Populations

- Persons enrolled for Medicare coverage increased from 19.1 million in 1966 to a projected 52.3 million in 2013, a 174 percent increase. (I.1)
- On average, the number of Medicaid monthly enrollees in 2013 is estimated to be about 57.4 million, the largest group being children (27.9 million or 48.6 percent). (I.16)
- In 2010, 21 percent of the population was at some point enrolled in the Medicaid program. (I.18)
- Medicare enrollees with end-stage renal disease increased from 110.0 thousand in 1985 to 454.6 thousand in 2012, an increase of 313 percent. (I.5)
- Medicare State buy-ins have grown from about 2.8 million beneficiaries in 1975 to 8.7 million beneficiaries in 2012, an increase of about 211 percent. (I.19)

 By 2012, nearly 31.9 million Medicare enrollees had Part D drug coverage, 62.7 percent of all enrollees, and an additional 5.6 million had RDS. (I.10 & I.12)

Providers/Suppliers

- The number of inpatient hospital facilities decreased from 6,522 in December 1990 to 6,170 in December 2012. Total inpatient hospital beds have dropped from 32.8 beds per 1,000 enrolled in 1990 to 18.4 in 2012, a decrease of 44 percent. (II.1)
- In the past decade, the total number of Medicare certified beds in short-stay hospitals has decreased to about 787,000 in 2012 from 970,000 in 1990. The average number of short-stay hospital beds per 1,000 enrolled in 2012 is 15.6 down from 28.8 in 1990. (II.1)
- The number of skilled nursing facilities (SNFs) increased rapidly during the 1960s, decreased during the first half of the 1970s, generally increased thereafter to over 15,000 in the late 1990s, and remains currently at this level. (II.3 & II.4)
- The number of participating home health agencies has fluctuated considerably over the years, almost doubling in number from 1990 to almost 11,000 in 1997, when the Balanced Budget Act was passed. The number decreased sharply but has since stabilized, reaching 12,253 in 2012. (II.5 & II.6)

Populations

Information about persons covered by Medicare, Medicaid, or CHIP

For Medicare, statistics are based on persons enrolled for coverage. Historically, for Medicaid, recipient (beneficiary) counts were used as a surrogate of persons eligible for coverage, as well as for persons utilizing services. Current data systems now allow the reporting of total eligibles for Medicaid and for Children's Health Insurance Program (CHIP). Statistics are available by major program categories, by demographic and geographic variables, and as proportions of the U.S. population. Utilization data organized by persons served may be found in the Utilization section.

Utilization

Information about the use of health care services

Utilization information is organized by persons receiving services and alternately by services rendered. Measures of health care usage include: persons served, units of service (e.g., discharges, days of care, etc.), and dimensions of the services rendered (e.g., average length of stay, charge per person or per unit of service). These utilization measures are aggregated by program coverage categories, provider characteristics, type of service, and demographic and geographic variables.
