Transmittal 2221	**Date: January 18, 2019**
	Change Request 10414

Transmittal 2188, dated November 2, 2018, is being rescinded and replaced by Transmittal 2221, dated, January 18, 2019, to revise the file layout attachment; specifically, elements of the denial reason code and the field length for location 47. All other information remains the same.

SUBJECT: Fiscal Intermediary Standard System (FISS) Prepayment Review Report

I. SUMMARY OF CHANGES: Medicare contractors conduct prepayment review on Medicare providers by requesting and reviewing additional documentation to determine whether Medicare coverage criteria are met for certain claims. At times, these reviews will impact a provider financially. When this occurs, it is brought to the attention of the CMS. Thus, CMS needs to have awareness of all prepayment reviews being conducted by Medicare Contractors. Change Request (CR) 8175, transmittal 1186, created a flat file that could be uploaded to the Recovery Audit Contractors (RAC) Data Warehouse (DW) so that prepayment review information would be readily available to CMS. This CR updates the frequency and format of the existing flat file. This CR changes the frequency of the flat file to daily rather than monthly, and the format of the flat file will be updated to capture additional data elements as discussed during the CR 10608 Analysis and Design (A&D) calls.

For Medicare Administrative Contractors (MACs):
The Medicare Administrative Contractor is hereby advised that this constitutes technical direction as defined in your contract. CMS does not construe this as a change to the MAC Statement of Work. The contractor is not obligated to incur costs in excess of the amounts allotted in your contract unless and until specifically authorized by the Contracting Officer. If the contractor considers anything provided, as described above, to be outside the current scope of work, the contractor shall withhold performance on the part(s) in question and immediately notify the Contracting Officer, in writing or by e-mail, and request formal directions regarding continued performance requirements.

I. GENERAL INFORMATION

A. Background: Medicare contractors conduct prepayment review on Medicare providers by requesting and reviewing additional documentation to determine whether Medicare coverage criteria are met for certain claims. At times, these reviews will impact a provider financially. When this occurs, it is brought to the attention of the CMS. Thus, CMS needs to have awareness of all prepayment reviews being conducted by Medicare Contractors. CR 8175, transmittal 1186, created a flat file that could be uploaded to the Recovery Audit Contractors Data Warehouse (RACDW) so that prepayment review information would be readily available to CMS. Original Diagnosis Code Version Indicator	5	5	1-AN	R	9 for ICD-9 or 0 for ICD-10;	For all fields capturing ‘Original’ and ‘Final’ values, the SSMs do not capture the ‘Original’ and ‘Final’ values separately in the system. Instead there is a single field, for example the Diagnosis Code Version Indicator, and if there is a change to the value in that field it simply overlays the previous value. SSMs will still be able to populate the ‘Original’ and ‘Final’ values on the prepayment review report. When the claim is first included on the report,

						the value that is current at that time will be listed in the 'Original' field on the report. When the claim is finalized, the value that is current at that time will be listed in the 'Final' field on the report. FISS and MCS capture principal diagnosis code at the claim header level. VMS captures at the line level. FISS and MCS should just repeat the same code for every line. The same comment applies to all other fields in the layout which may be captured on the claim level by some of the shared systems but RACDW needs to track on the line level.
