Shared Decision Making Model ACO Applicant Guidance
Beneficiary Fee-For-Service Preference-Sensitive Condition Visits

Purpose:

The Shared Decision Making model application, *ACO Organizational Profile: Question 9,* requires the ACO to input Medicare fee-for-service (FFS) beneficiary visits with a preference-sensitive condition (PSC) by practice type. This document provides guidance to ACOs for how to identify these visits and serves as a starting point for the ACOs by offering ICD-9/10 codes that may be used to complete this section of the application.

Guidance:

The application provides a table with data fields for ACO practice Medicare FFS visits by practice type: primary adult care, oncology, radiology, urology, orthopedics, and 'other' specialty types. Beneficiary visits that occurred in CY2015 for any of the PSCs eligible for SDM: stable ischemic heart disease, osteoarthritis of the hip or knee, back pain (herniated disc or spinal stenosis), localized prostate cancer, and benign prostate hyperplasia should be included in the table count (see Figure 1). The 'other' specialty type fields should be used for cardiology, neurology, rheumatology, and any other practice types included in the ACO that have FFS beneficiary PSC visits. Please identify each additional specialty type by name and include the respective number of FFS visits with PSCs.

FIGURE 1. SDM APPLICATION: ACO ORGANIZATIONAL PROFILE QUESTION 9

Counting FFS PSC Visits:

ACOs may arrive at counts for FFS PSC visits using ICD-9/10 diagnosis codes and HCPCS procedure codes. Both ICD-9/10 codes are appropriate for use, where applicable to a given PSC, as the ICD-9 codes were in effect until October 1, 2015 when the ICD-10 codes were implemented. To the degree possible, the approach for identifying FFS PSC visits should be consistently applied for all practices and practitioners. The FFS PSC visit tallies should be provided at the ACO aggregate level for the medical specialties listed in the reporting table.

The guidance and codes provided below are not precise, and are intended to simply serve as a common starting point for ACOs to reasonably report estimated numbers of FFS PSC beneficiary visits in the application.

Stable Ischemic Heart Disease

ICD-9/10 codes may be used to identify and count beneficiary FFS visits with a principal diagnosis consistent with <u>stable</u> coronary artery disease (CAD), such as coronary atherosclerosis or ischemic heart disease during the year, and to **exclude** those who had a revascularization procedure within two years of the reference period, a diagnosis of prinzmetal angina, or a diagnosis of unstable disease (such as infarction or total occlusion) during the previous two years. Please see Appendix for the ICD-9/10 codes.

The following HCPCS codes may be used to identify revascularization procedures:

35452	TRANSLUMINAL BALLOON ANGIOPLASTY, OPEN; AORTIC
35472	TRANSLUMINAL BALLOON ANGIOPLASTY, PERCUTANEOUS; AORTIC
92982	PERCUTANEOUS TRANSLUMINAL CORONARY BALLOON ANGIOPLASTY; SINGLE VESSEL
92984	PERCUTANEOUS TRANSLUMINAL CORONARY BALLOON ANGIOPLASTY; EACH ADD VESSEL
33510-33536	CORONARY ARTERY BYPASS

Low Back Pain/Herniated Disc/Spinal Stenosis

ICD-9/10 codes may be used to identify and count beneficiaries FFS visits with a diagnosis of low back pain, herniated disc or spinal stenosis. Please see Appendix for the ICD-9/10 codes.

Knee/Hip Osteoarthritis

ICD-9/10 codes may be used to identify and count beneficiary FFS visits with a diagnosis of knee and/or hip osteoarthritis. Please see Appendix for the ICD-9/10 codes.

Localized Prostate Cancer

ICD-9/10 codes are not offered to estimate beneficiary visit counts for this condition because clinical information, such as beneficiary cancer stage, is not detailed in the codes. ACOs may estimate the numbers of beneficiary FFS visits for early/localized prostate cancer using available methods such EHR data or other means to derive a reasonable estimate.

Benign Prostatic Hyperplasia

ICD-9/10 codes may be used to identify and count beneficiary FFS visits with benign prostatic hyperplasia. Please see Appendix for the listing of ICD-9/10 inclusion & exclusion codes.

Disclaimer: ICD-9 and HCPCS codes referenced in this document were originally used for a different purpose; to project the number of beneficiaries with the six PSCs using the 2012 Medicare claims data, and were later translated to FY2016 ICD-10-CM codes for use in this document.
