

Medicare Diabetes Prevention Program (MDPP)

Expanded Model Roles Fact Sheet

The MDPP expanded model aims to prevent the onset of type 2 diabetes among Medicare beneficiaries who have an indication of prediabetes. The MDPP expanded model is a CMS Innovation Center nationwide model test that builds on the National Diabetes Prevention Program (National DPP) led by the Centers for Disease Control and Prevention (CDC). CMS and CDC have distinct but complementary roles related to the MDPP expanded model.

CMS is implementing and evaluating the MDPP expanded model. In this role, CMS:

-  Defines the MDPP set of services and the MDPP services period covered under Medicare
-  Provides resources to support successful supplier enrollment and claims submission
-  Reviews and processes Medicare enrollment applications of organizations with qualifying recognition status (MDPP interim preliminary recognition or CDC preliminary recognition, when established, or CDC full recognition)
-  Provides resources to verify certain elements of beneficiary eligibility for MDPP
-  Processes claims submitted by MDPP suppliers for payment
-  Monitors MDPP suppliers' compliance with Medicare requirements, including the MDPP supplier standards

Organizations should contact **CMS** if they already have recognition and are interested in enrolling as a Medicare supplier, or if they have questions about MDPP services, Medicare enrollment, payment, or supplier standards.

CDC is overseeing and assuring the quality of the National DPP. In this role, CDC:

-  Develops and maintains the CDC National DPP Diabetes Prevention Recognition Program (DPRP) Standards
-  Evaluates organizations for achievement and ongoing maintenance of recognition status, per the current DPRP Standards
-  Maintains a national registry of recognized organizations, including those with MDPP preliminary or full recognition status granted by CDC
-  Provides resources to support organizations in achieving and maintaining CDC recognition
-  Reviews and approves alternative curricula submitted by organizations seeking recognition
-  Updates National DPP curricula as necessary based on current evidence

Organizations should contact **CDC** if they are interested in obtaining recognition, have questions about the DPP curriculum or evidence base, or are interested in learning more about best practices in DPP delivery.
