I. GENERAL INFORMATION

A. Background:

HHS adopted the Phase III Council for Affordable Quality Healthcare (CAQH) Committee on Operating Rules for Information Exchange (CORE) EFT & ERA Operating Rule Set that must be implemented by January 1, 2014 under Patient Protection and Affordable Care Act of 2010. Health Insurance Portability and Accountability Act (HIPAA) amended the Act by adding Part C—Administrative Simplification—to Title XI of the Social Security Act, requiring the Secretary of the Department of Health and Human Services (HHS) (the Secretary) to adopt standards for certain transactions to enable health information to be exchanged more efficiently and to achieve greater uniformity in the transmission of health information. More recently, the National Committee on Vital and Health Statistics (NCVHS) reported to the Congress that the transition to Electronic Data Interchange (EDI) from paper has been slow and disappointing. Through the Affordable Care Act, Congress sought to promote implementation of electronic transactions and achieve cost reduction and efficiency improvements by creating more uniformity in the implementation of standard transactions. This was done by mandating the adoption of a set of operating rules for each of the HIPAA transactions. The Affordable Care Act defines operating rules and specifies the role of operating rules in relation to the standards.

This CR deals with the regular update in CAQH CORE defined code combinations per Operating Rule 360 - Uniform Use of Claim Adjustment Reason Codes and Remittance Advice Remark Codes (835) Rule.

CAQH CORE has published Code Combination version 3.0.3 on October 1, 2013. This update is based on July, 2013 Claim Adjustment Reason Code (CARC) and Remittance Advice Remark Code updates as posted at the WPC Web site.

For CARC and RARC updates go to http://www.wpc-edi.com/reference and for CAQH CORE defined code combination updates go to http://www.caqh.org/CORECodeCombinations.php .

NOTE: Per ACA mandate all health plans including Medicare must comply with CORE 360 Uniform Use of CARCs and RARCs (835) rule or CORE developed maximum set of CARC/RARC/Group Code for a minimum set of 4 Business Scenarios. Medicare can use any code combination if the business scenario is not

one of the 4 CORE defined business scenarios but for the 4 CORE defined business scenarios, Medicare must use the code combinations from the lists published by CAQH CORE. .

B. Policy: Medicare implements HIPAA transactions and related Operating Rules to be compliant.

version 3.0.3 October 1, 2013

Introduction

This list accompanies the Phase III CORE 360 Uniform Use of Claim Adjustment Reason Codes and Remittance Advice Remark Codes (835) Rule Version 3.0.0. Highlights from the rule requirements include:

- CORE is establishing a *minimum* set of CORE-defined Claim Adjustment/Denial Business Scenarios as defined in the rule and a *maximum* set of CORE-required CARC/RARC/CAGC and CARC/NCPDP Reject Code/CAGC[1] Combinations to convey detailed information about the payment adjustment or denial. This document specifies the maximum set of CORE-required CARC/RARC/CAGC and CARC/NCPDP Reject Code/CAGC Combinations. The specific Business Scenarios in the rule were selected as they represent some of the most confusing and high volume scenarios that are exchanged between health plans and providers. Identifying a *maximum* set of code combinations for use with these Business Scenarios was selected for similar reasons – to reduce confusion and drive industry approaches to a long-standing problem.

- When using the CORE-defined Business Scenarios, entities are not allowed to add to the code combinations associated with each Business Scenario as this set of CARC/RARC/CAGC and CARC/NCPDP Reject Code/CAGC Combinations represents a *maximum* set. The only exception to this maximum is when the respective code committees create a new code or adjust an existing code; then the new or adjusted code can be used immediately with the Business Scenarios and the CORE Process for Maintaining the CORE-defined Claim Adjustment Reason Code, Remittance Advice Remark Code & Claim Adjustment Group Code Combinations for updating the Code Combinations will review the ongoing use of these codes within the maximum set of codes for the Business Scenarios. (See §3.5 of the Phase III CORE 360 Uniform Use of CARC and RARC Codes (835) Rule Version 3.0.0.)

- When the specific CORE-required CARC/RARC/CAGC and CARC/NCPDP Reject Code/CAGC Combinations within a Business Scenario are not applicable to meet the health plan's business requirements in describing the payment adjustment or denial, the health plan is not required to use the combinations. Should a health plan want to create new Business Scenarios which do not conflict with the existing CORE-defined Business Scenarios, this rule does not prohibit that, but it is expected the health plan will send the new Scenarios for consideration in

- In the case that additional CARC/RARC/CAGC and CARC/NCPDP Reject Code/CAGC Combinations for an existing CORE-defined Business Scenario is needed beyond what is currently included in the maximum set, then such code combinations must be requested in accordance with the CORE process for updating the *CORE-required Code Combinations for CORE-defined Business Scenarios.doc*.

- Consistent with the v5010 X12 835 or the CARC definition itself, not all CARCs require a RARC. Therefore, any CARC in the CORE-required Code Combination tables may be used without the corresponding RARC, except for CARCs that require RARCs as specified by the v5010 X12 835 or the CARC definition itself.

- The pharmacy industry adjudicates claims differently than the medical sector of health care, both with regard to process as well as with regard to codes used in that process. The pharmacy industry adjudicates claims and reports the results in real time using the NCPDP Telecommunication Standard. Using the NCPDP Telecommunication Standard, pharmacies send a real time request and receive an immediate real time response from the processor. If the claim is rejected, the NCPDP Reject Codes must be used consistently and uniformly across all trading partners. Each NCPDP Reject Code is tied to a specific reason/field in the NCPDP Telecommunication standard. Agreement on the use of these Reject Codes allows the pharmacy to ensure all required data for real time adjudication is available. Once the adjudication process is completed, the processor then reports the final result of adjudication via a real time response which includes payment information, payment reductions, etc. If necessary, adjustments are reported on the v5010 X12 835 using an appropriate CARC code which the pharmacy industry has agreed upon. NCPDP has created a mapping document to tie claim response fields to CARC Codes in the v5010 X12 835. The reporting of a rejected claim in a v5010 X12 835 transaction occurs only rarely, given that the pharmacy already has the rejection information from the real time processing of the claim and the v5010 X12 835 does not require the subsequent reporting of a rejected claim. Any such reporting is based on non-real time claims processing and mutual trading partner agreement using the NCPDP Reject Codes combined with CARC 16. (See §2.2 of the Phase III CORE 360 Uniform Use of CARC and RARC Codes (835) Rule Version

Code Combinations for Business Scenarios #1, #2, #3: Retail Pharmacy

Retail Pharmacy uses approximately ten CARCs only when reporting a claim payment adjustment on a v5010 X12 835 except for CARC 16. CARC 16 is used if a reject is reported when the claim is not being processed in real time and trading partners agree that it is required or when the claim is not processed in real time.

Moving forward, these CARCs will be evaluated against the CORE Rules Work Group code combination evaluation criteria for inclusion in the CORE-defined Business Scenarios specific for Retail Pharmacy use, e.g., a new scenario could be Payment Made with Adjustments, and that would apply to pharmacy and medical.

Table 6-1				
Scenario #1: Additional Information Required – Missing/Invalid/Incomplete Documentation Refers to situations where additional documentation is needed from the billing provider or an ERA from a prior payer.				
Scenario #2: Missing/Invalid/Incomplete Data from Submitted Claim Refers to situations where additional data is needed from the billing provider for missing or invalid data on the submitted claim, e.g., an 837 or D.0.				
Scenario #3: Billed Service Not Covered by Health Plan Refers to situations where the billed service is not covered by the health plan.

Introduction

This list accompanies the Phase III CORE 360 Uniform Use of Claim Adjustment Reason Codes and Remittance Advice Remark Codes (835) Rule Version 3.0.0. Highlights from the rule requirements include:

- CORE is establishing a *minimum* set of CORE-defined Claim Adjustment/Denial Business Scenarios as defined in the rule and a *maximum* set of CORE-required CARC/RARC/CAGC and CARC/NCPDP Reject Code/CAGC[1] Combinations to convey detailed information about the payment adjustment or denial. This document specifies the maximum set of CORE-required CARC/RARC/CAGC and CARC/NCPDP Reject Code/CAGC Combinations. The specific Business Scenarios in the rule were selected as they represent some of the most confusing and high volume scenarios that are exchanged between health plans and providers. Identifying a *maximum* set of code combinations for use with these Business Scenarios was selected for similar reasons – to reduce
- When using the CORE-defined Business Scenarios, entities are not allowed to add to the code combinations associated with each Business Scenario as this set of CARC/RARC/CAGC and CARC/NCPDP Reject Code/CAGC Combinations represents a *maximum* set. The only exception to this maximum is when the respective code committees create a new code or adjust an existing code; then the new or adjusted code can be used immediately with the Business Scenarios and the CORE Process for Maintaining the CORE-defined Claim Adjustment Reason Code, Remittance Advice Remark Code & Claim Adjustment Group Code Combinations for updating the Code Combinations will review the ongoing use of these codes within the maximum set of codes for the Business Scenarios. (See §3.5 of the Phase III CORE 360 Uniform Use of CARC and RARC Codes (835) Rule Version 3.0.0.)

- When the specific CORE-required CARC/RARC/CAGC and CARC/NCPDP Reject Code/CAGC Combinations within a Business Scenario are not applicable to meet the health plan's business requirements in describing the payment adjustment or denial, the health plan is not required to use the combinations. Should a health plan want to create new Business Scenarios which do not conflict with the existing CORE-defined Business Scenarios, this rule does not prohibit that, but it is expected the health plan will send the new Scenarios for consideration in an updated rule.

- In the case that additional CARC/RARC/CAGC and CARC/NCPDP Reject Code/CAGC Combinations for an existing CORE-defined Business Scenario is needed beyond what is currently included in the maximum set, then such code combinations must be requested in accordance with the CORE process for updating the *CORE-required Code Combinations for CORE-defined Business Scenarios.doc.*

- Consistent with the v5010 X12 835 or the CARC definition itself, not all CARCs require a RARC. Therefore, any CARC in the CORE-required Code Combination tables may be used without the corresponding RARC, except for CARCs that require RARCs as specified by the v5010 X12 835 or the CARC definition itself.

- The pharmacy industry adjudicates claims differently than the medical sector of health care, both with regard to process as well as with regard to codes used in that process. The pharmacy industry adjudicates claims and reports the results in real time using the NCPDP Telecommunication Standard. Using the NCPDP Telecommunication Standard, pharmacies send a real time request and receive an immediate real time response from the processor. If the claim is rejected, the NCPDP Reject Codes must be used consistently and uniformly across all trading partners. Each NCPDP Reject Code is tied to a specific reason/field in the NCPDP Telecommunication standard. Agreement on the use of these Reject Codes allows the pharmacy to ensure all required data for real time adjudication is available. Once the adjudication process is completed, the processor then reports the final result of adjudication via a real time response which includes payment information, payment reductions, etc. If necessary, adjustments are reported on the v5010 X12 835 using an appropriate CARC code which the pharmacy industry has agreed upon. NCPDP has created a mapping document to tie claim response fields to CARC Codes in the v5010 X12 835. The reporting of a rejected claim in a v5010 X12 835 transaction occurs only rarely, given that the pharmacy already has the rejection information from the real time processing of the claim and the v5010 X12 835 does not require the subsequent reporting of a rejected claim. Any such reporting is based on non-real time claims processing and mutual trading partner agreement using the NCPDP Reject Codes combined with CARC 16. (See §2.2 of the Phase III CORE 360 Uniform Use of

[1] http://www.ncpdp.org/members/members_download.aspx. NCPDP Reject Codes are in Appendix A.

CORE-required Code Combinations for CORE-defined Business Scenarios
version 3.0.4 February 1, 2014

Code Combinations for Business Scenarios #1, #2, #3: Retail Pharmacy

Retail Pharmacy uses approximately ten CARCs only when reporting a claim payment adjustment on a v5010 X12 835 except for CARC 16. CARC 16 is used if a reject is reported when the claim is not being processed in real time and trading partners agree that it is required or when the claim is not processed in real time.

Moving forward, these CARCs will be evaluated against the CORE Rules Work Group code combination evaluation criteria for inclusion in the CORE-defined Business Scenarios specific for Retail Pharmacy use, e.g., a new scenario could be Payment Made with Adjustments, and that would apply to pharmacy and medical.

Table 6-1				
Scenario #1: Additional Information Required – Missing/Invalid/Incomplete Documentation Refers to situations where additional documentation is needed from the billing provider or an ERA from a prior payer.				
Scenario #2: Missing/Invalid/Incomplete Data from Submitted Claim Refers to situations where additional data is needed from the billing provider for missing or invalid data on the submitted claim, e.g., an 837 or D.0.				
Scenario #3: Billed Service Not Covered by Health Plan Refers to situations where the billed service is not covered by the health plan.
