pressure ulcer of right elbow, unspecified stage
		L89.020	Pressure ulcer of left elbow, unstageable
		L89.023	Pressure ulcer of left elbow, stage 3
		L89.024	Pressure ulcer of left elbow, stage 4
		L89.029	Pressure ulcer of left elbow, unspecified stage
		L89.100	Pressure ulcer of unspecified part of back, unstageable
		L89.103	Pressure ulcer of unspecified part of back, stage 3
		L89.104	Pressure ulcer of unspecified part of back, stage 4
		L89.109	Pressure ulcer of unspecified part of back, unspecified stage
		L89.110	Pressure ulcer of right upper back, unstageable

SOURCE: List of potentially preventable readmission conditions from RTI International with ICD-10-CM (version: April 2016).

NOTES: [###] indicates CCS code; *AHRQ PQI ICD-10 v5 specifications

To be considered a potentially preventable readmission, diagnosis codes must be the principal diagnosis on the readmission claim, except where noted.

^Principal of acute bronchitis AND secondary of subcondition COPD

~principal ICD-10-CM code with secondary ICD-10-CM code for subcondition dehydration

Table 2-3. List of Conditions for Defining Potentially Preventable Hospital Readmissions for Within-PAC Stay with ICD-9 Codes

Note: These conditions will be used for the within-PAC stay window.

Conditions	Diagnosis	ICD-9-CM	Within Stay	Clinical Rationale
Adult asthma*	*Extrinsic asthma NOS	493.00	X	Inadequate management of chronic conditions
	*Ext asthma w/ status asth	493.01	X	
	*Ext asthma w(acute) exac	493.02	X

Conditions	Diagnosis	ICD-9-CM	Within Stay	Clinical Rationale
	Acute venous embolism and thrombosis of axillary veins	453.84	X	
	Acute venous embolism and thrombosis of other specified veins	453.89	X	
	Other venous embolism and thrombosis of unspecified site	453.9	X	
	Other pulmonary embolism and infarction	415.19	X	
Head injury	Concussion with no loss of consciousness	850.0	X	Inadequate injury prevention
	Concussion, with loss of consciousness of 30 minutes or less	850.11	X	
	Concussion, with loss of consciousness from 31 to 59 minutes	850.12	X	
	Concussion with moderate loss of consciousness	850.2	X	
	Concussion with prolonged loss of consciousness and return to pre-existing conscious level	850.3	X	
	Concussion with prolonged loss of consciousness, without return to pre-existing conscious level	850.4	X	
	Concussion with loss of consciousness of unspecified duration	850.5	X	
	Concussion, unspecified	850.9	X	
	Cortex (cerebral) contusion without mention of open intracranial wound	851.0X (X=0,1,2,3,4,5,6,9)	X	
	Cortex (cerebral) laceration without mention of open intracranial wound	851.2X (X=0,1,2,3,4,5,6,9)	X	
	Cerebellar or brain stem contusion without mention of open intracranial wound	851.4X (X=0,1,2,3,4,5,6,9)	X	

(continued)

Table 2-3. List of Conditions for Defining Potentially Preventable Hospital Readmissions for Within-PAC Stay with ICD-9 Codes (continued)

Note: These conditions will be used for the within-PAC stay window.

Conditions	Diagnosis	ICD-9-CM	Within Stay	Clinical Rationale
	Cerebellar or brain stem laceration without mention of open intracranial wound	851.6X (X=0,1,2,3,4,5,6,9)	X	
	Other and unspecified cerebral laceration and contusion without mention of open intracranial wound	851.8X (X=0,1,2,3,4,5,6,9)	X	
	Subarachnoid hemorrhage following injury without mention of open intracranial wound	852.0X (X=0,1,2,3,4,5,6,9)	X	
	Subdural hemorrhage following injury without mention of open intracranial wound	852.2X (X=0,1,2,3,4,5,6,9)	X	
	Extradural hemorrhage following injury without mention of open intracranial wound	852.4X (X=0,1,2,3,4,5,6,9)	X	
	Other and unspecified intracranial hemorrhage following injury without mention of open intracranial wound	853.0X (X=0,1,2,3,4,5,6,9)	X	
	Intracranial injury of other and unspecified nature without mention of open intracranial wound	854.0X (X=0,1,2,3,4,5,6,9)	X	
Upper extremity fracture	Closed fracture of clavicle	810.0X (X=0,1,2,3)	X	Inadequate injury prevention
	Open fracture of clavicle	810.1X (X=0,1,2,3)	X	
	Closed fracture of scapula	811.0X (X=0,1,2,3,9)	X	
	Open fracture of scapula	811.1X (X=0,1,2,3,9)	X	
	Fracture of upper end of humerus closed	812.0X (X=0,1,2,3,9)	X	
	Fracture of upper end of humerus open	812.1X (X=0,1,2,3,9)	X	
	Closed fracture of shaft or unspecified part of humerus	812.2X (X=0,1)	X	

(continued)

Table 2-3. List of Conditions for Defining Potentially Preventable Hospital Readmissions for Within-PAC Stay with ICD-9 Codes (continued)

Note: These conditions will be used for the within-PAC stay window.

Conditions	Diagnosis	ICD-9-CM	Within Stay	Clinical Rationale
	Fracture of shaft or unspecified part of humerus open	812.3X (X=0,1)	X	
	Fracture of lower end of humerus closed	812.4X (X=0,1,2,3,4,9)	X	
	Fracture of lower end of humerus open	812.5X (X=0,1,2,3,4,9)	X	
	Fracture of upper end of radius and ulna closed	813.0X (X=0,1,2,3,4,5,6,7,8)	X	
	Fracture of upper end of radius and ulna open	813.1X (X=0,1,2,3,4,5,6,7,8)	X	
	Fracture of shaft of radius and ulna closed	813.2X (X=0,1,2,3)	X	
	Fracture of shaft of radius and ulna open	813.3X (X=0,1,2,3)	X	
	Fracture of lower end of radius and ulna closed	813.4X (X=0,1,2,3,4,5,6,7)	X	
	Fracture of lower end of radius and ulna open	813.5X (X=0,1,2,3,4)	X	
	Fracture of unspecified part of radius with ulna closed	813.8X (X=0,1,2,3)	X	
	Fracture of unspecified part of radius with ulna open	813.9X (X=0,1,2,3)	X	
	Closed fractures of carpal bones	814.0X (X=0,1,2,3,4,5,6,7,8,9)	X	
	Open fractures of carpal bones	814.1X (X=0,1,2,3,4,5,6,7,8,9)	X	
	Closed fracture of metacarpal bones	815.0X (X=0,1,2,3,4,9)	X	
	Open fracture of metacarpal bones	815.1X (X=0,1,2,3,4,9)	X	
	Closed fracture of one or more phalanges of hand	816.0X (X=0,1,2,3)	X	

(continued)

Table 2-3. List of Conditions for Defining Potentially Preventable Hospital Readmissions for Within-PAC Stay with ICD-9 Codes (continued)

Note: These conditions will be used for the within-PAC stay window.

Conditions	Diagnosis	ICD-9-CM	Within Stay	Clinical Rationale
	Open fracture of one or more phalanges of hand	816.1X (X=0,1,2,3)	X	
	Multiple closed fractures of hand bones	817.0	X	
	Multiple open fractures of hand bones	817.1	X	
	Ill-defined closed fractures of upper limb	818.0	X	
	Ill-defined open fractures of upper limb	818.1	X	
	Multiple closed fractures involving both upper limbs, and upper limb with rib(s) and sternum	819.0	X	
	Multiple open fractures involving both upper limbs, and upper limb with rib(s) and sternum	819.1	X	
Lower extremity fracture	Transcervical fracture closed	820.0X (X=0,1,2,3,9)	X	Inadequate injury prevention
	Transcervical fracture open	820.1X (X=0,1,2,3,9)	X	
	Petrochanteric fracture of femur closed	820.2X (X=0,1,2)	X	
	Petrochanteric fracture of femur open	820.3X (X=0,1,2)	X	
	Closed fracture of unspecified part of neck of femur	820.8	X	
	Open fracture of unspecified part of neck of femur	820.9	X	
	Fracture of shaft or unspecified part of femur closed	821.0X (X=0,1)	X	
	Fracture of shaft or unspecified part of femur open	821.1X (X=0,1)	X	
	Fracture of lower end of femur closed	821.2X (X=0,1,2,3,9)	X	
	Fracture of lower end of femur open	821.3X (X=0,1,2,3,9)	X	

(continued)

Table 2-3. List of Conditions for Defining Potentially Preventable Hospital Readmissions for Within-PAC Stay with ICD-9 Codes (continued)

Note: These conditions will be used for the within-PAC stay window.

Conditions	Diagnosis	ICD-9-CM	Within Stay	Clinical Rationale
	Closed fracture of patella	822.0	X	
	Open fracture of patella	822.1	X	
	Fracture of upper end of tibia and fibula closed	823.0X (X=0,1,2)	X	
	Fracture of upper end of tibia and fibula open	823.1X (X=0,1,2)	X	
	Fracture of shaft of tibia and fibula open	823.3X (X=0,1,2)	X	
	Fracture of tibia and fibula, torus fracture	823.4X (X=0,1,2)	X	
	Fracture of unspecified part of tibia and fibula closed	823.8X (X=0,1,2)	X	
	Fracture of unspecified part of tibia and fibula open	823.9X (X=0,1,2)	X	
	Fracture of ankle	824.X (X=0,1,2,3,4,5,6,7,8,9)	X	
	Fracture of calcaneus, closed	825.0	X	
	Fracture of calcaneus, open	825.1	X	
	Fracture of other tarsal and metatarsal bones closed	825.2X (X=0,1,2,3,4,5,9)	X	
	Fracture of other tarsal and metatarsal bones open	825.3X (X=0,1,2,3,4,5,9)	X	
	Closed fracture of one or more phalanges of foot	826.0	X	
	Open fracture of one or more phalanges of foot	826.1	X	
	Other, multiple and ill-defined fractures of lower limb, closed	827.0	X	
	Other, multiple and ill-defined fractures of lower limb, open	827.1	X	
	Closed multiple fractures involving both lower limbs, lower with upper limb, and lower limb(s) with rib(s) and sternum	828.0	X

Table 2-3. List of Conditions for Defining Potentially Preventable Hospital Readmissions for Within-PAC Stay with ICD-9 Codes (continued)

Note: These conditions will be used for the within-PAC stay window.

Conditions	Diagnosis	ICD-9-CM	Within Stay	Clinical Rationale
	Open multiple fractures involving both lower limbs, lower with upper limb, and lower limb(s) with rib(s) and sternum	828.1	X	
	Fracture of unspecified bone, closed	829.0	X	
	Fracture of unspecified bone, open	829.1	X	

SOURCE: List of potentially preventable readmission conditions from RTI International using ICD-9-CM (version: April 2016).

NOTES: [###] indicates Clinical Classifications Software (CCS) code

To be considered a potentially preventable readmission, diagnosis codes must be the principal diagnosis on the readmission claim, except where noted.

*Ambulatory Care Sensitive Conditions (ACSCs)/Prevention Quality Indicators (PQIs)

** Primary diagnosis with dehydration (codes: 276.50, 276.51, 276.52) as secondary diagnosis

Table 2-4. Preliminary List of Conditions for Defining Potentially Preventable Hospital Readmissions for Within-PAC Stay with ICD-10 Codes

Conditions	Subconditions	ICD-10-CM	ICD-10 Description
Adult Asthma*	Asthma* (PQI 05)	J4521	Mild intermittent asthma with (acute) exacerbation
		J4522	Mild intermittent asthma with status asthmaticus
		J4531	Mild persistent asthma with (acute) exacerbation
		J4532	Mild persistent asthma with status asthmaticus
		J4541	Moderate persistent asthma with (acute) exacerbation
		J4542	Moderate persistent asthma with status asthmaticus
		J4551	Severe persistent asthma with (acute) exacerbation
		J4552	Severe persistent asthma with status asthmaticus
		J45901	Unspecified asthma with (acute) exacerbation
		J45902	Unspecified asthma with status asthmaticus
		J45990	Exercise induced bronchospasm
		J45991	Cough variant asthma
		J45998	Other asthma
	Acute Bronchitis*^ (PQI 05)	J200	Acute bronchitis due to Mycoplasma pneumoniae
		J201	Acute bronchitis due to Hemophilus influenzae
		J202	Acute bronchitis due to streptococcus
		J203	Acute bronchitis due to coxsackievirus
		J204	Acute bronchitis due to parainfluenza virus
		J205	Acute bronchitis due to respiratory syncytial virus
		J206	Acute bronchitis due to rhinovirus
		J207	Acute bronchitis due to echovirus
		J208	Acute bronchitis due to other specified organisms
		J209	Acute bronchitis, unspecified
		J40	Bronchitis, not specified as acute or chronic
		Chronic obstructive pulmonary disease (COPD)	COPD* (PQI 05)
J411	Mucopurulent chronic bronchitis		

(continued)

Table 2-4. Preliminary List of Conditions for Defining Potentially Preventable Hospital Readmissions for Within-PAC Stay with ICD-10 Codes (continued)

Conditions	Subconditions	ICD-10-CM	ICD-10 Description
		J418	Mixed simple and mucopurulent chronic bronchitis
		J42	Unspecified chronic bronchitis
		J430	Unilateral pulmonary emphysema [MacLeod's syndrome]
		J431	Panlobular emphysema
		J432	Centrilobular emphysema
		J438	Other emphysema
		J439	Emphysema, unspecified
		J440	Chronic obstructive pulmonary disease with acute lower respiratory infection
		J441	Chronic obstructive pulmonary disease with (acute) exacerbation
		J449	Chronic obstructive pulmonary disease, unspecified
		J470	Bronchiectasis with acute lower respiratory infection
		J471	Bronchiectasis with (acute) exacerbation
		J479	Bronchiectasis, uncomplicated
Congestive heart failure (CHF)		I09.81	Rheumatic heart failure
		I11.0	Hypertensive heart disease with heart failure
		I11.0	Hypertensive heart disease with heart failure
		I11.0	Hypertensive heart disease with heart failure
		I13.0	Hypertensive heart and chronic kidney disease with heart failure and stage 1 through stage 4 chronic kidney disease, or unspecified chronic kidney disease
		I13.2	Hypertensive heart and chronic kidney disease with heart failure and with stage 5 chronic kidney disease, or end stage renal disease
		I13.0	Hypertensive heart and chronic kidney disease with heart failure and stage 1 through stage 4 chronic kidney disease, or unspecified chronic kidney disease

(continued)

Table 2-4. Preliminary List of Conditions for Defining Potentially Preventable Hospital Readmissions for Within-PAC Stay with ICD-10 Codes (continued)

Conditions	Subconditions	ICD-10-CM	ICD-10 Description
		I13.2	Hypertensive heart and chronic kidney disease with heart failure and with stage 5 chronic kidney disease, or end stage renal disease
		I13.0	Hypertensive heart and chronic kidney disease with heart failure and stage 1 through stage 4 chronic kidney disease, or unspecified chronic kidney disease
		I13.2	Hypertensive heart and chronic kidney disease with heart failure and with stage 5 chronic kidney disease, or end stage renal disease
		I50.9	Heart failure, unspecified
		I50.1	Left ventricular failure
		I50.20	Unspecified systolic (congestive) heart failure
		I50.21	Acute systolic (congestive) heart failure
		I50.22	Chronic systolic (congestive) heart failure
		I50.23	Acute on chronic systolic (congestive) heart failure
		I50.30	Unspecified diastolic (congestive) heart failure
		I50.31	Acute diastolic (congestive) heart failure
		I50.32	Chronic diastolic (congestive) heart failure
		I50.33	Acute on chronic diastolic (congestive) heart failure
		I50.40	Unspecified combined systolic (congestive) and diastolic (congestive) heart failure
		I50.41	Acute combined systolic (congestive) and diastolic (congestive) heart failure
		I50.42	Chronic combined systolic (congestive) and diastolic (congestive) heart failure
		I50.43	Acute on chronic combined systolic (congestive) and diastolic (congestive) heart failure
		I50.9	Heart failure, unspecified
		J81.0	Acute pulmonary edema

Conditions	Subconditions	ICD-10-CM	ICD-10 Description
		R65.21	Severe sepsis with septic shock
Dehydration/ Electrolyte imbalance [55]	Dehydration*	E860	Dehydration
		E861	Hypovolemia
		E869	Volume depletion, unspecified
	Hyperosmolality and/or hypernatremia~	E870	Hyperosmolality and hypernatremia
	Gastroenteritis~	A080	Rotaviral enteritis
		A0811	Acute gastroenteropathy due to Norwalk agent
		A0819	Acute gastroenteropathy due to other small round
		A082	Aidenoviral enteritis
		A0831	Calicivirus enteritis
		A0832	Astrovirus enteritis
		A0839	Other viral enteritis
		A084	Viral intestinal infection, unspecified
		A088	Other specified intestinal infections
		A09	Infectious gastroenteritis and colitis, unspecified
		K5289	Other specified noninfective gastroenteritis and colitis
		K529	Noninfective gastroenteritis and colitis, unspecified
			Acute kidney failure~
N171	Acute kidney failure with acute cortical necrosis		
N172	Acute kidney failure with medullary necrosis		
N178	Other acute kidney failure		
N179	Acute kidney failure, unspecified		
N19	Unspecified kidney failure		
N990	Postprocedural (acute) (chronic) kidney failure		
E87.2	Acidosis		
E87.3	Alkalosis		
E87.4	Mixed disorder of acid-base balance		

(continued)

Table 2-4. Preliminary List of Conditions for Defining Potentially Preventable Hospital Readmissions for Within-PAC Stay with ICD-10 Codes (continued)

Conditions	Subconditions	ICD-10-CM	ICD-10 Description
		E87.70	Fluid overload, unspecified
		E87.79	Other fluid overload
		E87.5	Hyperkalemia
		E87.6	Hypokalemia
		E87.8	Other disorders of electrolyte and fluid balance, not elsewhere classified
Skin and subcutaneous tissue infections [197]		L03.021	Acute lymphangitis of right finger
		L03.022	Acute lymphangitis of left finger
		L03.029	Acute lymphangitis of unspecified finger
		L03.041	Acute lymphangitis of right toe
		L03.042	Acute lymphangitis of left toe
		L03.049	Acute lymphangitis of unspecified toe
		L03.121	Acute lymphangitis of right axilla
		L03.122	Acute lymphangitis of left axilla
		L03.123	Acute lymphangitis of right upper limb
		L03.124	Acute lymphangitis of left upper limb
		L03.125	Acute lymphangitis of right lower limb
		L03.126	Acute lymphangitis of left lower limb
		L03.129	Acute lymphangitis of unspecified part of limb
		L03.212	Acute lymphangitis of face
		L03.222	Acute lymphangitis of neck
		L03.321	Acute lymphangitis of abdominal wall
		L03.322	Acute lymphangitis of back [any part except buttock]
		L03.323	Acute lymphangitis of chest wall
		L03.324	Acute lymphangitis of groin
		L03.325	Acute lymphangitis of perineum
	L03.326	Acute lymphangitis of umbilicus	

(continued)

Table 2-4. Preliminary List of Conditions for Defining Potentially Preventable Hospital Readmissions for Within-PAC Stay with ICD-10 Codes (continued)

Conditions	Subconditions	ICD-10-CM	ICD-10 Description
		L03.327	Acute lymphangitis of buttock
		L03.329	Acute lymphangitis of trunk, unspecified
		L03.891	Acute lymphangitis of head [any part, except face]
		L03.898	Acute lymphangitis of other sites
		L03.91	Acute lymphangitis, unspecified
		L03.011	Cellulitis of right finger
		L03.012	Cellulitis of left finger
		L03.019	Cellulitis of unspecified finger
		L03.031	Cellulitis of right toe
		L03.032	Cellulitis of left toe
		L03.039	Cellulitis of unspecified toe
		L03.111	Cellulitis of right axilla
		L03.112	Cellulitis of left axilla
		L03.113	Cellulitis of right upper limb
		L03.114	Cellulitis of left upper limb
		L03.115	Cellulitis of right lower limb
		L03.116	Cellulitis of left lower limb

Conditions	Subconditions	ICD-10-CM	ICD-10 Description
		S62.391B	Other fracture of second metacarpal bone, left hand, initial encounter for open fracture
		S62.392B	Other fracture of third metacarpal bone, right hand, initial encounter for open fracture
		S62.393B	Other fracture of third metacarpal bone, left hand, initial encounter for open fracture
		S62.394B	Other fracture of fourth metacarpal bone, right hand, initial encounter for open fracture
		S62.395B	Other fracture of fourth metacarpal bone, left hand, initial encounter for open fracture
		S62.396B	Other fracture of fifth metacarpal bone, right hand, initial encounter for open fracture
		S62.397B	Other fracture of fifth metacarpal bone, left hand, initial encounter for open fracture
		S62.398B	Other fracture of other metacarpal bone, initial encounter for open fracture
		S62.399B	Other fracture of unspecified metacarpal bone, initial encounter for open fracture
	Closed fracture of phalanx (finger & toe)	S62.501A	Fracture of unspecified phalanx of right thumb, initial encounter for closed fracture
		S62.502A	Fracture of unspecified phalanx of left thumb, initial encounter for closed fracture
		S62.509A	Fracture of unspecified phalanx of unspecified thumb, initial encounter for closed fracture
		S62.511A	Displaced fracture of proximal phalanx of right thumb, initial encounter for closed fracture
		S62.512A	Displaced fracture of proximal phalanx of left thumb, initial encounter for closed fracture

(continued)

Table 2-4. Preliminary List of Conditions for Defining Potentially Preventable Hospital Readmissions for Within-PAC Stay with ICD-10 Codes (continued)

Conditions	Subconditions	ICD-10-CM	ICD-10 Description
		S62.513A	Displaced fracture of proximal phalanx of unspecified thumb, initial encounter for closed fracture
		S62.514A	Nondisplaced fracture of proximal phalanx of right thumb, initial encounter for closed fracture
		S62.515A	Nondisplaced fracture of proximal phalanx of left thumb, initial encounter for closed fracture
		S62.516A	Nondisplaced fracture of proximal phalanx of unspecified thumb, initial encounter for closed fracture
		S62.521A	Displaced fracture of distal phalanx of right thumb, initial encounter for closed fracture
		S62.522A	Displaced fracture of distal phalanx of left thumb, initial encounter for closed fracture
		S62.523A	Displaced fracture of distal phalanx of unspecified thumb, initial encounter for closed fracture
		S62.524A	Nondisplaced fracture of distal phalanx of right thumb, initial encounter for closed fracture
		S62.525A	Nondisplaced fracture of distal phalanx of left thumb, initial encounter for closed fracture
		S62.526A	Nondisplaced fracture of distal phalanx of unspecified thumb, initial encounter for closed fracture
		S62.600A	Fracture of unspecified phalanx of right index finger, initial encounter for closed fracture
		S62.601A	Fracture of unspecified phalanx of left index finger, initial encounter for closed fracture
		S62.602A	Fracture of unspecified phalanx of right middle finger, initial encounter for closed fracture
		S62.603A	Fracture of unspecified phalanx of left middle finger, initial encounter for closed fracture

(continued)

Table 2-4. Preliminary List of Conditions for Defining Potentially Preventable Hospital Readmissions for Within-PAC Stay with ICD-10 Codes (continued)

Conditions	Subconditions	ICD-10-CM	ICD-10 Description
		S72.024R	Nondisplaced fracture of epiphysis (separation) (upper) of right femur, subsequent encounter for open fracture type IIIA, IIIB, or IIIC with malunion
		S72.025B	Nondisplaced fracture of epiphysis (separation) (upper) of left femur, initial encounter for open fracture type I or II
		S72.025C	Nondisplaced fracture of epiphysis (separation) (upper) of left femur, initial encounter for open fracture type IIIA, IIIB, or IIIC
		S72.025E	Nondisplaced fracture of epiphysis (separation) (upper) of left femur, subsequent encounter for open fracture type I or II with routine healing
		S72.025F	Nondisplaced fracture of epiphysis (separation) (upper) of left femur, subsequent encounter for open fracture type IIIA, IIIB, or IIIC with routine healing
		S72.025H	Nondisplaced fracture of epiphysis (separation) (upper) of left femur, subsequent encounter for open fracture type I or II with delayed healing
		S72.025J	Nondisplaced fracture of epiphysis (separation) (upper) of left femur, subsequent encounter for open fracture type IIIA, IIIB, or IIIC with delayed healing
		S72.025M	Nondisplaced fracture of epiphysis (separation) (upper) of left femur, subsequent encounter for open fracture type I or II with nonunion
		S72.025N	Nondisplaced fracture of epiphysis (separation) (upper) of left femur, subsequent encounter for open fracture type IIIA, IIIB, or IIIC with nonunion
		S72.025Q	Nondisplaced fracture of epiphysis (separation) (upper) of left femur, subsequent encounter for open fracture type I or II with malunion

(continued)

Table 2-4. Preliminary List of Conditions for Defining Potentially Preventable Hospital Readmissions for Within-PAC Stay with ICD-10 Codes (continued)

Conditions	Subconditions	ICD-10-CM	ICD-10 Description
		S72.025R	Nondisplaced fracture of epiphysis (separation) (upper) of left femur, subsequent encounter for open fracture type IIIA, IIIB, or IIIC with malunion
		S72.026B	Nondisplaced fracture of epiphysis (separation) (upper) of unspecified femur, initial encounter for open fracture type I or II
		S72.026C	Nondisplaced fracture of epiphysis (separation) (upper) of unspecified femur, initial encounter for open fracture type IIIA, IIIB, or IIIC
		S72.026E	Nondisplaced fracture of epiphysis (separation) (upper) of unspecified femur, subsequent encounter for open fracture type I or II with routine healing
		S72.026F	Nondisplaced fracture of epiphysis (separation) (upper) of unspecified femur, subsequent encounter for open fracture type IIIA, IIIB, or IIIC with routine healing
		S72.026H	Nondisplaced fracture of epiphysis (separation) (upper) of unspecified femur, subsequent encounter for open fracture type I or II with delayed healing
		S72.026J	Nondisplaced fracture of epiphysis (separation) (upper) of unspecified femur, subsequent encounter for open fracture type IIIA, IIIB, or IIIC with delayed healing
		S72.026M	Nondisplaced fracture of epiphysis (separation) (upper) of unspecified femur, subsequent encounter for open fracture type I or II with nonunion
		S72.026N	Nondisplaced fracture of epiphysis (separation) (upper) of unspecified femur, subsequent encounter for open fracture type IIIA, IIIB, or IIIC with nonunion
		S72.026Q	Nondisplaced fracture of epiphysis (separation) (upper) of unspecified femur, subsequent encounter for open fracture type I or II with malunion

(continued)

Table 2-4. Preliminary List of Conditions for Defining Potentially Preventable Hospital Readmissions for Within-PAC Stay with ICD-10 Codes (continued)

Conditions	Subconditions	ICD-10-CM	ICD-10 Description
		S72.026R	Nondisplaced fracture of epiphysis (separation) (upper) of unspecified femur, subsequent encounter for open fracture type IIIA, IIIB, or IIIC with malunion
		S72.031B	Displaced midcervical fracture of right femur, initial encounter for open fracture type I or II
		S72.031C	Displaced midcervical fracture of right femur, initial encounter for open fracture type IIIA, IIIB, or IIIC
		S72.031E	Displaced midcervical fracture of right femur, subsequent encounter for open fracture type I or II with routine healing
		S72.031F	Displaced midcervical fracture of right femur, subsequent encounter for open fracture type IIIA, IIIB, or IIIC with routine healing
		S72.031H	Displaced midcervical fracture of right femur, subsequent encounter for open fracture type I or II with delayed healing
		S72.031J	Displaced midcervical fracture of right femur, subsequent encounter for open fracture type IIIA, IIIB, or IIIC with delayed healing
		S72.031M	Displaced midcervical fracture of right femur, subsequent encounter for open fracture type I or II with nonunion
		S72.031N	Displaced midcervical fracture of right femur, subsequent encounter for open fracture type IIIA, IIIB, or IIIC with nonunion
		S72.031Q	Displaced midcervical fracture of right femur, subsequent encounter for open fracture type I or II with malunion
		S72.031R	Displaced midcervical fracture of right femur, subsequent encounter for open fracture type IIIA, IIIB, or IIIC with malunion

Conditions	Subconditions	ICD-10-CM	ICD-10 Description
		S72.123Q	Displaced fracture of lesser trochanter of unspecified femur, subsequent encounter for open fracture type I or II with malunion
		S72.123R	Displaced fracture of lesser trochanter of unspecified femur, subsequent encounter for open fracture type IIIA, IIIB, or IIIC with malunion
		S72.124B	Nondisplaced fracture of lesser trochanter of right femur, initial encounter for open fracture type I or II
		S72.124C	Nondisplaced fracture of lesser trochanter of right femur, initial encounter for open fracture type IIIA, IIIB, or IIIC
		S72.124E	Nondisplaced fracture of lesser trochanter of right femur, subsequent encounter for open fracture type I or II with routine healing
		S72.124F	Nondisplaced fracture of lesser trochanter of right femur, subsequent encounter for open fracture type IIIA, IIIB, or IIIC with routine healing
		S72.124H	Nondisplaced fracture of lesser trochanter of right femur, subsequent encounter for open fracture type I or II with delayed healing
		S72.124J	Nondisplaced fracture of lesser trochanter of right femur, subsequent encounter for open fracture type IIIA, IIIB, or IIIC with delayed healing
		S72.124M	Nondisplaced fracture of lesser trochanter of right femur, subsequent encounter for open fracture type I or II with nonunion
		S72.124N	Nondisplaced fracture of lesser trochanter of right femur, subsequent encounter for open fracture type IIIA, IIIB, or IIIC with nonunion
		S72.124Q	Nondisplaced fracture of lesser trochanter of right femur, subsequent encounter for open fracture type I or II with malunion

		S82.92XJ	Unspecified fracture of left lower leg, subsequent encounter for open fracture type IIIA, IIIB, or IIIC with delayed healing
		S82.92XK	Unspecified fracture of left lower leg, subsequent encounter for closed fracture with nonunion
		S82.92XM	Unspecified fracture of left lower leg, subsequent encounter for open fracture type I or II with nonunion
		S82.92XN	Unspecified fracture of left lower leg, subsequent encounter for open fracture type IIIA, IIIB, or IIIC with nonunion

(continued)

Table 2-4. Preliminary List of Conditions for Defining Potentially Preventable Hospital Readmissions for Within-PAC Stay with ICD-10 Codes (continued)

Conditions	Subconditions	ICD-10-CM	ICD-10 Description
		S82.92XP	Unspecified fracture of left lower leg, subsequent encounter for closed fracture with malunion
		S82.92XQ	Unspecified fracture of left lower leg, subsequent encounter for open fracture type I or II with malunion
		S82.92XR	Unspecified fracture of left lower leg, subsequent encounter for open fracture type IIIA, IIIB, or IIIC with malunion
		S82.92XS	Unspecified fracture of left lower leg, sequela
	Fracture of calcaneus, closed	S92.001A	Unspecified fracture of right calcaneus, initial encounter for closed fracture
		S92.002A	Unspecified fracture of left calcaneus, initial encounter for closed fracture
		S92.009A	Unspecified fracture of unspecified calcaneus, initial encounter for closed fracture
		S92.011A	Displaced fracture of body of right calcaneus, initial encounter for closed fracture
		S92.012A	Displaced fracture of body of left calcaneus, initial encounter for closed fracture
		S92.013A	Displaced fracture of body of unspecified calcaneus, initial encounter for closed fracture
		S92.014A	Nondisplaced fracture of body of right calcaneus, initial encounter for closed fracture
		S92.015A	Nondisplaced fracture of body of left calcaneus, initial encounter for closed fracture
		S92.016A	Nondisplaced fracture of body of unspecified calcaneus, initial encounter for closed fracture
		S92.021A	Displaced fracture of anterior process of right calcaneus, initial encounter for closed fracture

(continued)

Table 2-4. Preliminary List of Conditions for Defining Potentially Preventable Hospital Readmissions for Within-PAC Stay with ICD-10 Codes (continued)

Conditions	Subconditions	ICD-10-CM	ICD-10 Description
		S92.022A	Displaced fracture of anterior process of left calcaneus, initial encounter for closed fracture
		S92.023A	Displaced fracture of anterior process of unspecified calcaneus, initial encounter for closed fracture
		S92.024A	Nondisplaced fracture of anterior process of right calcaneus, initial encounter for closed fracture
		S92.025A	Nondisplaced fracture of anterior process of left calcaneus, initial encounter for closed fracture
		S92.026A	Nondisplaced fracture of anterior process of unspecified calcaneus, initial encounter for closed fracture
		S92.031A	Displaced avulsion fracture of tuberosity of right calcaneus, initial encounter for closed fracture
		S92.032A	Displaced avulsion fracture of tuberosity of left calcaneus, initial encounter for closed fracture
		S92.033A	Displaced avulsion fracture of tuberosity of unspecified calcaneus, initial encounter for closed fracture
		S92.034A	Nondisplaced avulsion fracture of tuberosity of right calcaneus, initial encounter for closed fracture
		S92.035A	Nondisplaced avulsion fracture of tuberosity of left calcaneus, initial encounter for closed fracture
		S92.036A	Nondisplaced avulsion fracture of tuberosity of unspecified calcaneus, initial encounter for closed fracture
		S92.041A	Displaced other fracture of tuberosity of right calcaneus, initial encounter for closed fracture
		S92.042A	Displaced other fracture of tuberosity of left calcaneus, initial encounter for closed fracture
		S92.043A	Displaced other fracture of tuberosity of unspecified calcaneus, initial encounter for closed fracture

SOURCE: List of potentially preventable readmission conditions from RTI International with ICD-10-CM (version: April 2016).

NOTES: [###] indicates CCS code; *AHRQ PQI ICD-10 v5 specifications

(continued)

Table 2-4. Preliminary List of Conditions for Defining Potentially Preventable Hospital Readmissions for Within-PAC Stay with ICD-10 Codes (continued)

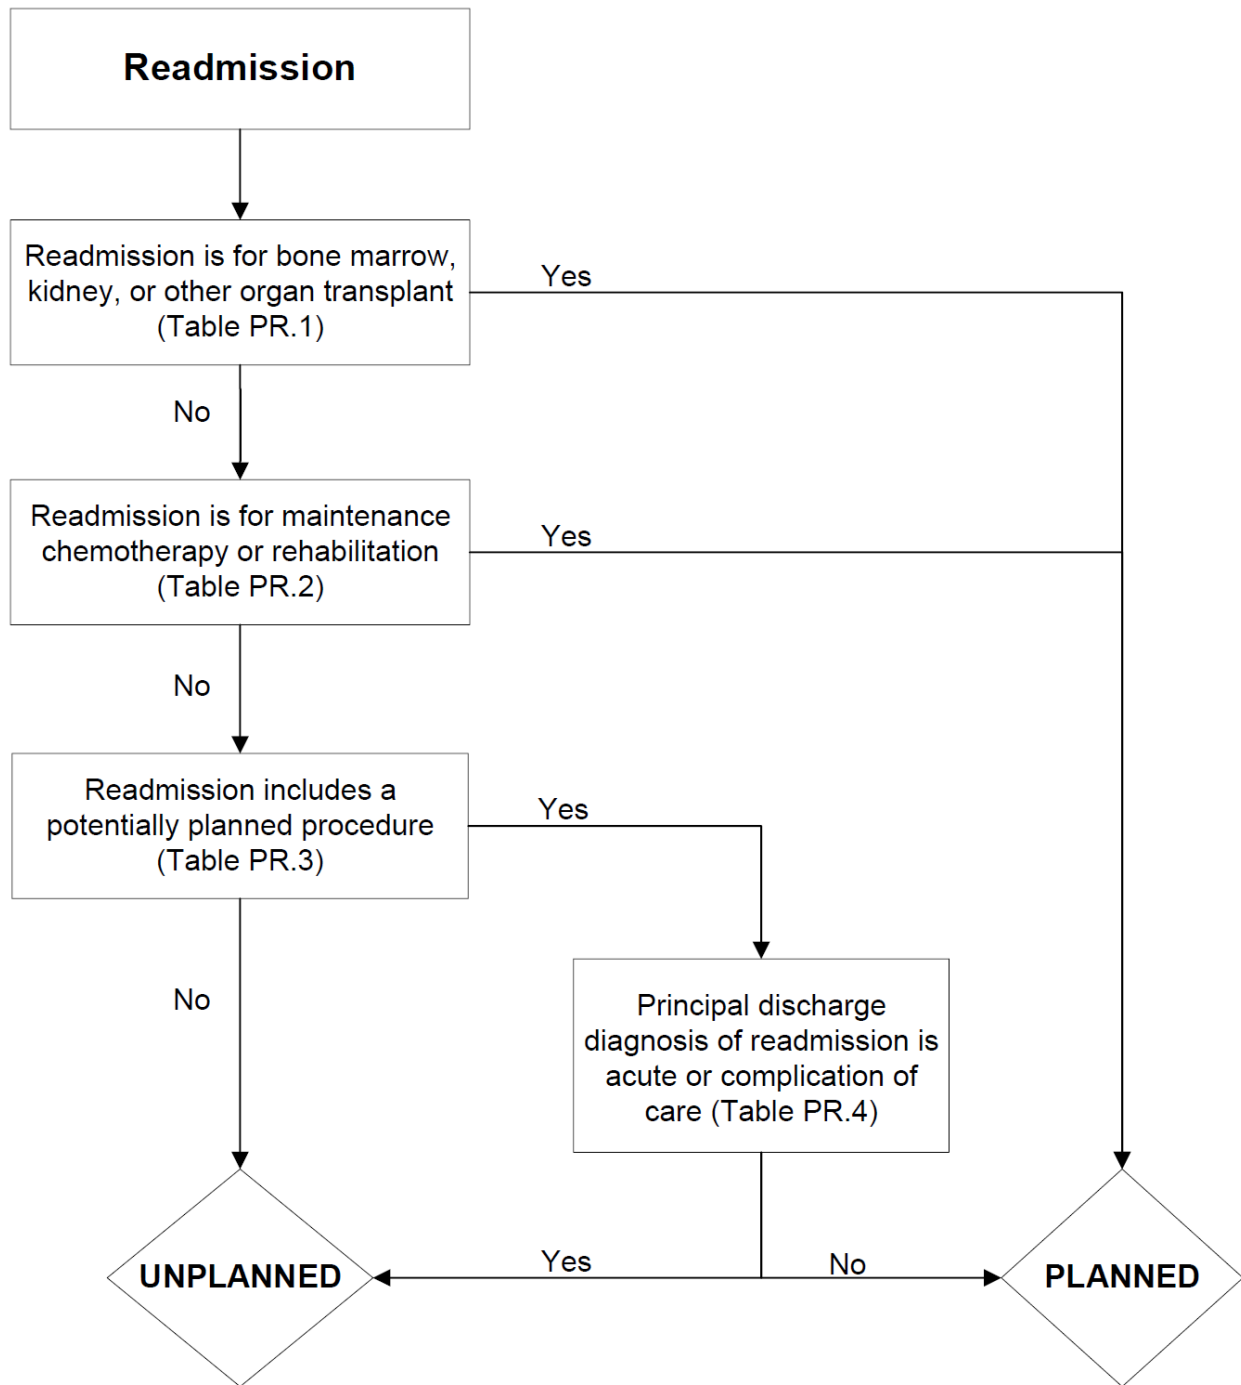

To be considered a potentially preventable readmission, diagnosis codes must be the principal diagnosis on the readmission claim, except where noted.

^Principal of acute bronchitis AND secondary of subcondition COPD

~principal ICD-10-CM code with secondary ICD-10-CM code for subcondition dehydration

Source: 2015 Version of the HWR Planned Readmission Algorithm

Planned Readmission Algorithm Version 3.0 Tables – Hospital Wide Readmission Measure

Table 2-5. Procedure Categories that are Always Planned (Version 3.0)*

Procedure CCS	Description
64	Bone marrow transplant
105	Kidney transplant
134	Cesarean section**
135	Forceps; vacuum; and breech delivery ^{††}
176	Other organ transplantation

*Corresponds to Table PR. 1, referenced in Figure 2-1

Table 2-6. Diagnosis Categories that are Always Planned (Version 3.0)*

Diagnosis CCS	Description
45	Maintenance chemotherapy
194	Forceps delivery ^{‡‡}
196	Normal pregnancy and/or delivery ^{§§}
254	Rehabilitation

*Corresponds to Table PR. 2, referenced in Figure 2-1

Table 2-7. Potentially Planned Procedure Categories (Version 3.0)*

Procedure CCS	Description
3	Laminectomy; excision intervertebral disc
5	Insertion of catheter or spinal stimulator and injection into spinal
9	Other OR therapeutic nervous system procedures
10	Thyroidectomy; partial or complete
12	Other therapeutic endocrine procedures
33	Other OR therapeutic procedures on nose; mouth and pharynx
36	Lobectomy or pneumonectomy
38	Other diagnostic procedures on lung and bronchus
40	Other diagnostic procedures of respiratory tract and mediastinum
43	Heart valve procedures

(continued)

Table 2-7. Potentially Planned Procedure Categories (Version 3.0) (continued)

Procedure CCS	Description
44	Coronary artery bypass graft (CABG)
45	Percutaneous transluminal coronary angioplasty (PTCA)
47	Diagnostic cardiac catheterization; coronary arteriography
48	Insertion; revision; replacement; removal of cardiac pacemaker or cardioverter/defibrillator
49	Other OR heart procedures
51	Endarterectomy; vessel of head and neck
52	Aortic resection; replacement or anastomosis
53	Varicose vein stripping; lower limb
55	Peripheral vascular bypass
56	Other vascular bypass and shunt; not heart
59	Other OR procedures on vessels of head and neck
62	Other diagnostic cardiovascular procedures
66	Procedures on spleen
67	Other therapeutic procedures; hemic and lymphatic system
74	Gastrectomy; partial and total
78	Colorectal resection
79	Local excision of large intestine lesion (not endoscopic)
84	Cholecystectomy and common duct exploration
85	Inguinal and femoral hernia repair
86	Other hernia repair
99	Other OR gastrointestinal therapeutic procedures
104	Nephrectomy; partial or complete
106	Genitourinary incontinence procedures
107	Extracorporeal lithotripsy; urinary
109	Procedures on the urethra
112	Other OR therapeutic procedures of urinary tract
113	Transurethral resection of prostate (TURP)
114	Open prostatectomy

(continued)

Table 2-7. Potentially Planned Procedure Categories (Version 3.0) (continued)

Procedure CCS	Description
119	Oophorectomy; unilateral and bilateral
120	Other operations on ovary
124	Hysterectomy; abdominal and vaginal
129	Repair of cystocele and rectocele; obliteration of vaginal vault
132	Other OR therapeutic procedures; female organs
142	Partial excision bone
152	Arthroplasty knee
153	Hip replacement; total and partial
154	Arthroplasty other than hip or knee
157	Amputation of lower extremity
158	Spinal fusion
159	Other diagnostic procedures on musculoskeletal system
166	Lumpectomy; quadrantectomy of breast
167	Mastectomy
169	Debridement of wound; infection or burn
170	Excision of skin lesion
172	Skin graft
ICD-9 Codes	Description
30.1, 30.29, 30.3, 30.4, 31.74, 34.6	Laryngectomy, revision of tracheostomy, scarification of pleura (from Proc CCS 42- Other OR Rx procedures on respiratory system and mediastinum)
38.18	Endarterectomy leg vessel (from Proc CCS 60- Embolectomy and endarterectomy of lower limbs)
55.03, 55.04	Percutaneous nephrostomy with and without fragmentation (from Proc CCS 103- Nephrotomy and nephrostomy)
94.26, 94.27	Electroshock therapy (from Proc CCS 218- Psychological and psychiatric evaluation and therapy)

*Corresponds to Table PR. 3, referenced in Figure 2-1

Table 2-8. Acute Diagnosis Categories (Version 3.0)*

Diagnosis CCS	Description
1	Tuberculosis
2	Septicemia (except in labor)
3	Bacterial infection; unspecified site
4	Mycoses
5	HIV infection
7	Viral infection
8	Other infections; including parasitic
9	Sexually transmitted infections (not HIV or hepatitis)
54	Gout and other crystal arthropathies
55	Fluid and electrolyte disorders
60	Acute posthemorrhagic anemia
61	Sickle cell anemia
63	Diseases of white blood cells
76	Meningitis (except that caused by tuberculosis or sexually transmitted disease)
77	Encephalitis (except that caused by tuberculosis or sexually transmitted disease)
78	Other CNS infection and poliomyelitis
82	Paralysis
83	Epilepsy; convulsions
84	Headache; including migraine
85	Coma; stupor; and brain damage
87	Retinal detachments; defects; vascular occlusion; and retinopathy
89	Blindness and vision defects
90	Inflammation; infection of eye (except that caused by tuberculosis or sexually transmitted disease)
91	Other eye disorders
92	Otitis media and related conditions
93	Conditions associated with dizziness or vertigo
99	Hypertension with complications

(continued)

Table 2-8. Acute Diagnosis Categories (Version 3.0) (continued)

Diagnosis CCS	Description
100	Acute myocardial infarction (with the exception of ICD-9 codes 410.x2)
102	Nonspecific chest pain
104	Other and ill-defined heart disease
107	Cardiac arrest and ventricular fibrillation
109	Acute cerebrovascular disease
112	Transient cerebral ischemia
116	Aortic and peripheral arterial embolism or thrombosis
118	Phlebitis; thrombophlebitis and thromboembolism
120	Hemorrhoids
122	Pneumonia (except that caused by TB or sexually transmitted disease)
123	Influenza
124	Acute and chronic tonsillitis
125	Acute bronchitis
126	Other upper respiratory infections
127	Chronic obstructive pulmonary disease and bronchiectasis
128	Asthma
129	Aspiration pneumonitis; food/vomitus
130	Pleurisy; pneumothorax; pulmonary collapse
131	Respiratory failure; insufficiency; arrest (adult)
135	Intestinal infection
137	Diseases of mouth; excluding dental
139	Gastroduodenal ulcer (except hemorrhage)
140	Gastritis and duodenitis
142	Appendicitis and other appendiceal conditions
145	Intestinal obstruction without hernia
146	Diverticulosis and diverticulitis
148	Peritonitis and intestinal abscess
153	Gastrointestinal hemorrhage
154	Noninfectious gastroenteritis

(continued)

Table 2-8. Acute Diagnosis Categories (Version 3.0) (continued)

Diagnosis CCS	Description
157	Acute and unspecified renal failure
159	Urinary tract infections
165	Inflammatory conditions of male genital organs
168	Inflammatory diseases of female pelvic organs
172	Ovarian cyst
197	Skin and subcutaneous tissue infections
198	Other inflammatory condition of skin
225	Joint disorders and dislocations; trauma-related
226	Fracture of neck of femur (hip)
227	Spinal cord injury
228	Skull and face fractures
229	Fracture of upper limb
230	Fracture of lower limb
232	Sprains and strains
233	Intracranial injury
234	Crushing injury or internal injury
235	Open wounds of head; neck; and trunk
237	Complication of device; implant or graft
238	Complications of surgical procedures or medical care
239	Superficial injury; contusion
240	Burns
241	Poisoning by psychotropic agents
242	Poisoning by other medications and drugs
243	Poisoning by nonmedicinal substances
244	Other injuries and conditions due to external causes
245	Syncope
246	Fever of unknown origin
247	Lymphadenitis
249	Shock

(continued)

Table 2-8. Acute Diagnosis Categories (Version 3.0) (continued)

Diagnosis CCS	Description
250	Nausea and vomiting
251	Abdominal pain
252	Malaise and fatigue
253	Allergic reactions
259	Residual codes; unclassified
650	Adjustment disorders
651	Anxiety disorders
652	Attention-deficit, conduct, and disruptive behavior disorders
653	Delirium, dementia, and amnestic and other cognitive disorders
656	Impulse control disorders, NEC
658	Personality disorders
660	Alcohol-related disorders
661	Substance-related disorders
662	Suicide and intentional self-inflicted injury
663	Screening and history of mental health and substance abuse codes
670	Miscellaneous disorders
ICD-9 Codes	Description
Acute ICD-9 codes within Dx CCS 97: Peri-; endo-; and myocarditis; cardiomyopathy	
03282	Diphtheritic myocarditis
03640	Meningococcal carditis nos
03641	Meningococcal pericarditis
03642	Meningococcal endocarditis
03643	Meningococcal myocarditis
07420	Coxsackie carditis nos
07421	Coxsackie pericarditis
07422	Coxsackie endocarditis
07423	Coxsackie myocarditis
11281	Candidal endocarditis
11503	Histoplasma capsulatum pericarditis

(continued)

Table 2-8. Acute Diagnosis Categories (Version 3.0) (continued)

Diagnosis CCS	Description
11504	Histoplasma capsulatum endocarditis
11513	Histoplasma duboisii pericarditis
11514	Histoplasma duboisii endocarditis
11593	Histoplasmosis pericarditis
11594	Histoplasmosis endocarditis
1303	Toxoplasma myocarditis
3910	Acute rheumatic pericarditis
3911	Acute rheumatic endocarditis
3912	Acute rheumatic myocarditis
3918	Acute rheumatic heart disease nec
3919	Acute rheumatic heart disease nos
3920	Rheumatic chorea w heart involvement
3980	Rheumatic myocarditis
39890	Rheumatic heart disease nos
39899	Rheumatic heart disease nec
4200	Acute pericarditis in other disease
42090	Acute pericarditis nos
42091	Acute idiopath pericarditis
42099	Acute pericarditis nec
4210	Acute/subacute bacterial endocarditis
4211	Acute endocarditis in other diseases
4219	Acute/subacute endocarditis nos
4220	Acute myocarditis in other diseases
42290	Acute myocarditis nos
42291	Idiopathic myocarditis
42292	Septic myocarditis
42293	Toxic myocarditis
42299	Acute myocarditis nec
4230	Hemopericardium

(continued)

Table 2-8. Acute Diagnosis Categories (Version 3.0) (continued)

Diagnosis CCS	Description
4231	Adhesive pericarditis
4232	Constrictive pericarditis
4233	Cardiac tamponade
4290	Myocarditis nos
Acute ICD-9 codes within Dx CCS 105: Conduction disorders	
4260	Atrioventricular
42610	Atrioventricular block nos
42611	Atrioventricular block-1st degree
42612	Atrioventricular block-mobitz ii
42613	Atrioventricular block-2nd degree nec
4262	Left bundle branch hemiblock
4263	Left bundle branch block nec
4264	Right bundle branch block
42650	Bundle branch block nos
42651	Right bundle branch block/left posterior fascicular block
42652	Right bundle branch block/left ant fascicular block
42653	Bilateral bundle branch block nec
42654	Trifascicular block
4266	Other heart block
4267	Anomalous atrioventricular excitation
42681	Lown-ganong-levine syndrome
42682	Long qt syn
4269	Conduction
Acute ICD-9 codes within Dx CCS 106: Dysrhythmia	
4272	Paroxysmal tachycardia nos
7850	Tachycardia nos
42789	Cardiac dysrhythmias nec
4279	Cardiac dysrhythmia noc
42769	Premature beats nec

Table 2-8. Acute Diagnosis Categories (Version 3.0) (continued)

Diagnosis CCS	Description
Acute ICD-9 codes within Dx CCS 108: Congestive heart failure; nonhypertensive	
39891	Rheumatic heart failure
4280	Congestive heart failure
4281	Left heart failure
42820	Unspecified systolic heart failure
42821	Acute systolic heart failure
42823	Acute on chronic systolic heart failure
42830	Unspecified diastolic heart failure
42831	Acute diastolic heart failure
42833	Acute on chronic diastolic heart failure
42840	Unspec combined syst & dias heart failure
42841	Acute combined systolic & diastolic heart failure
42843	Acute on chronic combined systolic & diastolic heart failure
4289	Heart failure nos
Acute ICD-9 codes within Dx CCS 149: Biliary tract disease	
5740	Calculus of gallbladder with acute cholecystitis
57400	Calculus of gallbladder with acute cholecystitis without mention of obstruction
57401	Calculus of gallbladder with acute cholecystitis with obstruction
5743	Calculus of bile duct with acute cholecystitis
57430	Calculus of bile duct with acute cholecystitis without mention of obstruction
57431	Calculus of bile duct with acute cholecystitis with obstruction
5746	Calculus of gallbladder and bile duct with acute cholecystitis
57460	Calculus of gallbladder with acute cholecystitis without mention of obstruction
57461	Calculus of gallbladder and bile duct with acute cholecystitis with obstruction
5748	Calculus of gallbladder and bile duct with acute and chronic cholecystitis
57480	Calculus of gallbladder obstruction and bile duct with acute and chronic cholecystitis without mention of obstruction

(continued)

Table 2-8. Acute Diagnosis Categories (Version 3.0) (continued)

Diagnosis CCS	Description
57481	Calculus of gallbladder and bile duct with acute and chronic cholecystitis with obstruction
5750	Acute cholecystitis
57512	Acute and chronic cholecystitis
5761	Cholangitis
Acute ICD-9 codes with Dx CCS 152: Pancreatic disorders	
5770	Acute pancreatitis

*Corresponds to Table PR. 4, referenced in Figure 2-1

Source: 2015 Version of the HWR Planned Readmission Algorithm

Table 2-9. AHRQ CCS Single Level Procedure Codes and ICD-9 Procedure Codes Added to Yale’s Planned Readmission Algorithm, for the Post-Acute Care Setting

AHRQ CCS Single Level Procedures Codes	Description	Comment
37	Diagnostic Bronchoscopy and Biopsy of Bronchus	
71	Gastrostomy: temporary and permanent	
82	Endoscopic retrograde cannulation of pancreases (ERCP)	
87	Laparoscopy (GI only)	
89	Exploratory Laparotomy	
160	Other therapeutic procedure on muscles and tendons	
164	Other OR therapeutic procedures on musculoskeletal system	
171	Suture of skin and subcutaneous tissue ICD-9	

ICD-9 Procedure Codes	Description	Comment
<u>Topic: Amputation of Lower Extremity</u>		
83.82	Graft of muscle or fascia	
86.87	Fat graft of skin and subcutaneous tissue	Required, Diagnosis V58.41, encounter for planned postoperative wound closure
<u>Topic: Amputation of Upper Extremity</u>		
84.1	Upper limb amputation, not otherwise specified	
84.2	Amputation and disarticulation of finger	
84.3	Amputation and disarticulation of thumb	
84.4	Amputation through hand	
84.5	Disarticulation of wrist	

(continued)

Table 2-9. AHRQ CCS Single Level Procedure Codes and ICD-9 Procedure Codes Added to Yale’s Planned Readmission Algorithm, for the Post-Acute Care Setting (continued)

ICD-9 Procedure Codes	Description	Comment
84.6	Amputation through forearm	
84.7	Disarticulation of elbow	
84.8	Amputation through humerus	
84.9	Disarticulation of shoulder	
84.10	Interthoracoscapular amputation	
<u>Topic: Removal of Vascular Obstruction, Non-Coronary</u>		
38.18	Endarterectomy, lower limb vessels	
38.08	Embolectomy, lower limb arteries	
39.50	Angioplasty or atherectomy of other non- coronary vessels	
00.55	Insertion of drug-eluting stent(s) of other peripheral vessel(s)	
00.60	Insertion of drug-eluting stent(s) of superficial femoral artery	
39.90	Insertion of non-drug-eluting peripheral (non-coronary) vessel stent(s)	
<u>Topic: Colon and Rectal Procedures, Selected</u>		
46.85	Dilation of intestine (includes endoscopic approach)	
96.8	Insertion of naso-intestinal tube (includes for decompression)	
96.9	Insertion of rectal tube	
46.50	Closure of intestinal stoma, not otherwise specified	Required, Diagnosis code V55.2, attention to ileostomy, and V55.3, attention to colostomy

(continued)

Table 2-9. AHRQ CCS Single Level Procedure Codes and ICD-9 Procedure Codes Added to Yale’s Planned Readmission Algorithm, for the Post-Acute Care Setting (continued)

ICD-9 Procedure Codes	Description	Comment
46.51	Closure of stoma of small intestine	Required, Diagnosis code V55.2, attention to ileostomy, and V55.3, attention to colostomy
46.52	Closure of stoma of large intestine	Required, Diagnosis code V55.2, attention to ileostomy, and V55.3, attention to colostomy
46.86	Endoscopic insertion of colonic stent(s)	
46.87	Other insertion of colonic stent (s)	
<u>Topic: Insertion of Feeding Tubes</u>		
44.39	Other gastroenterostomy (GJ-tube)	
46.39	Other enterostomy (J-tube)	
<u>Topic: Routine Device Replacement</u>		
86.06	Insertion of totally implanted infusion pump	
<u>Topic: Routine Removal of Devices</u>		
84.57	Removal of (cement) spacer (includes antibiotic impregnated spacer)	
97.41	Removal of thoracotomy tube or pleural cavity drain (non-incisional)	
02.43	Removal of ventricular shunt	
97.37	Removal of tracheostomy tube (non-incisional)	
01.27	removal of catheter(s) from cranial cavity or tissue	
86.05	Incision with removal of foreign body or device from skin and subcutaneous tissue	
02.95	Removal of skull tongs or halo traction device	
78.60-78.69	Removal of implanted devices from bone (includes internal and external fixation)	

(continued)

Table 2-9. AHRQ CCS Single Level Procedure Codes and ICD-9 Procedure Codes Added to Yale's Planned Readmission Algorithm, for the Post-Acute Care Setting (continued)

ICD-9 Procedure Codes	Description	Comment
80.00-80.09	Orthopedic implants arthrotomy for removal of prosthesis without replacement	
<u>Topic: Pleurosclerosis</u>		
34.6	Scarification of pleura	
34.92	Injection into thoracic cavity	
<u>Topic: Colon and Rectal Procedures, Selected</u>		
51.14	Other close (endoscopic) biopsy of biliary duct or sphincter of Oddi	
51.64	Endoscopic excision or destruction of lesion of biliary ducts or sphincter of Oddi	
51.84	Endoscopic dilation of ampulla and biliary duct	This code became available in CY 2010
51.84	Endoscopic sphincterotomy and papillotomy	
51.85	Endoscopic insertion of nasobiliary drainage tube	
51.86	Endoscopic insertion of stent (tube) into bile duct	
51.87	Endoscopic removal of stone(s) from biliary tract	
<u>Topic: Fistula</u>		
42.84	Repair of esophageal fistula, not elsewhere classified	
44.63	Closure of other gastric fistula (include gastrocolic, gastrojejunal fistula)	
46.72	Closure of fistula of duodenum	
46.74	Closure of fistula of small intestine, except duodenum (includes enterocutaneous)	
46.76	Closure of fistula of large intestine	
47.92	Closure of appendiceal fistula	
48.73	Closure of other rectal fistula	
48.93	Repair of perirectal fistula	
49.11	<u>Anal fistulotomy</u>	

(continued)

Table 2-9. AHRQ CCS Single Level Procedure Codes and ICD-9 Procedure Codes Added to Yale’s Planned Readmission Algorithm, for the Post-Acute Care Setting (continued)

ICD-9 Procedure Codes	Description	Comment
49.12	Anal fistulectomy	
49.73	Closure of anal fistula	
19.9	Other repair of middle ear (includes closure of mastoid fistula)	
20.93	Repair of oval and round windows (includes closure of fistula)	
21.82	Closure of nasal fistula	
31.62	Closure of fistula of larynx (includes laryngotracheal)	
31.73	Closure of other fistula of trachea (includes tracheoesophageal)	
33.42	Closure of bronchial fistula (includes bronchocutaneous, bronchoesophageal, bronchovisceral)	
34.73	Closure of other fistula of thorax (includes bronchopleural, bronchopleurocutaneous, bronchopleuromediastinal)	
34.83	Closure of fistula of diaphragm (includes thoracoabdominal, thoracogastric, thoracointestinal)	
34.93	Repair of pleura (includes closure of unspecified pleural fistula)	
61.42	Repair of scrotal fistula	
<u>Topic: Tendon Repair (eye)</u>		
15.7	Repair of injury of extraocular muscle (includes repair of tendon)	
<u>Topic: Aneurysm</u>		
39.51	Clipping of aneurysm	

NOTE: December, 2012 Yale added several additional AHRQ CCS Single-Level Procedure Codes. Two of these codes 169 (Debridement of wound; infection or burn) and 172 (Skin graft) had been on the prior RTI developed list.

Preliminary Testing Results for the IRF Setting
