HEALTH

Americans Blame Obesity on Willpower, Despite Evidence It's Genetic

By GINA KOLATA NOV. 1, 2016

Growing Awareness of Risks of Obesity

- 86% view obesity as a very high risk to a person's overall health and
- 83% of Americans report that obesity is a very serious health problem
 - Obesity and cancer tie as the top 2 most often cited serious health problems
 - More Americans consider obesity a serious health problem than alcohol and drug abuse, diabetes, heart disease, mental illness and HIV/AIDS
 - But, few recognize the link between obesity and other conditions like infertility and joint disease

State of Denial

- Only about half of Americans consider themselves to be overweight (47%), significantly less than the numbers reported by CDC
- Most of those who meet the BMI criteria for obesity consider themselves to be overweight, but not obese (89%)
- Four in 10 Americans who meet the BMI criteria for obesity have not talked with a doctor or health professional about their weight
