

## **CMS 2008 Basic Stand Alone (BSA) Prescription Drug Events Public Use File (PUF)**

### **General Documentation**

#### **1. Overview of the PUF**

This release contains the Basic Stand Alone (BSA) Prescription Drug Events (PDE) Public Use File (PUF) named “*CMS 2008 BSA PDE PUF*” with information from 2008 Medicare prescription drug claims.<sup>1</sup> The *CMS 2008 BSA PDE PUF* is an event-level file in which each record is a claim incurred by a 5% sample of Medicare beneficiaries. There are some demographic and claim-related variables provided in this PUF as detailed below. However, as beneficiary identities are not provided, it is not possible to link claims that belong to the same beneficiary in the *CMS 2008 BSA PDE PUF*.

When the claim-related variables were selected for inclusion in this PUF, priority was given to the measures most commonly reported/studied in health services research. However, most variables could not be included in the *CMS 2008 BSA PDE PUF* because the inclusion of more information would increase the risk of identification of beneficiaries.

#### **2. Source Data for the PUF**

The *CMS 2008 BSA PDE PUF* originates from a 5% simple random sample of beneficiaries drawn (without replacement) from the 100% Beneficiary Summary File for reference year 2008. The sample that is used for the *CMS 2008 BSA PDE PUF* is *disjoint* from the existing 5% CMS research sample<sup>2</sup> in the sense that there is no overlap in terms of the beneficiaries in the *CMS 2008 BSA PDE PUF* and the 5% CMS research sample. It is also disjoint from the other *BSA PUFs* (i.e., CMS 2008 Inpatient Claims PUF, CMS 2008 DME Line Items PUF, and CMS 2008 Hospice Beneficiary PUF) that have been released so far. This property prevents users from linking data across multiple files for identification purposes.

The 100% Beneficiary Summary File is created annually and contains demographic, entitlement and enrollment data for beneficiaries

- a. who were documented as being alive for some part of the reference year of the Beneficiary Summary File, and
- b. who were entitled to Medicare benefits during the reference year, and
- c. who were enrolled in the Medicare Part A and/or Part B for at least one month in the reference year.

---

<sup>1</sup> Definition of 2008 in PDE file.

<sup>2</sup> [http://www.resdac.org/tools/TBs/TN-011\\_How5percentMedicarefilescreated\\_508.pdf](http://www.resdac.org/tools/TBs/TN-011_How5percentMedicarefilescreated_508.pdf)

The 5% sample of prescription drug events is created by collecting the prescription drug events for the beneficiaries in the 5% random sample of beneficiaries. The 5% random sample contains approximately 2.4 million beneficiaries. To create the *CMS 2008 BSA PDE PUF*, all claims that belong to those 2.4 million beneficiaries are collected.

As part of the PUF preparation steps, some claims are excluded/suppressed from the *CMS 2008 BSA PDE PUF*. The initial 5% sample of beneficiaries contains 2,392,893 beneficiaries. Out of the 2,392,893 beneficiaries, there are 1,265,691 beneficiaries with at least one prescription drug event, and the remaining 1,127,202 beneficiaries do not have any prescription drug events in 2008. To protect the privacy of Medicare beneficiaries, a total of 1,575,000 events incurred by 388,734 beneficiaries are suppressed from the PUF, leaving 50,325,988 events incurred by 1,264,083 beneficiaries in the *CMS 2008 BSA PDE PUF*. Note that suppressing an event may or may not exclude a beneficiary from the PUF. The exclusion of a beneficiary depends on whether or not the beneficiary has one or more additional events remaining in the PUF. Consequently, not all 388,734 beneficiaries are excluded. Table 1 below provides the number of prescription and the total drug cost for these prescription drug events.

Table 1: Suppression in CMS 2008 BSA PDE PUF

Category	Formula	Total Drug Cost <sup>(2)</sup> (\$)	Total Patient Pay (\$)	Number of Events
Initial 5% Sample <sup>(1)</sup>	(a)	3,433,556,329	568,573,800	51,900,988
Suppressed	(b)	186,185,238	31,004,195	1,575,000
<i>CMS 2008 BSA PDE PUF</i>	(c) =(a)-(b)	3,247,371,091	537,569,605	50,325,988

- (1) A number of events (4,379) are suppressed initially because of data anomalies, such as patient payment being greater than total drug cost.  
(2) The Medicare Payments provided in this table are computed using actual payment amounts from the PDE file.

### 3. Content of the PUF

The most important aspects of the *CMS 2008 BSA PDE PUF* are as follows:

- i. It contains prescription events for a simple random sample of 5% of the 2008 beneficiary population. Out of approximately 2.4 million beneficiaries in the 5% sample, about 1,265,691 had events, resulting in a PUF of 50,325,988 prescription drug events.
- ii. It contains 12 (twelve) analytic variables (in addition to a unique record key): Gender, age, generic drug name, drug strength and unit of strength, drug dose form, drug type, drug class, quantity dispensed, days supply, payment by patient, and total drug cost. Some of the variables have been aggregated or coarsened in order to protect individuals from identification while retaining the analytic value of the data.

- iii. An event for a sampled beneficiary is only included in the PUF if the combination of all 12 (twelve) variables is shared by at least eleven (11) events pertaining to at least eleven (11) beneficiaries in the population. For some combinations of values of the twelve (12) variables there are fewer than eleven (11) events in the PUF (e.g., only one or two events).
- iv. Events cannot be linked by beneficiary, and cannot be linked to any external data source by means of the claim ID. The claim ID is a cryptographic key specific to this PUF and not available elsewhere. The *CMS 2008 BSA PDE PUF* is sorted by this claim ID to ensure that the relative positions of each event in the PUF and in the original source data are totally uncorrelated.

#### **4. Analytic Variables of the PUF**

The *CMS 2008 PDE PUF* contains thirteen (13) variables: A primary record (i.e., event) key indexing the events and twelve (12) analytic variables, listed below. One of the analytic variables, strength of the drug, is provided in two pieces, (a) a numeric variable and (b) a text variable indicating the units. As they can be treated as one variable, there are eleven (11) rather than twelve (12) analytic variables, in addition to the claim ID.

- i. Gender (BENE\_SEX\_IDENT\_CD): The beneficiary's gender, (1) male or (2) female.
- ii. Age (BENE\_AGE\_CAT\_CD): The beneficiary's age, reported in six categories: (1) under 65, (2) 65 - 69, (3) 70 - 74, (4) 75-79, (5) 80-84, (6) 85 and older.
- iii. Drug name (PDE\_DRUG\_CD): This is a set of 1,022 possible codes, numbered 0 - 1,021. It identifies the drug name.
- iv. Drug strength and unit of strength (PDE\_DRUG\_STR\_CD and PDE\_DRUG\_STR\_UNITS): PDE\_DRUG\_STR\_CD is a set of 665 possible codes, numbered 0 – 664. It indicates the strength of the drug. PDE\_DRUG\_STR\_UNITS is a set of 46 possible codes, numbered 0 – 45. It indicates the unit of strength (milligrams, milliliters, etc.).
- v. Drug dose form (PDE\_DRUG\_DOSE\_CD): This is a set of 71 possible codes, numbered 0 – 70. It indicates the form of the drug, such as oral tablet, oral capsule, etc.
- vi. Drug class (PDE\_DRUG\_CLASS\_CD): This is a set of 28 possible codes, numbered 0 – 27. It indicates the class of the drug, such as cardiovascular medications, central nervous system medications, etc.

- vii. Quantity dispensed (PDE\_DRUG\_QTY\_DIS): The amount of drug that is dispensed. The amounts are rounded according to Table 2.
- viii. Days supply (PDE\_DRUG\_DAY\_SPLY\_CD): This is a set of 7 codes, numbered 1 – 7. It indicates the number of days that the drug is prescribed for. The values are categorized according to Table 3.
- ix. Total drug cost (PDE\_DRUG\_COST): The gross cost of the drug. The amounts are rounded according to Table 4. Note that a total drug cost amount between \$0 and \$4.99 is rounded to \$0 according to the rounding rules.
- x. Payment by patient (PDE\_DRUG\_PAT\_PAY\_CD): This is a set of 3 possible codes, numbered 1 - 3. It indicates the amount paid by the patient for the drug: (1) patient paid \$0 for the drug (i.e., 0% of the drug cost), (2) patient made a partial payment (i.e., greater than 0% but less than 100% of the total drug cost), and (3) patient made a payment equal to the total drug cost (i.e., 100% of the drug cost).
- xi. Drug type code (PDE\_DRUG\_TYPE\_CD): This is a set of 3 possible codes, numbered 0 – 2. It indicates the type of a drug: (0) unknown, (1) brand name drug and (2) generic drug.

The detailed definitions and frequency distributions of these variables are provided in the Data Dictionary & Codebook together with this document.

There are two external data sources that are utilized in the creation of the *CMS 2008 BSA PDE PUF*: RxNorm<sup>3</sup> (available from the U.S National Library of Medicine, National Institutes of Health) and National Formulary<sup>4</sup> (available from the Department of Veterans Affairs). Both sources include information on drugs at the National Drug Code (NDC) level. NDCs are unique identifier for drugs mandate by the Food and Drug Administration (FDA). The initial 5% PDE file also contains a National Drug Code (NDC) for each event. An NDC code contains information on the manufacturer, generic name (or ingredients), strength, and dose form. In the *CMS 2008 BSA PDE PUF* these NDCs are converted into generic drug name, strength, dose form, and an indicator variable for brand name versus generic drug using the RxNorm database and assigned a major drug class from the Veterans Affairs National Drug File (VA-NDF) database.

---

<sup>3</sup> RxNorm is available at <http://www.nlm.nih.gov/research/umls/rxnorm/>. The version used for the *CMS 2008 BSA PDE PUF* is the October 2010 Release:

[http://www.nlm.nih.gov/research/umls/rxnorm/docs/2010/rxnorm\\_releasenotes\\_full\\_10042010.html](http://www.nlm.nih.gov/research/umls/rxnorm/docs/2010/rxnorm_releasenotes_full_10042010.html)

<sup>4</sup> National Formulary is available at <http://www.pbm.va.gov/NationalFormulary.aspx>.

An NDC code in the 5% PDE file may or may not exist in RxNorm or VA-NDF. When an NDC code is not found in RxNorm, the variables that define the drug (name, strength, dose form, etc.) are set to missing. Similarly, when an NDC is not found in VA-NDF, the class of the drug is set to missing. Table 5 shows the summary statistics: drug codes for approximately 2% of the events could not be found in RxNorm and VA-NDF. Hence, all but drug class information is available for close to 98% of the events in the *CMS 2008 BSA PDE PUF*. However, for about 15% of the events the drug class information is not available.

## 5. Analytic Utility of the PUF

Table 6 through Table 12 provide comparisons of the distribution for each variable included in the PUF. For each table three different distributions are provided. The column “Population” refers the population analogous to the column “Initial 5% Sample” of Medicare beneficiaries with at least one prescription drug event in 2008. The initial 5% sample consists of 51,900,988 events after preliminary cleaning steps (see Table 1 above). The last column “PUF” refers to the 50,325,988 events that remain in the PUF.

Table 13 through Table 16 present the distribution of events and beneficiaries in the PUF by gender, age and number of months in 2008 for which the beneficiary was enrolled in Part D of Medicare. By comparing number of events and number of beneficiaries in corresponding cells in the two tables, the user can compare the frequency of prescription drug events per beneficiary per month for beneficiaries with low months of enrollment and for beneficiaries for a full year of enrollment. Note that the *CMS 2008 BSA PDE PUF* includes events for beneficiaries who were enrolled in Medicare Part D for less than a full year.

Table 17 provides the distribution of number of prescription drug events per beneficiary.

Table 18 provides the suppression rate and mean total drug cost calculated from the initial 5% sample file (using the actual values for total drug cost) and compares that to the mean total drug cost calculated from the PUF. The mean total drug cost in the *CMS 2008 BSA PDE PUF* might differ from the mean calculated from the initial 5% sample file because of suppression and/or rounding of the values according to Table 4. The difference between the two values of mean total drug cost tends to be higher for drugs with relatively high suppression rate or drugs for which the rounding of the total cost was in one particular direction.

Table 2: Rounding Rule for Quantity Dispensed

Value of Quantity Dispensed	Rounding rule
0 - 0.99	Set equal to 0
1 - 10	Round to the nearest multiple of 1
11 - 30	Round to the nearest multiple of 5
31 - 100	Round to the nearest multiple of 10
101 - 1,000	Round to the nearest multiple of 100
Greater than 1,000	Round to the nearest multiple of 1,000

Table 3: Categorization Rule for Days Supply

Value of Days Supply	Category
1 - 7	1
8 - 14	2
15 - 21	3
22 - 29	4
30 - 59	5
60 - 89	6
Greater than 89	7

Table 4: Rounding Rule for Total Drug Cost

Value of the variable (\$)	Rounding rule
0 - 100	Rounded to the nearest multiple of 10
101 - 1,000	Rounded to the nearest multiple of 50
1,001 - 10,000	Rounded to the nearest multiple of 1,000
Greater than 10,000	Rounded to the nearest multiple of 10,000

- (1) Note that a total drug cost amount between \$0 and \$4.99 is rounded to \$0 according to the rounding rules. Hence, the corresponding value for \$10 in the PUF is a value between \$5 and \$14.99 in the initial 5% sample file.

Table 5: Summary Statistics

Description	Number of Events in Initial 5% Sample	Percentage of Events in Initial 5% Sample (%)	Number of Events in PUF	Percentage of Events in PUF (%)
Drug available in RxNorm and VA-NDF	44,361,677	85.47	43,062,195	85.57
Drug available in RxNorm but not VA-NDF	6,407,438	12.35	6,143,973	12.21
Drug not available in RxNorm and VA-NDF	1,131,873	2.18	1,119,820	2.23
Total	51,900,988	100.00	50,325,988	100.00

Table 6: Distribution of Events by Gender

Gender	Population (%)	Initial 5% Sample (%)	PUF (%)
Male	35.223	35.550	35.279
Female	64.777	64.450	64.721

Note: Percentages may not add up to 100% due to rounding.

Table 7: Distribution of Events by Age Categories

Age	Population (%)	Initial 5% Sample (%)	PUF (%)
Under 65	22.793	22.810	22.852
65-69	16.496	16.490	16.491
70-74	16.897	16.832	16.845
75-79	15.246	15.164	15.152
80-84	15.674	15.644	15.641
85 and older	12.893	13.060	13.018

Note: Percentages may not add up to 100% due to rounding.

Table 8: Distribution of Events by Drug Classes

Drug Class	Population (%)	Initial 5% Sample (%)	PUF (%)
Unknown/Missing	14.412	14.526	14.433
Antidotes, Deterrents and Poison Control	0.043	0.049	0.043
Antihistamines	0.650	0.675	0.657
Antimicrobials	3.359	3.415	3.362
Antineoplastics	0.360	0.381	0.365
Antiparasitics	0.116	0.121	0.117
Autonomic Medications	0.959	0.986	0.969
Blood Products/Modifiers/Volume Expanders	2.926	2.908	2.921
Cardiovascular Medications	32.019	31.477	31.877
Central Nervous System Medications	16.505	16.808	16.580
Dental And Oral Agents, Topical	0.081	0.083	0.082
Dermatological Agents	1.411	1.498	1.430
Diagnostic Agents	0.000	0.000	0.000
Gastrointestinal Medications	4.746	4.699	4.735
Genitourinary Medications	0.599	0.609	0.602
Hormones/Synthetics/Modifiers	10.740	10.683	10.748
Immunological Agents	0.139	0.154	0.141
Irrigation/Dialysis Solutions	0.009	0.015	0.010
Musculoskeletal Medications	3.473	3.500	3.487
Nasal And Throat Agents, Topical	0.316	0.315	0.316
Ophthalmic Agents	1.989	1.979	1.987
Otic Agents	0.070	0.070	0.070
Pharmaceutical Aids/Reagents	0.001	0.004	0.001
Prosthetics/Supplies/Devices	0.024	0.027	0.026
Rectal, Local	0.026	0.029	0.027
Respiratory Tract Medications	3.033	2.989	3.018
Therapeutic Nutrients/Minerals/Electrolytes	1.803	1.802	1.803
Vitamins	0.191	0.199	0.190

Note: Percentages may not add up to 100% due to rounding.

Table 9: Distribution of Events by Days Supply

Days Supply	Population (%)	Initial 5% Sample (%)	PUF (%)
1 – 7 days	6.304	6.578	6.345
8 – 14 days	4.309	4.547	4.349
15 – 21 days	3.550	3.832	3.606
22 – 29 days	4.594	4.888	4.642
30 – 59 days	70.781	69.433	70.556
60 – 89 days	1.249	1.426	1.273
90 or more days	9.212	9.295	9.230

Note: Percentages may not add up to 100% due to rounding.

Table 10: Distribution of Events by Patient Pay

Patient Pay	Population (%)	Initial 5% Sample (%)	PUF (%)
Patient did not pay any amount	26.213	26.661	26.334
Patient paid an amount greater than \$0 but less than the total drug cost	61.870	61.181	61.721
Patient paid the total drug cost	11.917	12.158	11.946

Note: Percentages may not add up to 100% due to rounding.

Table 11: Distribution of Events by Drug Type

Drug Type	Population (%)	Initial 5% Sample (%)	PUF (%)
Unknown/Missing	2.238	2.181	2.225
Brand name	32.047	32.078	32.016
Generic name	65.715	65.741	65.759

Note: Percentages may not add up to 100% due to rounding.

Table 12: Distribution of Events by Drug Name

Drug Code	Drug Name	Population (%)	Initial 5% Sample (%)	PUF (%)
392	Metoprolol	3.081	2.990	3.055
553	Thyroxine	3.046	2.996	3.041
350	Lisinopril	2.833	2.747	2.815
518	Simvastatin	2.734	2.644	2.708
254	Furosemide	2.379	2.307	2.366
8	Acetaminophen / Hydrocodone	2.340	2.305	2.331
0	Unknown/Missing	2.238	2.181	2.225
36	Amlodipine	1.983	1.915	1.963

(1) Drug codes that are 100% suppressed (i.e., drug codes that do not appear in the CMS 2008 BSA PDE PUF) are not included in this table. Hence, the actual suppression rate for any drug code in this table is less than 100%.

(2) Mean Total Drug Cost in PUF and Mean Total Drug Cost in Initial 5% Sample are both weighted means. Mean Total Drug Cost in PUF is calculated by dividing total (rounded) drug cost in PUF by the number of events in PUF. Mean Total Drug Cost in Initial 5% Sample is calculated by dividing total actual (unrounded) Drug Cost in the initial 5% sample (not shown) by the number of events in the initial 5% sample (not shown) for each drug code. A number of events are suppressed initially because of data anomalies, such as patient payment being greater than total drug cost.

(3) "abs[ ]" stands for absolute value of the term inside the brackets.
