1. Background and General Information

Beginning in calendar year (CY) 2021, within the Value-Based Insurance Design (VBID) Model's Hospice Benefit Component, the Centers for Medicare & Medicaid Services (CMS) has been testing the impact on quality and program expenditures of incorporating the Medicare Part A hospice benefit into the Medicare Advantage (MA) program with the goal of creating a seamless continuum of care in the MA program for Part A and Part B services. In voluntarily participating in this Model component, MA Organizations (MAOs) are incorporating the Medicare hospice benefit into MA-covered services while offering comprehensive palliative care services outside the hospice benefit for enrollees with serious illness. In addition, participating MAOs are able to provide individualized, clinically appropriate transitional concurrent care services through innetwork providers and to offer hospice-specific supplemental benefits.

On March 1, 2022, CMS released for comment the CY 2023 preliminary payment rate actuarial methodology for the Hospice Benefit Component of the Model. No comments were submitted regarding the preliminary methodology and CMS is finalizing the CY 2023 hospice payment rate actuarial methodology consistent with the preliminary methodology.

The actuarial methodology for the Hospice Benefit Component of the Model reflects CMS' continued commitment to maintaining the full Medicare hospice benefit while providing MAOs with the flexibility to develop and implement innovative approaches to serious illness care. CMS expects that uptake of the Hospice Benefit Component will result in improvements in financial accountability and timely access to high-quality palliative and hospice care for Medicare beneficiaries, and the agency is looking forward to continuing to work with stakeholders to achieve the shared goals of transforming and improving serious illness care for those beneficiaries. Comments or questions regarding the payment rate actuarial methodology of the Hospice Benefit Component may be sent by email to <a href="https://www.wbsic.org/wbs.com/wbs.com/wbsic.org/wbs.com/wbs.com/wbs.com/wbs.com/wbs.com/wbs.com/wbs.com/wbs.com/wbs.com/wbs.com/wbs.com/wbs.com/wbs.com/wbs.com/wbs.com/wbs.com/wbs.com/wbs.com/wbs.com/wbs.com/wbs.com/wbs.com/wbs.com/wbs.com/wbs.com/wbs.com/wbs.com/wbs.com/wbs.com/wbs.com/wbs.com/wbs.com/wbs.com/wbs.com/wbs.com/wbs.com/wbs.com/wbs.com/wbs.com/wbs.com/wbs.com/wbs.com/wbs.com/wbs.com/wbs.com/wbs.com/wbs.com/wbs.com/wbs.com/wbs.com/wbs.com/wbs.com/wbs.com/wbs.com/wbs.com/wbs.com/wbs.com/wbs.com/wbs.com/wbs.com/wbs.com/wbs.com/wbs.com/wbs.com/wbs.com/wbs.com/wbs.com/wbs.com/wbs.com/wbs.com/wbs.com/wbs.com/wbs.com/wbs.com/wbs.com/wbs.com/wbs.com/wbs.com/wbs.com/wbs.com/wbs.com/wbs.com/wbs.com/wbs.com/wbs.com/wbs.com/wbs.com/wbs.com/wbs.com/wbs.com/wbs.com/wbs.com/wbs.com/wbs.com/wbs.com/wbs.com/wbs.com/wbs.com/wbs.com/wbs.com/wbs.com/wbs.com/wbs.com/wbs.com/wbs.com/wbs.com/wbs.com/wbs.com/wbs.com/wbs.com/wbs.com/wbs.com/wbs.com/wbs.com/wbs.com/wbs.com/wbs.com/wbs.com/wbs.com/wbs.com/wbs.com/wbs.com/wbs.com/wbs.com/wbs.com/wbs.com/wbs.com/wbs.com/wbs.com/wbs.com/wbs.com/wbs.com/wbs.com/wbs.com/wbs.com/wbs.com/wbs.com/wbs.com/wbs.com/wbs.com/wbs.com/wbs.com/wbs.com/wbs.com/wbs.com/wbs.com/wbs.com/wbs.com/wbs.com/wbs.com/wbs.com/w

1.1. Executive Summary of the CY 2023 Hospice Capitation Payment Rate Actuarial Methodology

This paper describes the actuarial methodology for the hospice capitation payment rate paid to MAOs that participate in the voluntary Hospice Benefit Component of the Model. Included in the document are the following: (i) a review of the key changes from the CY 2022 final methodology (section 1.2); (ii) the current payment structure of the fee-for-service (FFS) Medicare hospice benefit (section 1.3); and (iii) detailed technical specifications regarding payments made under the Hospice Benefit Component of the Model, including the rate determination process for the CY 2023 national monthly hospice capitation rate and applied rating factors (sections 2–4).

Payment Structure of the Hospice Benefit Component

Participating MAOs will be paid in accordance with current law for their enrollees who do not elect hospice. For their enrollees who elect hospice under 42 CFR 418.24, participating MAOs will be paid per the following payment structure:

- For the first month of hospice election ("Month 1"), the basic benefit capitation rate (also known as the "A/B capitation rate") will be paid only if, as of the first of the month, an enrollee is not under hospice election status consistent with 42 CFR 422.320(c).
- For all calendar months in which an enrollee elects hospice care, including the first month of hospice election, a participating MAO will receive the following:
 - o A monthly hospice capitation rate;
 - Oconsistent with 42 CFR 422.320(c)(2), the beneficiary rebate amount as described in 42 CFR 422.304(a); and
 - o Consistent with 42 CFR 422.320(c), the monthly prescription drug payment as described in 42 CFR 423.315 (if any).

Hospice Capitation Rate Development

For CY 2023, CMS developed two national monthly hospice capitation rates and corresponding sets of payment rates. The development of the first national monthly hospice rate and corresponding set of payment rates includes hospice stays that begin in each of the base calendar years used in the tabulations. These tabulations mimic the first year Model experience that MAOs with Plan Benefit Packages (PBPs) that offer the Hospice Benefit Component for the first time in CY 2023 will encounter in CY 2023—that is, the impact of not having carryover hospice stays from prior years. In essence, hospice stays that spanned calendar years are excluded to align the base data with the expected rating period duration. These values and rates will be referred to in this document as "year-1 rates."

The development of the second national monthly hospice rate and corresponding set of payment rates includes hospice stays that begin in each of the base experience calendar years or in prior years. These tabulations mimic the second and third year Model experience that MAOs with PBPs that offer the Hospice Benefit Component in CY 2022 and CY 2023 will encounter in CY 2023. These values and rates will be referred to as "mature-year rates."

Unless specified otherwise, the narrative and data contained in this report pertain to the year-1 rates, and references to years pertain to calendar, not fiscal, years.

The determination process for the CY 2023 rates¹ is described in section 2. These rates reflect FFS-paid hospice experience for care associated with the terminal condition and related conditions during a hospice stay ("hospice FFS payments") and FFS-paid non-hospice experience ("non-hospice FFS payments"). The latter experience consists of two parts: (i) FFS-paid non-hospice care furnished by non-hospice providers during a hospice stay; and (ii) other FFS-paid non-hospice care provided after a hospice stay ends (including, in the event of a live discharge, non-hospice care provided on the last day of the stay and through the end of the calendar month that the stay ends) for all Medicare beneficiaries who elected hospice (both those enrolled in Original Medicare and those enrolled in the MA program).

¹ These rates represent actual hospice FFS payments for hospice care and services; the term "hospice stay" refers to the overall period between an election and discharge, which may include multiple 90-day or 60-day periods.

CMS followed a standard rate development process, which consisted of three parts: (i) as described in section 2.3, base data appropriate to the population and benefits being priced (for example, use of 3 years of complete data for hospice and non-hospice FFS-paid Part A and Part B claims from CY 2018 to CY 2020); (ii) as described in sections 2.4a through 2.4d, retrospective adjustments to the base data to allow for known changes that have taken place since the base data were incurred (for example, taking into account repricing to reflect fiscal year (FY) 2022 per diem payment rates and the FY 2022 Hospice Wage Index); and (iii) as described in section 2.5, prospective adjustments for changes that are anticipated to occur between the base data incurred period and the period being priced (for example, trending hospice and non-hospice FFS-paid claims to CY 2023).

The national monthly hospice capitation rates will be adjusted by two rating factors: an "area factor," as described in section 3, and a "monthly rating factor," as described in section 4. The national monthly hospice capitation rate will be adjusted for each county by a hospice-specific average geographic adjustment similar to the MA average geographic adjustment (area factor) to result in an adjusted monthly hospice capitation rate. Of note, beneficiary-specific risk adjustment will not be applied to the hospice capitation rate payment. Additionally, to better reflect the first month beneficiary experience in hospice, the national monthly hospice capitation rate will be adjusted by a monthly rating factor for the first month only, as described in section 4. The hospice capitation rate paid for the first month will vary based on the number of days of hospice benefit occurring in the first calendar month of a hospice stay in a three-tiered structure (days 1–6, 7–15, 16+).

The Month 1 rating factors used in development of the year-1 rates are the same as the 2022 rates: (i) 0.3400 for 1–6 days; (ii) 0.6400 for 7–15 days; and (iii) 1.003 for 16+ days. The key parameters and values for the year-1 rates are summarized in table 1a. The rates are shown in the last column gross of sequestration.

² CMS reviewed the need for a risk mitigation program and found the variation in FFS payments by stay month to be relatively low (see section 3.2 on credibility) because the majority of the FFS payments (approximately 92 percent) consist of per diem rates with a small range of values.

	Hospice Enrollment in Month 1	Average Monthly Service Days	Distribution of Stay Months	Monthly Rating Factor ¹	2023 Gross Monthly Base Rate
	1–6 Days	3.28	16.11%	0.340	\$1,879.05
Month 1	7–15 Days	10.49	11.73%	0.640	\$3,537.04
	16+ Days	22.67	11.25%	1.003	\$5,543.21
Month 1 Composite ²		11.02	39.09%	0.621	\$3,431.31
Month 2+		26.25	60.91%	1.000	\$5,526.63
CY 2023 Composite					
National Hospice		20.30	100.00%	0.852	\$4,707.51
Capitation Rate ³					

Table 1a. National Average Values for 2023 Capitation Rates, Year-1 Rates

The Month 1 rating factors used in development of the mature-year rates are as follows: (i) 0.3500 for 1–6 days; (ii) 0.6587 for 7–15 days; and (iii) 1.0324 for 16+ days. These rating factors yield Month 1 rates that are in range with the Month 1 rates developed for year-1.³ The key parameters and values for the mature-year rates are summarized in table 1b. Again, the rates are shown in the last column gross of sequestration.

Table 1b. National Average Values for 2023 Capitation Rates, Mature-year Rates

	Hospice Enrollment in Month 1	Average Monthly Service Days	Distribution of Stay Months	Monthly Rating Factor ¹	2023 Gross Monthly Base Rate
	1–6 Days	3.28	10.54%	0.3500	\$1,879.26
Month 1	7–15 Days	10.49	7.68%	0.6587	\$3,536.77
	16+ Days	22.67	7.36%	1.0324	\$5,543.29
Month 1 Composite ²	-	11.02	25.58%	0.6391	\$3,431.34
Month 2+		27.18	74.42%	1.0000	\$5,369.32
CY 2023 Composite					
National Hospice		23.05	100.00%	0.9077	\$4,873.62
Capitation Rate ³					

¹ Bold numbers are the monthly rating factors used.

First month hospice capitation payments will be made to participating MAOs in a lump sum retrospectively on a quarterly basis for all enrollees who have a first calendar month hospice experience. Consistent with current law, as applicable, the A/B capitation rate, beneficiary rebate amount, and monthly prescription drug payment will be paid prospectively for Month 1. For any future calendar month experience, a participating MAO will prospectively receive a flat hospice capitation rate, the beneficiary rebate amount, and the monthly prescription drug payment, if

¹ Bold numbers are the monthly rating factors used.

² Values are based on the distribution of stay months.

³ This amount represents the national hospice capitation base rate for year-1 rates.

² Values are based on the distribution of stay months.

³ This amount represents the national hospice capitation base rate for mature-year rates.

 $^{^3}$ Month 1 rates developed under year-1 and mature-year approaches are not identical because the monthly rating factor is rounded to four decimal places. Month 1, mature-year CBSA-level rates are different from the corresponding Month 1, year-1 rates by between -0.01 percent and +0.01 percent.

applicable, for an enrollee who continues under hospice care. For Months 2+, the monthly rating factor is 1.00, and the base rate gross of sequestration is \$5,526.63 for year-1 rates and \$5,369.32 for mature-year rates.

Overall, the hospice capitation rates are projected to be budget neutral; that is, for CY 2023, the total CY 2023 capitation amounts are projected to equal the aggregate estimated CY 2023 Medicare FFS payments, plus an administrative load. In other words, no discounts are applied to estimated CY 2023 Medicare FFS payments.

1.2. Key Changes from the CY 2022 Final Actuarial Methodology

On March 1, 2022, CMS released a memorandum titled CY 2023 Preliminary Hospice Capitation Payment Rate Actuarial Methodology for the Hospice Benefit Component of the MA VBID Model. Within the document is a section titled "Key Preliminary Updates from the CY 2022 Final Actuarial Methodology," which includes proposed changes to the data, as well as the methodology to be used in the development of the CY 2023 rates. Summarized below are the provisions from this section that are reflected in the final CY 2023 hospice rates.

- CMS plans to use mature-year Model experience in counties where the Hospice Benefit Component was offered in CY 2022 and to use year-1 Model experience in counties where the component will be offered for the first time in CY 2023. This method will still result in one ratebook for the Hospice Benefit Component; however, rates will be independently developed to reflect year-1 and mature-year rates depending on whether a plan benefit package (PBP) participated in a county offering the Hospice Benefit Component in CY 2022.
- The rates continue to be based on a 3-year experience period in the base data. For the CY 2023 rates, the experience period consists of CY 2018 through CY 2020.
- For CY 2023, CMS has repriced the CYs 2018–2020 historical hospice FFS-paid claims experience to CY 2022. The repricing of these claims uses the FY 2022 per diem payment rates for the four prospectively determined rate categories of hospice care—routine home care (RHC), continuous home care (CHC), inpatient respite care (IRC), and general inpatient care (GIP)—and the FY 2022 Hospice Wage Index. Also, consistent with the 2022 rates, the repricing will be based on the provider CBSA for IRC and GIP and on the place of residence for RHC and CHC. Repricing for CHC will be based on CHC units and the published FY 2022 hourly rate for CHC
- Consistent with the CY 2023 MA capitation rates, the tabulation of non-hospice claims excludes direct graduate medical education (DGME), indirect medical education (IME), and kidney acquisition costs (KACs). The DGME, IME, and KAC exclusion represents a sum of the three carve-out factors incorporated in the CY 2023 MA ratebook⁴, tabulated at the CBSA level and applied against non-hospice claim expenditures. The consolidated carve-out factors are included in the "Hospice AGA Summary" tab of the published databook for the CY 2023 Hospice Benefit Component, which can be found on the VBID Model website.

⁴ https://www.cms.gov/medicarehealth-plansmedicareadvtgspecratestatsratebooks-and-supporting-data/2023

- As stated in the FY 2022 Hospice Wage Index and Payment Rate Update Final Rule (CMS-1754-F),⁵ there were no changes in the mapping of counties to CBSAs from FY 2021 to FY 2022. Accordingly, the development of the CY 2023 VBID hospice rates at the CBSA level will be based on the same county-to-CBSA mappings as were the CY 2022 VBID hospice rates
- Based on 2018 Medicare cost report data, the FY 2022 labor shares of hospice payments have been revised from the FY 2021 payments. The updated labor shares are included in table 1 of the FY 2022 final hospice regulation and are reflected in the table below. The FY 2022 labor shares were used in the tabulation of the CY 2023 VBID hospice rates.

Table 2. Labor Shares of Hospice Payments

Description	FY 2021 Labor Shares	FY 2022 Labor Shares
Routine Home Care (Days 1–60)	68.71%	66.00%
Routine Home Care (Days 61+)	68.71%	66.00%
Continuous Home Care	68.71%	75.20%
Inpatient Respite Care	54.13%	61.00%
General Inpatient Care	64.01%	63.50%

1.3. Background: Payment Structure of the Current FFS Medicare Hospice Benefit

Hospice care is a holistic, comprehensive approach to treatment that recognizes that the impending death of an individual with terminal illness warrants a change in focus from curative care to palliative care for symptom management and relief of pain. Palliative care is at the core of hospice philosophy and care practices, and it is a critical component of the Medicare hospice benefit, with the goal of helping terminally ill individuals remain primarily in the home environment and continue life with minimal disruption to normal activities.⁶ A hospice facility uses an interdisciplinary approach to deliver medical, social, nursing, emotional, psychological, and spiritual services through a collaboration of professionals and other caregivers in an effort to make the beneficiary as physically and emotionally comfortable as possible. This beneficiary and family/caregiver-centered care for those who are terminally ill is supported through a per diem payment that allows for the provision of a bundle of comprehensive services.

42 CFR part 418, subpart G provides for a per diem payment—based on each day a qualified Medicare beneficiary is under hospice care (once the individual has elected it)—in one of four levels of care: RHC, CHC, GIP, or IRC. This per diem payment is to include all of the hospice services and items needed for the palliation and management of a beneficiary's terminal condition, as required by section 1861(dd)(1) of the Social Security Act (the Act). These four levels of hospice care are distinguished by the intensity and location of the services provided.

⁵ CMS. Medicare Program; FY 2022 Hospice Wage Index and Payment Rate Update and Hospice Quality Reporting Requirements (CMS-1754-F). Retrieved from https://www.govinfo.gov/content/pkg/FR-2021-08-04/pdf/2021-16311.pdf

⁶ Proposed Rule CMS-1714-P. "CMS FY 2020 Hospice Wage Index and Payment Rate Update and Hospice Quality Reporting Requirements." Retrieved from https://www.govinfo.gov/content/pkg/FR-2019-04-25/pdf/2019-08143.pdf

A CMS review of claims over a recent 10-year period shows that RHC, which is the basic level of care under the hospice benefit, remains the highest utilized level of care, accounting for an average of 97.6 percent of total hospice days; GIP accounts for 1.7 percent of total hospice days, CHC for 0.4 percent, and IRC for 0.3 percent. If, in the judgment of the hospice interdisciplinary team, the patient's symptoms cannot be effectively managed at home, then the patient is eligible for GIP, a more medically intense level of care. GIP must be provided in a Medicare-certified hospice freestanding facility, skilled nursing facility, or hospital, and its purpose is to ensure that any new or worsening symptoms are intensively addressed so that the beneficiary can return to his or her home and continue to receive RHC. Limited, short-term, intermittent IRC is also available because of the absence, or need for relief, of the family or other caregivers. Additionally, CHC can be provided during a period of crisis in which continuous care is required to achieve palliation or management of acute medical symptoms so that the individual can remain at home. For any given patient, the type of care can vary throughout the hospice stay as his or her needs change.

CMS has noted on multiple occasions that there has been little change in the hospice payment structure since the benefit's inception. Today, this original per diem payment structure remains largely the same, with some adjustments. A couple of these modifications are noted below:

- Beginning January 1, 2018, using the hospice payment reform authority under section 1814(i)(6) of the Act, Medicare changed how it pays for RHC. There are now two RHC base payment rates: a higher rate for days 1 to 60 and a lower rate for days 61 and beyond. Medicare also makes additional payments for registered nurse and social worker visits that are provided during the last 7 days of life, and these payments are made above and beyond the RHC per diem amount.
- Using the hospice payment reform authority under section 1814(i)(6) of the Act and under section III.A.3 of the FY 2022 hospice final rule "Medicare Program; FY 2022 Hospice Wage Index and Payment Rate Update" (CMS-1733-F), Medicare rebased the FY 2022 per diem payment rates for CHC, IRC, and GIP and reduced RHC payment amounts for FY 2022 in order to maintain overall budget neutrality. This rebasing was done to adequately cover the costs of providing higher-intensity levels of care—given that the costs of providing CHC, IRC, and GIP have been significantly higher than their payment rates, as highlighted in table 3. Notably, the rebasing also ensures that hospices have access to the providers needed to comply with hospice Conditions of Participation (CoPs) and that hospices promote patient access to all levels of care.

⁷ Final Rule CMS-1714-F. "Medicare Program; FY 2020 Hospice Wage Index and Payment Rate Update and Hospice Quality Reporting Requirements." Retrieved from https://www.govinfo.gov/content/pkg/FR-2020-08-06/pdf/2020-16583.pdf

Code	Description	FY 2021 Per Diem Payment Rates	FY 2022 Per Diem Payment Rates
651	Routine Home Care (Days 1–60)	\$199.25	\$203.40
651	Routine Home Care (Days 61+)	\$157.49	\$160.74
	Continuous Home Care	\$1,432.41/	\$1,462.52/
652	Full Rate = 24 hours of care	\$59.68 (hourly rate)	\$60.94 (hourly rate)
655	Inpatient Respite Care	\$461.09	\$473.75
656	General Inpatient Care	\$1,045.66	\$1,068.28

Table 3. Hospice Average Costs Per Day versus Gross Per Diem Payment Rates in FY 2021 and FY 20228

Further, to ensure that hospice care does not exceed the cost of conventional care, there are two annual limits to hospice payments: the inpatient cap and the aggregate cap. The hospice inpatient cap limits the total number of Medicare inpatient days (for both general inpatient and inpatient respite care) to no more than 20 percent of a hospice's total Medicare hospice days. Any excess reimbursement must be refunded by the hospice. The hospice aggregate cap limits the total aggregate payments that any individual hospice can receive in a cap year to an allowable amount, based on an annual per beneficiary cap amount and the number of beneficiaries served. Any actual Medicare payments in excess of the aggregate cap must be refunded by the hospice. CMS found that the inpatient cap repayment represents about 0.01 percent of hospice claims and that the aggregate cap repayment constitutes about 1 percent of claims.

While hospice care is a covered Medicare Part A benefit, the MA program—formerly known as Medicare+Choice—does not include risk or financial accountability for providing the Medicare hospice benefit as part of MA plan obligations. Specifically, the Balanced Budget Act of 1997 (BBA) provided that, should an individual enrolled in a Medicare+Choice program elect to receive hospice care from a particular hospice program, payment for that hospice care would be made to the hospice program by the Secretary of Health and Human Services (HHS), while payment for services not related to the individual's terminal illness and related conditions may be made by the Secretary of HHS to the Medicare+Choice organization or to the provider or supplier of the service. As codified at 42 CFR 422.320(c)(2) and (3), during the time that the hospice election is in effect, CMS' monthly capitation payment to the MAO is reduced to the sum of (i) an amount equal to the beneficiary rebate for the MA plan, as described in 42 CFR 422.304(a)(3), or a zero amount for plans with no beneficiary rebate, as described in 42 CFR 423.315 (if any). The

⁸ Final Rule CMS-1733-F. "Medicare Program; FY 2021 Hospice Wage Index and Payment Rate Update and Hospice Quality Reporting Requirements." Retrieved from https://www.govinfo.gov/content/pkg/FR-2021-08-04/pdf/2021-16311.pdf

⁹ Section 1852(a) of the Act carves hospice out of the services that MA plans must cover. See also H.R. 2015. Balanced Budget Act of 1997 (BBA). Retrieved from https://www.congress.gov/105/plaws/publ33/PLAW-105publ33.pdf

¹⁰ The specific statutory provisions that were added by the BBA and that address this issue include section 1852(a), which provides that MA plans do not cover hospice, and section 1853(h)(2), which provides the payment rules for hospice services offered to MA enrollees.

A/B capitation rate will be paid only if, as of the first of the month, an enrollee is not under hospice election status.

2. Rate Determination Process for the CY 2023 Hospice Capitation Rates under the Model

2.1. Introduction

This section describes the process used to develop the national hospice capitation rates for CY 2023. In developing these rates, CMS considered the following policy objectives:

- To the extent possible, maintain a simple, transparent, and clear payment structure and costneutral rates so that, for CY 2023, the aggregate 2023 capitation equals the aggregate estimated 2023 Medicare FFS payment (plus an administrative load);
- Continue to ensure the accuracy of rates to the extent possible while moving from a granular four-level per diem FFS payment structure, which automatically adjusts for length of stay and service intensity, to a monthly capitation rate, with capitation offering opportunities for improved quality management;
- Primarily measure accuracy on an aggregate basis by CBSA;
- To the extent possible and appropriate, develop rates consistent with the process by which MA benchmarks are prepared, following actuarial guidance and practices in developing the rates; and
- Align payment structure with policy objectives to (i) promote hospice enrollment early enough in the disease trajectory to allow delivery of the range of services necessary to promote comfort while also discouraging very short stays, when an enrollee with a terminal illness has little time to benefit from hospice services and after significant costs with acute medical care have often been incurred; and (ii) reduce the financial incentive surrounding very long stays that is present in the current FFS payment system, 11 to help ensure appropriate access to, and utilization of, the Medicare hospice benefit under the Model.

The basic rating structure under the Model is similar to the MA approach for setting benchmarks:

Monthly Capitation Payment = National Base Rate \times Monthly Factor X Area Factor

As further described in sections 3 and 4, the rating structure under the Hospice Benefit Component has just two rating factors: (i) the area factor—to account for all regional variation in claims to the extent possible; and (ii) the monthly rating factor—to better match capitation with the durational claim pattern. Under the Model component, the rating structure, which is detailed in this payment methodology, is as follows:

¹¹ Medicare Payment Advisory Commission (MedPAC). *Report to the Congress: Medicare Payment Policy*. Chapter 11: "Hospice Services." March 2022. Retrieved from https://www.medpac.gov/document/march-2022-report-to-the-congress-medicare-payment-policy/

```
Capitation Rate _{CBSA, Month \, 1} = (National \, Rate) \times (Month \, 1 \, Factor \, for \, Covered \, Days \, in \, Month \, 1) \times (Hospice \, Average \, Geographic \, Adjustment) \, _{CBSA, Month \, 1}
Capitation Rate _{CBSA, Month \, 2+} = (National \, Rate) \times (Month \, 2^+ \, Factor) \times (Hospice \, Average \, Geographic \, Adjustment) \, _{CBSA, Month \, 2+}
```

CMS considered other rating factors, ¹² but analysis showed that either they were not significant, after accounting for the area factor and monthly rating factor, or they were administratively too complex to implement. The area factor and monthly rating factor account for the following, all of which persist over years by area:

- Claim unit cost differences (for example, labor cost differences that vary by CBSA).
- Mix of services (for example, more use of intense hospice services such as CHC, GIP, and IRC and spending for non-hospice FFS-paid care).
- Mix of condition categories that are persistent in the experience (for example, in comparison to the national average, New York has a much higher proportion of beneficiaries who elect hospice with cancer conditions, and New Jersey has a much higher proportion of beneficiaries who elect hospice with dementia conditions).
- Stay month mix (that is, short, mid, and long stays in Month 1), in which the stay month reflects the calendar month of coverage for a beneficiary enrolled in Medicare.

In aggregate, of the FFS payments related to a hospice experience, 92.0 percent are for hospice FFS-paid claims, and 8.0 percent are for non-hospice FFS-paid claims. RHC represents the vast majority of all per diem amounts (97.6 percent) for hospice claims.

2.2. Process for Developing Rates

CMS followed a standard rate development process, which consisted of three parts:

- Base data appropriate to the population and benefits being priced.
- Retrospective adjustments to the base data to allow for known changes that have taken place since the base data were incurred.
- Prospective adjustments for changes that are anticipated to occur between the base data incurred period and the period being priced.

¹² The other rating factors identified as drivers of hospice and non-hospice FFS payments include (i) discharge status of hospice beneficiaries—that is, continue status (for those who continue from one month to the next), death status, or discharge status (for those who have a live discharge); (ii) terminal condition of a hospice beneficiary; (iii) aged versus disabled status; and (iv) dual versus non-dual status.

Table 4a provides an illustrative ¹³ development of the CY 2023 composite national hospice capitation rate for the year-1 rates. The CY 2023 rate prior to hospice provider caps is \$4,707.51, which is 2.8 percent higher than the corresponding value of \$4,578.69 for CY 2022.

Table 4a. 2023 National Hospice Capitation Composite Rate Development, Year-1 Rates

		2018	2019	2020

¹ Calculated as the simple average of CYs 2018–2020, consistent with the approach used in the MA ratebook development.

2.3. Base Data

The base data reflect 3 years of complete data for Part A and Part B claims from CY 2018 to CY 2020 (that is, 100 percent of Medicare final action hospice FFS-paid and non-hospice FFS-paid claims, as defined in section 1, for beneficiaries enrolled in the FFS program or in an MA plan). Because the Medicare hospice benefit does not cover Part D benefits, these were excluded in the national hospice capitation rate. It is important to note that the base data, which are derived from paid claims, reflect a net of the 2-percent sequestration reduction and do not include the hospice provider inpatient and aggregate caps.

To emulate the first year experience of MAOs newly offering the Hospice Benefit Component in CY 2023, the base data supporting the year-1 rates use only those hospice benefit periods that begin in each of the calendar years.

The base data supporting the mature-year rates consist of claims incurred during the historical period, including benefit periods that started during the prior year. For example, the mature-year base experience for CY 2018 uses benefit periods that started CY 2018 or earlier years.

2.4. Retrospective Adjustments

As described in greater detail below, CMS made three retrospective adjustments:

- Repricing of the hospice FFS-paid claims using the FY 2022 per diem payment rates for RHC, CHC, IRC, and GIP levels of care and the FY 2022 Hospice Wage Index (see section 2.4a).
- Recognizing the impact of the hospice provider inpatient and aggregate caps, which are not included in the claims data (see section 2.4c).
- Making an adjustment to the CY 2020 experience for estimated beneficiary-level claims that were incurred but not reflected in the base experience and for claims paid outside the claim system (see section 2.4d).

Additionally, the 2018–2020 trends in service day utilization and mix of levels of care were analyzed and were determined to have an insignificant trend, and therefore no adjustment was made (see section 2.4b).

2.4a. Repricing

CMS performed three steps to reprice the CYs 2018–2020 historical hospice FFS-paid claims experience to FY 2022:

Step 1: CMS repriced the data using the 2022 per diem payment rates by type of service (RHC days 1–60, RHC days 61+, CHC, GIP, and IRC) multiplied by a FY 2022 Hospice Wage Index adjustment and by the number of service days by stay month for each beneficiary within the base data. The 2022 Hospice Wage Index was based on the beneficiary's CBSA listed within CMS data.

Step 2: In addition to services covered by the standard per diem payment rates, CMS considered other features that were not accounted for in those rates, including service intensity add-ons, physician services covered under the hospice benefit but not offered by a hospice provider, and the fact that some hospice providers receive lower per diem payment rates for not reporting quality data. ¹⁴ To account for these features, CMS performed a second repricing, identical to the first except using per diem rates and wage indices specific to the incurred time period and the beneficiary's CBSA. The actual paid amount in the base data was then compared to this calculated paid amount to develop a true-up adjustment factor.

Step 3: CMS multiplied the calculated 2022 claims from Step 1 with the adjustment factor from Step 2 to recognize the features that were not accounted for in the FY 2022 per diem payment rates.

¹⁴ This adjustment factor also accounts for situations in which the hospice provider is in a CBSA that is different from the beneficiary's CBSA listed in the CMS data. Based on analysis of the beneficiary's CBSA and the provider location, approximately 4 percent of 2018 payments were to providers in States that were different from the beneficiary's location.

2.4b. Service Day Utilization and Intensity Adjustment

Using a methodology similar to that described in section 2.4b of the CY 2022 Final Actuarial Methodology, CMS studied the 2017–2020 mature-year experience for average number of service days and weighted per diem amounts, based on FY 2022 per diem rates.

The experience and trends are summarized in table 5. For purposes of analysis, the service days in column a, and the weighted per diem amounts in column g, were multiplied by each other to arrive at a composite value in column h.

A component of the analysis is a comparison of the 2017–2020 annual trend in the service days per stay month and the differences in the distribution of services by type. CMS determined that, for some items, the trends and differences for 2019–2020 were not consistent with those for 2017–2018 and 2018–2019. It is likely that these variations are due in part to the COVID-19 pandemic and will not be present to the same extent in payment year CY 2023. Accordingly, the following adjustments were made to the 2020 experience:

- Service days per stay month were changed from 23.00 to 23.27.
- Distribution of services for IRC was changed from 0.19 percent to 0.33 percent.
- Distribution of services for GIP was changed from 0.98 percent to 1.03 percent.
- Distribution of services for CHC was changed from 0.13 percent to 0.14 percent.
- To offset the adjustments made to IRC, GIP, and CHC, a value of 0.10 was subtracted from the distribution of services for RHC 1–60 and RHC 61+.

Use of the adjusted 2020 value yields the following adjustments applied to the base experience:

2018 experience: 0.37 percent
2019 experience: 0.15 percent

• 2020 experience: 1.71 percent

Finally, consistent with the VBID hospice actuarial methodology for the CY 2021 and CY 2022 rates, no additional trend will be applied from 2020 to 2023.

Table 5. Service Day Utilization and Intensity Adjustment, Mature-year Rates

2.4c. Recognition of the Hospice Provider Inpatient and Aggregate Caps 15

As noted in sections 1.3 and 2.3, any actual Medicare payments made to a hospice provider in excess of the inpatient cap and the aggregate cap must be refunded; these amounts were not reflected in the base data (that is, within the 100 percent of Medicare final action hospice claims for beneficiaries enrolled in the FFS program or in an MA plan). Below is a description of the two provider cap adjustments. The combined impact of both caps on the final rates for CY 2023 was a 0.9-percent reduction, weighted by stay months.

 $^{^{15}}$ A detailed description is available at $\underline{\text{https://www.cms.gov/Regulations-and-Guidance/Guidance/Manuals/Downloads/bp102c09.pdf}$

Hospice Provider Inpatient Cap

The hospice provider inpatient cap excess reimbursements for 2018–2020 were relatively small (\$4.38 million total) compared to the total hospice payment. However, these amounts were limited to seven hospice providers during that 3-year period, with three hospice providers responsible for 99.6 percent (\$4.36 million total) of the overpayment. CMS reduced the hospice FFS-paid claims in the three CBSAs that showed year-over-year consistency both in reimbursement amounts and in the identity of providers that had these recoveries. Furthermore, CMS reduced the experience by approximately 37.3 percent to adjust the mature experience to a first year basis (that is, experience supporting mature-year rates, as described in section 2.3). Table 6 shows the reductions by CBSA by year.

Table 6. Hospice Provider Inpatient Cap Experience Adjustment (Mature-year Rates)

CBSA	CBSA Description	2018	2019	2020	Total
22744–FL	Fort Lauderdale-Pompano Beach-				
22/ 44 -FL	Deerfield Beach, FL	57,643	101,369	17,598	176,610

32820-TN-MS-AR	Memphis, TN-MS-AR				
32020-11 \- 1 \i 13-Ai \	Wempins, TV-WIS-AIC	1,080,181	721,205		1,801,386
Total					
Total		1,487,849	822,574	431,020	2,741,443

Hospice Provider Aggregate Cap

To determine the hospice provider aggregate cap, CMS modeled the hospice aggregate cap calculation using the proportional approach at a provider level. Next, CMS allocated any calculated overpayment to beneficiaries using that provider based on hospice FFS payments by beneficiary. This approach allowed the allocation of the overpayments to beneficiary CBSAs. CMS calculated the overpayments as a percentage of hospice FFS-paid claims for Month 2+ and applied that reduction to all experience years for the given CBSA. This calculation is based on mature year experience supporting the mature-year rates, and it is appropriate for both mature-year and year-1 rates since the ratio of hospice claims to total claims is about the same for both cohorts.

Because the annual limit for the aggregate cap is not adjusted for regional labor cost differences and on average 66 percent of the per diem payment rates are adjusted for regional labor cost, CMS expected that areas with a higher Hospice Wage Index would have higher aggregate cap overpayments. However, since beneficiaries can seek hospice services outside of their home CBSAs, the Hospice Wage Index is not a perfect predictor of the aggregate cap recovery. Table 7 summarizes the distribution of CBSA count by the percentage of the hospice provider aggregate cap reduction to the Month 2+ hospice average geographic adjustment (AGA) (see section 3 for details on the hospice AGA). On an aggregate basis, the reduction is approximately 0.9 percent of hospice FFS payments (0.8 percent of total payments).

Table 7. Distribution of Hospice Provider Aggregate Cap Reductions to Month 2+ Hospice AGAs

Month 2+ Reduction	Count of CBSAs
<1%	432
1–3%	40
3–5%	6
>5%	4

2.4d. Claim Completion

To develop the hospice claim completion factors, CMS used historical experience consistent with the process used to develop claim completion factors for the MA program. Table 8 shows the claim completion multiplicative factors for both hospice and non-hospice FFS-paid claims for 2018–2020.

Table 8. Claim Completion Multiplicative Factors

Claim Type	2018	2019	2020
Hospice FFS-paid claims	1.0000	1.0000	1.0000
Non-hospice FFS-paid claims	1.0237	1.0231	1.0236

The multiplicative factors listed in table 7 account for outstanding claims from the National Claims History (NCH) base experience and provider reimbursements made outside the NCH, including cost report settlements, but these factors do not include hospice cap settlements.

2.5. Prospective Adjustments

Table 8 provides a high-level summary of prospective adjustments and respective assumptions.

Table 9. Summary of Prospective Adjustments and Respective Assumptions

	ry of Prospective Adjustments and Respective	1			
Prospective Adjustment	Note	Assumption			
Hospice FFS Payment					
2022 to 2023 Per Diem Change	Projection of Market Basket Update	FY 2022 to FY 2023, 2.7%;			
	Offset by Multifactor Productivity Adjustment.	FY 2023 to FY 2024, 2.9%

2018 to 2023	FFS USPCC—Non-ESRD Growth Rate from the MA 2023 Announcement	1.2665			
2019 to 2023		1.2204			
2020 to 2023		1.2740			
Other					
Administrative Expense Load	Claims Processing Cost Load	0.1093%			
Sequestration	Base data are net of sequestration. Repricing used per diem gross of sequestration. The 20				
	paid base data were divided by 0.98 to result in data that are gross of				
	sequestration. The sequestration multiplier for 2020 on-hospice FFS-paid				
	base data were divided by 0.9933 to reflect application of sequestration				
	reduction of 0.02 for January 2020 - April 2	2020 and 0.00 for May 2020 -			
	December 2020.				

Per Diem Trend from FY 2022 to CY 2023

After repricing the base data to 2022, CMS made an adjustment to the hospice FFS-paid claims to reflect an estimated increase in per diem payment rates from FY 2022 to FY 2023 (for the period January 1, 2023 to September 30, 2023) and from FY 2022 to FY 2023 (for the period October 1, 2023 to December 31, 2023). An annual trend of 2.7 percent for FY 2022 to FY 2023 and of 2.9 percent for FY 2023 to FY 2024 was applied, based on the CMS projection of the inpatient hospital market basket offset by the legislated multifactor productivity adjustment.

Trending Non-Hospice FFS-Paid Claims from the Experience Period to 2023

The FFS USPCC—non-ESRD trends that were presented in the CY 2023 Rate Announcement were used to trend the non-hospice FFS-paid claims from the 2018, 2019, and 2020 base data to CY 2023. Table 10 shows the trend rates by year.

Table 10. USPCC—Non-ESKD Trends		
Calendar Year	Trend	
2018 to 2019	3.78%	
2019 to 2020	-4.20%	
2020 to 2021	10.44%	
2021 to 2022	9.43%	
2022 to 2023	5.41%	

Table 10. USPCC—Non-ESRD Trends

Administrative Expense

The national hospice capitation rate includes the same administrative load, or clams processing costs, as a percentage of benefits as the MA ratebook. Table 11 demonstrates the development of the total hospice administrative load of 0.001093.

Hospice Non-Hospice FFS Total FFS **Payment** Payment Claims Processing Costs as Fraction of Benefits, Part A Part B Part A FY 2020. 0.001038 0.001038 0.002708 0.001093 Claims for Beneficiaries in Hospice Status as 92.10% 4.63% 3.27% 100.00% Percentage of Total for Year-1 Rates, 2018-2020

Table 11. Administrative Expense¹⁷

Sequestration

Consistent with MA capitation rates, the final hospice capitation rates under the Hospice Benefit Component are presented gross of sequestration in the CY 2023 hospice capitation ratebook for

¹⁶ CMS. "Announcement of Calendar Year (CY) 2023 Medicare Advantage (MA) Capitation Rates and Part C and Part D Payment Policies." April 4, 2022. Retrieved from https://www.cms.gov/files/document/2023-announcement.pdf

¹⁷ CMS. "Announcement of Calendar Year (CY) 2023 Medicare Advantage (MA) Capitation Rates and Part C and Part D Payment Policies." April 4, 2022. Retrieved from https://www.cms.gov/files/document/2023-announcement.pdf

the Model (that is, without the application of the 2-percent sequestration reduction). The following bullets describe how CMS handles sequestration in the rate development process:

- Hospice FFS-Paid Claims: CMS repriced the 2018–2020 experience using FY 2022 per diem payment rates by CBSA (see "Repricing" under section 2.4a). The per diem rates reflect the values in tables 5 and 6 of "Medicare Program; FY 2022 Hospice Wage Index and Payment Rate Update" (CMS-1733-F). This repricing resulted in an estimate of 2022 claims gross of sequestration.
- *Non-Hospice FFS-Paid Claims:* CMS used 2018–2020 non-hospice FFS-paid claims, which reflect the paid amount, net of sequestration. The projected non-hospice claims are divided by 0.98 to result in amounts that are gross of sequestration, consistent with the hospice claims.

3. Area Factor

3.1. Background and Development of the Area Factor

FFS-paid hospice per diem payment rates vary by CBSA,¹⁹ with the variation driven by the Hospice Wage Index. This Index is based on the CMS inpatient prospective payment system (IPPS) Hospital Wage Index, which measures the relative difference in hourly wages for certain health care professionals across areas based on an annual survey of hospitals. The Hospice Wage Index measures the difference in labor cost by CBSA. In total, there are 465 CBSAs in the FY 2022 Hospice Wage Index.

The Hospice Wage Index is applied to only the labor portion of the per diem payment rates, which varies by hospice service type. In aggregate, the labor portion accounts for about 66 percent of the hospice per diem rates. The non-hospice FFS-paid services are reimbursed using the prevailing area-specific CMS fee schedules. CMS developed 498 CBSA-State areas and then combined several of the smaller CBSAs for credibility purposes. The result was a final list of 482 areas (referred to as CBSAs in this document) for the area factor development.

The MA average geographic adjustment (AGA) is the area factor used to develop county-level benchmarks for enrollees in non-hospice status. The AGA reflects county variation in claim costs due to the cost of services under FFS Medicare, as well as variation in the utilization of comprehensive medical services. Table 12 shows the range of the Hospice Wage Index and the approximate range of the impact on the per diem payment rates for FY 2020 and FY 2022; the data in this table demonstrate why an area factor is needed.

¹⁸ Final Rule CMS-1733-F. "Medicare Program; FY 2022 Hospice Wage Index and Payment Rate Update." Retrieved from https://www.federalregister.gov/documents/2021/08/04/2021-16311/medicare-program-fy-2022-hospice-wage-index-and-payment-rate-update-hospice-conditions-of

¹⁹ CBSAs are collections of counties within States; in 48 CBSAs, they are collections of counties that cross State lines.

Those 120 House what of Brom Hanges					
	Hospice Wage Index		Approximate P	er Diem Range	
	FY 2020	FY 2022	FY 2020	FY 2022	
Lowest	0.3693	0.3602	0.6012	0.5786	
Highest	1.9126	1.9024	1.5713	1.5943	

Table 12. Hospice Wage Index and Per Diem Ranges

CMS considered several approaches for the area factor, including the following:

- Splitting an area factor for hospice FFS payment and non-hospice FFS payment, whereby hospice FFS-paid claims were adjusted by the Hospice Wage Index and non-hospice FFS-paid claims were adjusted by the MA AGA. There were several CBSAs with significant mismatches with regard to the 2020 hospice FFS-paid claims, and there was a weak correlation between (i) the MA AGA and the non-hospice FFS-paid claims by CBSA—due to the difference in the mix of services for comprehensive medical care, which the AGA is based on—and (ii) the non-hospice FFS-paid services used by hospice beneficiaries.
- Creating a three-part area factor for hospice FFS-paid claims to adjust for (i) the Hospice Wage Index area factor; (ii) the service intensity factor (that is, the mix of service days by area weighted by their relative per diem payment rate compared to the national average mix of services); and (iii) the relative length of stay by stay month. The three-part area factor was a good fit and showed correlation with hospice FFS-paid claims in combination with the non-hospice FFS-paid claims, which were adjusted using the AGA, but there was still a mismatch. As expected, the greatest variation occurred within CBSAs with 2,000 or fewer beneficiaries.

The approach that best accounted for all regional variation in claims was emulating the MA AGA, which is the ratio of the area-specific spending to the national average (referred to as the "hospice average geographic adjustment" or "hospice AGA" under the Model).

The general formula is as follows:

$$Hospice\ AGA_{CBSA}\ =\ \frac{Historical\ Claim\ Cost\ PMPM\ _{CBSA}}{Historical\ Claim\ Cost\ PMPM\ _{National}}$$

There are separate hospice AGAs for Month 1 and Month 2+ because of the differences in utilization of services and length of stay by CBSA. This distinction is captured in the following general formula:

$$Hospice\ AGA\ _{CBSA,\ Month}\ =\ \frac{Historical\ Claim\ Cost\ PMPM\ _{CBSA,\ Month}}{Historical\ Claim\ Cost\ PMPM\ _{National,\ Month}}$$

The 2023 hospice AGA is calculated using the 2023 projected cost for each of the 3 experience years. This calculation is represented by the following general formula:

$$2023\ Hospice\ AGA_{CBSA,\ Year,\ Mont\ h} = \frac{2023\ Projected\ Cost\ PMPM_{CBSA,\ Year,\ Mont\ h}}{2023\ Projected\ Cost\ PMPM_{National\ ,\ Year,\ Mont\ h}}$$

The Month 1 hospice AGA is adjusted to account for the difference in the mix of stay months by rating tier between the CBSA and the national distribution. The factor used to account for this difference is termed the "Month 1 Hospice AGA Tier Adjustment" (see section 4 for more detail). The formula for Month 1 is shown below:

```
Adjusted\ Hospice\ AGA\ _{CBSA,Year\ ,Mont\ h}\ =\ \frac{2023\ Hospice\ AGA\ _{CBSA,Year\ ,Mont\ h}\ 1}{Month\ 1\ Hospice\ AGA\ Tier\ Adjustment_{National\ ,Year\ ,Mont\ h}}
```

The Month 2+ hospice AGA is adjusted to recognize the impact by CBSA of the hospice provider inpatient and aggregate caps (see section 2.4 c for more detail). The formula for Month 2+ is shown below:

```
Adjusted Hospice AGA CBSA, Year, Month 2+ = 2023 Hospice AGA CBSA, Year, Month 2+ × Hospice Provider Cap Adjustment CBSA
```

The 2023 hospice AGA is the average of the three yearly hospice AGAs:

```
2022 Hospice AGA <sub>CBSA, Month</sub> = Average (2023 Hospice AGA <sub>CBSA, 2018 Month</sub>, 2023 Hospice AGA <sub>CBSA, 2019 Month</sub>, 2023 Hospice AGA <sub>CBSA, 2019 Month</sub>)
```

3.2. Credibility for the Core-Based Statistical Area (CBSA)-Level Experience

Consistent with the credibility standard used in the 2022 rates, the full credibility threshold in 2023 VBID hospice rates was set at 230 stay months. Please refer to section 3.2 of the 2022 VBID Hospice Actuarial Memorandum for demonstration of the full credibility threshold.

Partial Credibility

Consistent with methodology used in development of the 2022 rate, CMS used two approaches to address CBSAs with insufficient stay months to be 100 percent credible. The first was to combine low-volume CBSAs with adjacent CBSAs that have a similar Hospice Wage Index and similar historical utilization and cost. The second was specific to low-volume CBSAs without adjacent CBSAs—Guam, the U.S. Virgin Islands, American Samoa, and the Northern Mariana Islands. For these four areas, CMS used a partial credibility approach. For CBSAs with a Hospice Wage Index (the Virgin Islands and Guam), we credibility weighted the year-by-year tier-mix-adjusted Month 1²⁰ and Month 2+ hospice AGAs with the Hospice Wage Index area factor for the CBSA. The 2023 hospice AGA for these two CBSAs is the average of the credibility-adjusted factors. Since American Samoa and the Northern Mariana Islands do not have a Hospice Wage Index, any historical experience (there was none for the Northern Mariana Islands) was credibility weighted with the national Hospice Wage Index area factor, which is 1.000.

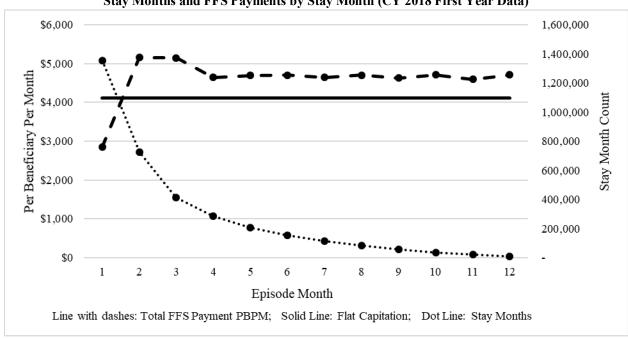

²⁰ For details on the Month 1 tier adjustment, see section 4.2.

4. Monthly Rating Factor

4.1. Background and Development of the Monthly Rating Factor

This section describes the monthly rating factor, which is applied to the base rate to adjust the capitation payment for the stay month. The purpose of the monthly rating factor is to create the best possible fit of monthly capitation payments to historical claims within the objectives for the Model.

The following chart shows why the monthly rating factor is needed. The dotted line shows the FFS payment pattern by stay month for CY 2018 for stays that started in 2018; Month 1 is low, driven by the average mid-month entry and the large number of short stays, while Months 2 and 3 are higher due to the higher per diem rate for RHC days 1–60 and the relatively level FFS payment for Months 4+. The purpose of the monthly rating factor is to improve the match of the hospice capitation rate line with the FFS payment line.

Stay Months and FFS Payments by Stay Month (CY 2018 First Year Data)

This chart also highlights the following:

- The dashed line shows the concentration of stay months in the first few months (39 percent of the total stay months occur in the first month and 72 percent in the first 3 months).
- The solid line is a "flat" capitation, which represents the average stay month FFS payment over all months and serves as a reference. A flat capitation would significantly overpay relative to the FFS per diem payment methodology in Month 1 and would underpay in Months 2 and 3.

In recognition of the variation in FFS payments across months within a hospice election period, CMS developed a methodology to determine the Month 1 capitation payment based on the actual days that a beneficiary is enrolled in hospice in Month 1.

For the first month only, the monthly hospice capitation rate that will be paid will have an adjustment (that is, the monthly rating factor) applied to better reflect actual beneficiary experience (in combination with the area factor discussed in section 3). The hospice capitation rate paid for the first month will vary based on the number of days of hospice benefit that occur in the first calendar month of a hospice stay, split into three tiers, as shown in table 13:

Table 13. Month 1 Rating Factors, Year-1 Rates

Days in Month 1	Monthly Rating Factor	Gross Monthly Base Rate ¹
1–6 Days	0.340	\$1,879.05
7–15 Days	0.640	\$3,537.04
16+ Days	1.003	\$5,543.21

¹ Gross of sequestration

The day count is equal to the hospice discharge date (or the last day of the month if there is no discharge) minus the enrollment date plus one. If there is more than one stay month in Month 1, the days in hospice will be added together to determine rate tier.

The change in 16+ days monthly rating factor from the 2022 rates to the 2023 rates is due to a change in the aggregate distribution of stay months resulting from replacement of 2017 experience with 2020 experience in the base data.

First month payments will be made in a lump sum retrospectively to participating MAOs on a quarterly basis for all enrollees who have first-calendar-month hospice experience.

For Months 2+, the monthly rating factor is 1.00, and the base rate is \$5,375.83 (gross of sequestration).

4.2. Month 1 Tier Adjustment

The rating tier factors shown in table 13 were developed using the national distribution of days in 2020. A difference in the distribution of Month 1 stay months by rate tier between the national and CBSA distributions would result in the appropriate rate not being produced by the Month 1 hospice AGA. To address this issue, CMS developed a Month 1 tier adjustment. Table 14 provides an example of how the Month 1 tier adjustment was calculated.

Table 14. Example of Month 1 Tier Factor Calculation for CBSA 48424—West Palm Beach—Boca Raton—Boyton Beach

Rate Tier: Days in Month 1	Monthly Rating Factor	National Distribution of 2020 Month 1 Stay Months	CBSA 48424 Distribution of 2020 Stay Months
1–6 Days	0.340	42.85%	50.63%
7–15 Days	0.640	29.68%	27.24%
16+ Days	1.003	27.47%	22.13%
Stay Month Weighted Composite Factor (Month 1 Tier Distribution Factor)		0.6112	0.5684
Month 1 Hospice			
(CBSA Month 1 Tier Distribution	0.9301		

The following formula is used to develop the Month 1 tier distribution factors for year-1 rates:

$$\textit{Month 1 Tier Distribution Factor}_{\textit{CBSA},\textit{Year}} = \begin{bmatrix} 0.340 \\ 0.640 \\ 1.003 \end{bmatrix} x \begin{bmatrix} \textit{Tier 1 stay month \%} \\ \textit{Tier 2 stay month \%} \\ \textit{Tier 3 stay month \%} \end{bmatrix}_{\textit{CBSA},\textit{Year}}$$

The Month 1 tier adjustment is calculated as follows:

$$Month\ 1\ Hospice\ AGA\ Tier\ Adjustment\ _{CBSA,\ Year} = \frac{{\scriptstyle Month\ 1\ Tier\ Distribution\ Factor\ _{CBSA,\ Year}}}{{\scriptstyle Month\ 1\ Tier\ Distribution\ Factor\ _{National,\ Year}}}$$

The final adjusted Month 1 hospice AGA is calculated in the following way:

$$Adjusted\ Hospice\ AGA_{CBSA,\ Year,\ Month\ 1} = \frac{Hospice\ AGA_{CBSA,\ Year,\ Month\ 1}}{Month\ 1\ Hospice\ AGA\ Tier\ Adjustment\ _{CBSA,\ Year}}$$

4.3. Operational Rules

CMS built the operational rules of the "CY 2023 Request for Applications" for the Hospice Benefit Component (outlined in section 2.7) into the final pricing of Model payments. These operational rules include the following:

- No more than one hospice capitation will be paid for an enrollee for a given month. In the historical hospice experience, there are situations in which a beneficiary dis-enrolls and reenrolls in the same month. For purposes of pricing, CMS concatenated these stay months in calculating the capitation rates.
- For Month 1 (that is, the first month in which a hospice election occurs), the sum of the days that a beneficiary is enrolled in that month will be used to determine which Month 1 tier rate will be paid. For purposes of pricing, CMS reviewed the live discharges and re-enrollments within Month 1 and concatenated these stay months in attributing the correct Month 1 tier.
